Options You Can Upgrade

Purpose of Guide

The purpose of this guide is to tell customers and Digital Services which options can be removed from their current system and used, internally or externally, in their Digital AlphaStation 400 Series system. Step-by-step instructions are provided for removing the options.

Options You Can Upgrade

The following options can be used with the Digital AlphaStation 400 Series system:

<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>RZ25L</td>
<td>535 MB 3.5&quot; SCSI</td>
</tr>
<tr>
<td>RZ26L</td>
<td>1.0 GB 3.5&quot; SCSI</td>
</tr>
<tr>
<td>RZ28</td>
<td>2.1 GB 3.5&quot; SCSI</td>
</tr>
<tr>
<td>TLZ06</td>
<td>4 GB 4 MM DAT drive</td>
</tr>
<tr>
<td>TZK11</td>
<td>2.0 GB QIC tape</td>
</tr>
<tr>
<td>RRD43</td>
<td>600 MB CD-ROM</td>
</tr>
</tbody>
</table>

### Warning

Attach an antistatic wrist strap before you begin this upgrade. As you remove options from your system, place them on an antistatic mat. Static discharge can cause irreparable damage to options modules.

Upgrading a DECpc AXP 150

Topics Covered in this Chapter

• Upgrading your system
• Removing drives
• Removing modules
• Completing the upgrade

Upgrade Procedure

Step 1: If Your System Has Factory-Installed Drives

If your Digital AlphaStation 400 Series system has factory-installed drives, you may need to change the SCSI IDs on the drives you are upgrading.

To display the SCSI ID settings of the drives in your DECpc AXP 150 system:

1. Enter the command to shut down the software and put the system in console mode following the instructions in your software documentation.
Upgrade Procedure

2. Enter `SHOW DEVICE` at the console prompt (>>>). A screen similar to the following appears:

```
>>> SHOW DEVICE

<table>
<thead>
<tr>
<th>BOOTDEV</th>
<th>ADDR</th>
<th>DEVTYP</th>
<th>RM/FX</th>
<th>DEVNAME</th>

<td>4.5d</td>
<td></td>
</tr>
</tbody>
</table>

This sample display shows an RZ25 drive set to SCSI ID 0, a T2K10 drive set to SCSI ID 2, and an RRD42 drive set to SCSI ID 4.

Write down the names of your system drives and SCSI ID settings here. You will need them for future use.

---

Step 2: Shut Down System

Turn off the system unit by pressing O on the On/Off switch on the front of the system unit.

**Caution:** After you turn off the system, wait 15 seconds before you unplug the power cord.

Step 3: Disconnect Cables

To disconnect the cables:

1. Disconnect all the cables from the back of the system unit.
2. Disconnect the power cord from the wall outlet and then from the system unit.
Step 4: Remove Outside Cover

To remove the outside cover:

1. Unlock the outside cover using the chassis key 1.
2. Loosen the two captive screws 2.
3. Slide the outside cover towards the rear of the system unit and remove it.

Figure 2–1 Removing the Outside Cover
Upgrade Procedure

Step 5: Remove Inside Cover

Note that the peripheral bay cover ① may not be installed in your system. It is installed only in older systems.

To remove the inside cover:

1. Remove the inside peripheral bay cover by inserting your finger into the circular hole ② and lifting the cover out.

2. Remove the two screws ③ securing the large inside cover to the chassis. Keep the screws in a safe place.

3. Insert your finger into the circular holes ④ on the larger inside cover, then slide it towards the front of the system unit and remove it.
Figure 2–2  Removing the Inside Covers
Upgrade Procedure

Step 6: Remove Front Peripheral Bay Bezel

To remove the front peripheral bay bezel:

1. Pull the bezel locking-latch 1 out until it stops.
2. Lift the front peripheral bay bezel from the bottom and then lift it out and off its hinges 2.

Figure 2–3 Removing the Front Peripheral Bay Bezel

2–6 Upgrading a DECpc AXP 150
Step 7: Identifying the Drive Bays

The following section describes how to identify the drive bays inside the system unit.

<table>
<thead>
<tr>
<th>Item</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Front diskette drive bay–Accepts 3.5-inch diskette drives</td>
</tr>
<tr>
<td>2</td>
<td>Front 5.25-inch drive bays–Accepts 5.25-inch removable media devices or 3.5-inch disk drive devices</td>
</tr>
<tr>
<td>3</td>
<td>Rear disk drive bay–Accepts 3.5-inch disk drives</td>
</tr>
</tbody>
</table>

Figure 2–4 System Drive Bays
Step 8: Remove SCSI Drive from Front Drive Bay

To remove the SCSI drive from the front drive bay:

1. Disconnect the power cable 1 and the data cable 2 from the back of the drive.
2. Use a flat-head screwdriver 3 to free the locking clips from the slots on the side of the drive bay.
3. Slide the drive forward and remove it from the drive bay.
4. Unscrew the extension brackets (3.5-inch drives only), slide rails, and grounding clips from the drive.
Upgrade Procedure

Figure 2–5 Removing a SCSI Drive from a Front Drive Bay
Upgrade Procedure

**Step 9: Remove Disk Drive from Rear Drive Bay**

To remove a disk drive from the rear drive bay:

1. Disconnect the power cable 1 and the data cable 2 from the back of the drive.
2. Use a flat-head screwdriver to unscrew the captive screw 3 securing the drive mounting bracket, if present, to the chassis.
3. Slide the drive forward to free the mounting bracket clips, if present, from their slots, then lift it and remove it from the drive bay.
4. Remove the disk drive from the mounting bracket or the chassis, by unscrewing the screws.
Upgrade Procedure

Figure 2–6  Removing a 3.5-Inch Drive from the Rear Drive Bay
Upgrade Procedure

Step 10: Disconnect SCSI Option Board Ribbon Cables

To remove the SCSI option board ribbon cables:

1. Disconnect the larger ribbon cable 1 and place it aside.
2. Disconnect the smaller ribbon cable 2 and place it aside.

Figure 2–7 Disconnecting the SCSI Option Board Ribbon Cables
Step 11: Remove Option Board

To remove an option board:

1. Remove the screw securing the option board to the chassis.

2. Carefully disconnect the option board from the connectors on the system module and remove it from the system.

Figure 2–8 Removing an Option Board
Upgrade Procedure

**Step 12: Set the SCSI IDs on the Drives**

If your Digital AlphaStation 400 Series system has a factory-installed disk drive, it is set to SCSI ID 0. Check the SCSI ID settings you noted earlier. If one of the drives you are upgrading is also set to SCSI ID 0, change that setting.

SCSI ID settings can be found in Appendix A.

**Step 13: Complete the Upgrade**

To complete the upgrade:

1. Follow the instructions in the Digital AlphaStation 400 Series User Information manual to install the options you have removed from your system and to complete the upgrade.

2. Update the customer service contract to the Digital AlphaStation 400 Series system.

**Step 14: Return Your System to Digital**

To return your system and any options that are not upgradeable to Digital:

1. Pack the system and options securely in packing material.

2. Attach the return-address label that was in your upgrade kit, and ship the package to Digital.
Upgrading a DEC 3000 Model 300/300L/300X/300LX

Topics Covered in This Chapter

- Upgrading your system
- Removing drives
- Completing the upgrade

Upgrade Procedure

Step 1: If Your System Has Factory-Installed Drives

If your AlphaStation 400 Series system has factory-installed drives, you may need to change the SCSI IDs on the drives you are upgrading.

To display the SCSI ID settings of the drives in your system:

1. Enter the command to shut down the software and put the system in console mode as described in your software documentation.
Upgrade Procedure

2. Enter `show device` at the console prompt (>>>). A screen similar to the following appears:

```
>>> show device
BOOTDEV ADDR DEVTYPE NUMBYTES RM/FX WP DEVNAM REV
ESA0 08-00-2B-2F-F8-E6, TENBT
DKA3000 A/3/0 DISK 535MB FX RZ25L 0900.
.HOSTID.A/7 INITR
```  

This sample display shows an RZ25L drive set to SCSI ID 3. Write down the names of your system drives and SCSI ID settings here. You will need them for future use.

**Step 2: Shut Down System**

Turn off the system unit by pressing O on the On/Off switch on the back of the system unit.

**Caution:** After you turn off the system, wait 15 seconds before you unplug the power cord.

**Step 3: Disconnect Cables**

Disconnect all the cables from the back of the system unit. Disconnect the power cord from the wall outlet and then from the system unit.
Upgrade Procedure

Step 4: Remove Cover

1. Remove the two Phillips screws on the right and left top corners of the system unit cover.

2. Place the system unit so that the back of the unit extends over the edge of a table or desk.

3. Place your thumbs on top of the two black rubber caps on the back of the system unit, and place your fingers under the cover’s bottom edge. Press with your thumbs, and, at the same time, pull up with your fingers to lift the cover.

![Diagram of screws and cover being removed](MLD-010720)
Upgrade Procedure

Hint: If you have difficulty opening the enclosure, you can use a tool to pry up the cover as shown here.

4. Pivot the cover on the tabs that run along the system unit’s front edge.
5. Push the system unit cover forward and away until it releases from the tabs.
6. Place the cover aside.

Step 5: Remove Fixed Disk Drives

1. Unlock the sliding latch from the locking post.
2. Disconnect the internal power and SCSI cables from the rear of the drive.
3. Lift the drive off the locking post and out of the chassis cutouts.
4. Remove the drive mounting bracket by removing the four screws that secure the mounting bracket to the drive.

5. Set the drives aside on an antistatic mat.

6. Put all the disconnected cables back into the system unit.
# Upgrade Procedure

## Step 6: Set the SCSI IDs on the Drives
If your AlphaStation 400 Series system has a factory-installed disk drive, it is set to SCSI ID 0. Check the SCSI ID settings you noted earlier. If one of the drives you are upgrading is also set to SCSI ID 0, change that setting.

Settings for drives can be found in Appendix A.

## Step 7: Complete the Upgrade
1. Instructions for installing options that you have removed from your system and completing the upgrade can be found in the AlphaStation 400 Series User Information.
2. Update the customer service contract to the AlphaStation 400 Series system.

## Step 8: Return Your System to Digital
To return your system and any options that are not upgradeable to Digital:
1. Pack the system and options securely in packing material.
2. Attach the return-address label that was in your upgrade kit, and ship the package to Digital.
Topics Covered in This Chapter

- Upgrading your system
- Removing drives
- Completing the upgrade

Upgrade Procedure

Step 1: If Your System Has Factory-Installed Drives

If your Digital AlphaStation 400 Series system has factory-installed drives, you may need to change the SCSI IDs on the drives you are upgrading.

To determine the SCSI ID settings on your drives:

1. Shut down your software following the instructions in your software documentation.

2. Enter the `show device` command at the console prompt ( 记事本 ) to display the SCSI address for each drive. A display similar to the following appears:
Upgrade Procedure

>>> show device

<table>
<thead>
<tr>
<th>BOOTDEV</th>
<th>ADDR</th>
<th>DEVTYPE</th>
<th>NUMBYTES</th>
<th>RM/FX</th>
<th>WP</th>
<th>DEVNAM</th>
<th>REV</th>
</tr>
</thead>
<tbody>
<tr>
<td>ESA0</td>
<td>08-00</td>
<td>12-00-9C</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>DKA0</td>
<td>A/0/0</td>
<td>DISK</td>
<td>426.25MB</td>
<td>FX</td>
<td></td>
<td>RZ25</td>
<td>0700</td>
</tr>
<tr>
<td>DKA400</td>
<td>A/1/0</td>
<td>DISK</td>
<td>426.25MB</td>

<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>..HOSTID..B/7</td>
<td>INITR</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

The SCSI address for each drive is indicated in the ADDR column, as shown above. The drive model is shown in the DEVNAM column. In this example, A/0/0 indicates an address of 0 on the SCSI A (internal device) bus for a RZ25, A/4/0 indicates an address of 4 on the SCSI-A bus for an RRD42, and so on.

Write down the drive names and SCSI addresses here for later reference.

Step 2: Shut Down System

Turn off the system unit by pressing 0 on the On/Off switch on the rear of the system unit.

**Caution:** After you turn off the system, wait 15 seconds before unplugging the power cord.

Step 3: Disconnect Cables

Disconnect all the cables from the back of the system unit.

Disconnect the power cord from the wall outlet and then from the system unit.

Step 4: Remove System Cover

Loosen the captive screw 1 on the back of the system unit. With one hand on each side, pull firmly on the cover to pull it towards the front of the system unit and lift it off 2.
Upgrade Procedure

Figure 4–1 Removing the System Cover
Upgrade Procedure

Step 5: Remove Removable Media Drive

1. Loosen the four screws holding the bracket in place and slide the bracket toward the back of the enclosure 1.

Figure 4–2   Loosening the Screws on the Bracket

2. Position the drive bracket on its side to remove the four screws that mount the drive to the bracket. Remove the drive from the bracket 2.

3. Remove the power cable connector attached to the drive 3.

4. Remove the SCSI signal cable connector from the drive 4.
Figure 4–3  Removing a Removable Media Device
**Upgrade Procedure**

**Step 6: Remove a Disk Drive**

1. Remove the SCSI signal cable from the drive ①.
2. Disconnect the power cable connector from the drives ②.
3. Press the retaining spring. Slide the drive toward the retaining spring and lift the drive out ③.

*Figure 4–4  Removing a Fixed Media Device*

**Step 7: Remove Mounting Brackets**

Remove the mounting bracket and rubber grommets from the fixed disk drive.

Set the drive aside on an antistatic mat.
Upgrade Procedure

Figure 4–5  Removing a Mounting Bracket

Step 8: Set SCSI IDs on Drives
If your Digital AlphaStation 400 Series system has a factory-installed disk drive, it is set to SCSI ID 0. Check the SCSI ID settings you noted earlier. If one of the drives you are upgrading is also set to SCSI ID 0, change that setting.

See Appendix A for the SCSI ID drive settings.

Step 9: Complete the Upgrade
1. Follow the instructions in the Digital AlphaStation 400 Series User Information to install the options you have removed from your system and to complete the upgrade.

2. Contact your Digital service representative to upgrade your hardware service contract.

Step 10: Return Your System to Digital
Return your system as follows:
1. Pack the system unit securely in packing material.

2. Attach the return-address label that came in the upgrade accessory kit.
Upgrading a DEC 3000 Model 500/500X AXP

Topics Covered in This Chapter

- Upgrading your system
- Removing drives
- Completing the upgrade

..HostID..A/7 INITR
..HostID..B/7 INITR

>>> The SCSI address for each drive is indicated in the ADDR column, as shown above. The drive model is shown in the DEVNAM column. In this example, A/1/0 indicates an address of 1 on the SCSI A (internal device) bus for an RZ25. A/4/0 indicates an address of 4 on the SCSI-A bus for an RRD42, and so on.

Write down the drive names and the SCSI addresses here for later reference.

Step 2: Shut Down System

Turn off the system unit by pressing 0 on the On/Off switch on the front of the system unit.

**Caution:** After you turn off the system, wait 15 seconds before unplugging the power cord.

Step 3: Disconnect Cables

Disconnect all the cables from the back of the system unit. Disconnect the power cord from the wall outlet and then from the system unit.

5–2 Upgrading a DEC 3000 Model 500/500X AXP
Step 4: Unlock Cover

Unlock the system cover, as shown.

Figure 5–1 Unlocking the System Cover
Upgrade Procedure

Step 5: Remove Cover

Remove the system cover by sliding it forward and lifting it off, as shown. Note that the cover must be removed before you can remove the front panel or either side panel.

Figure 5–2 Removing the System Cover
Step 6: Remove Right Panel

Remove the right side panel by pulling the tabs on the top edge away ① and lifting the bottom edge out of the track ②. Do not pull on the plastic part of the panel.

Figure 5–3 Removing the Right Side of the Panel
Upgrade Procedure

Step 7: Remove Front Panel

Remove the front panel by releasing the catches at the top 1. Pull the panel away 2 and unhook the panel bottom.

Figure 5–4 Removing the Front Panel
Step 8: Remove Removable Media Drive

1. Disconnect the SCSI and power cables from the system.

Figure 5–5 Disconnecting the System SCSI and Power Cables
Upgrade Procedure

2. Release the two thumbscrews and remove the drive bracket from the system.

Figure 5–6 Removing the Drive Bracket

3. Disconnect the SCSI and power cables from the drive and remove them from the bracket.
Upgrade Procedure

Figure 5–7 Location of Drive SCSI and Power Cables

![Diagram of Drive SCSI and Power Cables]
Upgrade Procedure

4. Remove the two screws on each side of the drive bracket that secure the drive.

Figure 5–8 Removing the Drive Bracket

5. Lift the drive out of the bracket.
Step 9: Remove Fixed Disk Drive

1. To remove a fixed disk drive, press the release latch 1 at the top of the drive, and slide the drive up and away from the system unit.

Figure 5–9 Removing a Fixed Disk Drive

2. Remove the power and SCSI cables from the drive.
Upgrade Procedure

Step 10: Remove Mounting Brackets

Remove the mounting bracket and rubber grommets from the fixed disk drive.

Set the drive aside on an antistatic mat.

Figure 5–10 Removing a Mounting Bracket

Step 11: Set SCSI IDs on Drives

If your Digital AlphaStation 400 Series system has a factory-installed disk drive, it is set to SCSI ID 0. Check the SCSI ID settings you noted earlier. If one of the drives you are upgrading is also set to SCSI ID 0, change that setting.

See Appendix A for the SCSI ID drive settings.

Step 12: Complete the Upgrade

1. Follow the instructions in the Digital AlphaStation 400 Series User Information to install the options you have removed from your system and to complete the upgrade.

2. Contact your Digital service representative to upgrade your hardware service contract.
### Step 13: Return Your System to Digital

Return your system as follows:

1. Pack the system unit securely in packing material.
2. Attach the return-address label that came in the upgrade accessory kit.
Topics Covered in This Chapter

- Upgrading your system
- Removing drives
- Completing the upgrade

Upgrade Procedure

Step 1: If Your System Has Factory-Installed Drives

If your Digital AlphaStation 400 Series system has factory-installed drives, you may need to change the SCSI IDs on the drives you are upgrading.

To determine the SCSI ID settings on your drives, follow these steps:

1. Shut down your system software following the instructions in your software documentation.

2. To show the drives and their SCSI ID settings, enter:
   
   ```
   >> SHOW CONFIG
   ```

   A screen similar to the following appears:

5-RX26 6-INITR

SCSI ID Numbers

This sample display shows an RX26 drive set to SCSI ID 5.

Write down your system drives and SCSI ID settings here. You will need them for future use.

Step 2: Shut Down System

Turn off the system unit by pressing O on the On/Off switch on the side of the system unit.

**Caution:** After you turn off the system, wait 15 seconds before unplugging the power cord.

Step 3: Disconnect Cables

Disconnect all the cables from the back of the system unit.

Disconnect the power cord from the wall outlet and then from the system unit.
Upgrade Procedure

Step 4: Remove System Cover

1. Press firmly on the latches located on the side of the system unit.
2. Push the latches in and up until the cover releases.
3. Pull the cover up and off.
Upgrade Procedure

Step 5: Remove Disk Drive

1. Locate the small metal clip attached to the disk mounting bracket.
2. Push in on the metal clip to unlock the bracket, then slide the drive away from the power supply to remove it from the system unit.
3. Disconnect the SCSI and power cables from the drive.
4. Remove the drive mounting bracket and clip by removing the four screws that secure the mounting bracket to the drive.

![Diagram of disk drive removal](MLO-010696)

Step 6: Set the SCSI IDs on the Drives

If your Digital AlphaStation 400 Series system has a factory-installed disk drive, it is set to SCSI ID 0. Check the SCSI ID settings you noted earlier. If one of the drives you are upgrading is also set to SCSI ID 0, change that setting.

SCSI ID settings for drives can be found in Appendix A.
Step 7: Complete the Upgrade

1. Instructions for installing options that you have removed from your VAXstation VLC and completing the upgrade can be found in the Digital AlphaStation 400 Series User Information.

2. Update the customer service contract to the Digital AlphaStation 400 Series system.

Step 8: Return Your VAXstation to Digital

To return your VAXstation and any options that are not upgradeable to Digital:

1. Pack the VAXstation and options securely in packing material.

2. Attach the return-address label that was in your upgrade kit, and ship the package to Digital.
Upgrading a VAXstation 4000 Model 60/90/90A

Topics Covered in This Chapter
- Upgrading your system
- Removing drives
- Completing the upgrade

Upgrade Procedure

Step 1: If Your System Has Factory-Installed Drives

If your Digital AlphaStation 400 Series system has factory-installed drives, you may need to change the SCSI IDs on the drives you are upgrading.

To determine the SCSI ID settings on your drives:

1. Shut down your software following the instructions in your software documentation.
2. Put the VAXstation into console mode by pressing the Halt button located behind the door on the front of the system unit.
3. Enter the SHOW CONFIG command.

A screen similar to the following appears:
Upgrade Procedure

>>> show config
KN4n-A Vn.n
08-00-2B-0A-7D-CB
32 MB

<table>
<thead>

</tbody>
</table>

This sample display shows an RZ24 drive set to SCSI ID 0 and RZ25 drive set to SCSI ID 3.
Write down your system drives and SCSI ID settings here. You will need them for future use.
Upgrade Procedure

Step 2: Shut Down System

Turn off the system unit by pressing O on the On/Off switch on the front of the system unit.

**Caution:** After you turn off the system, wait 15 seconds before unplugging the power cord.

Step 3: Disconnect Cables

Disconnect all the cables from the back of the system unit.

Disconnect the power cord from the wall outlet and then from the system unit.

Step 4: Remove System Cover

Release the latches on the right side. Then pull the cover up and away. You need to pull forcefully to release the retention devices.
Upgrade Procedure

**Step 5: Remove H-Bracket**

To remove the H-bracket from the VAXstation system unit:

1. Push in on the cantilever catch on the bracket (as shown) and lift the bracket straight up with the strap handle.

2. Disconnect the SCSI and power cables from the drives in the bracket.
Step 6: Remove Drives from the H-Bracket

To remove a drive from the H-bracket:

1. Press down on the latch on the front of the bracket.
2. Slide the drive forward until you can pull it up and out of the bracket.
3. Set the drive aside on an antistatic mat.
Upgrade Procedure

Step 7: Remove SPXgt Graphics Module

If your system has an SPXgt graphics module, you must remove it before you can remove the removable-media device from the system unit. If you do not have an SPXgt graphics module, go to Step 8.

Figure 7–1 SPXgt 24-Plane Graphics Module

To remove the graphics module:

1. Remove the plastic E-clip ① that holds the graphics module to the frame buffer. (See Figure 7–2).

2. Lift the frame buffer from the center connector ②, then free it from the ridge ③ on the disk drive H-bracket. Gently work the frame buffer free by pulling up from the center of the module.

3. Pull the frame buffer out of the RFI gasket (shown in Figure 7–1). The gasket will remain in place, held by the video connector bracket on the graphics module.
Figure 7–2 Removing the SPXgt 24-Plane Graphics Module
Step 8: Remove Removable-Media Bracket

To remove the removable-media bracket:

1. Disconnect the SCSI and power cables from the removable-media drive.

2. Push down the latch on the rear of the drive bracket and push the drive back until the front bezel clears the bezel opening in the system unit.

3. Release the two cantilever catches (shown) on the removable-media bracket and lift the bracket out of the system unit.
Step 9: Remove Drive from Bracket

To remove the drive from the bracket:

1. Hold down the locking latch and push the drive back to loosen it.

2. Spread apart the cantilever latches on the bracket and lift the drive out.

3. Set the drive aside on an antistatic mat.
Upgrade Procedure

**Step 10: Set the SCSI IDs on the Drives**

If your Digital AlphaStation 400 Series system has a factory-installed disk drive, it is set to SCSI ID 0. Check the SCSI ID settings you noted earlier. If one of the drives you are upgrading is also set to SCSI ID 0, change that setting.

SCSI-ID settings for drives can be found in Appendix A.

**Step 11: Complete the Upgrade**

1. Instructions for installing options that you have removed from your VAXstation and completing the upgrade can be found in the Digital AlphaStation 400 Series User Information.

2. Update the customer service contract to the Digital AlphaStation 400 Series.

**Step 12: Return Your VAXstation to Digital**

To return your VAXstation and any options that are not upgradeable to Digital:

1. Pack the VAXstation and options securely in packing material.

2. Attach the return-address label that was in your upgrade kit and ship the package to Digital.
Upgrade Procedure

Step 1: If Your System Has Factory-Installed Drives

If your Digital AlphaStation 400 Series system has factory-installed drives, you may need to change the SCSI IDs on the drives you are upgrading.

To display the SCSI ID settings of the drives in your DECstation:

1. Enter the command to shut down the software and put the system in console mode: `shutdown -h now`
Upgrade Procedure

2. Enter `cnfg 3` at the console prompt (`>>>`). A screen similar to the following appears:

```plaintext
>>> cnfg 3
3: KNO2 DEC Vn.n TCF0 (12 MB)
```

```
-----------------------------------------------------
DEV PID VID REV SCSI ID
-----------------------------------------------------
rz2 RZ24 (C) DEC 0700 DIR
rz5 RX26 (C) DEC 0700 SEQ
```

This sample display shows an RZ24 drive set to SCSI ID 2 and an RX26 drive set to SCSI ID 5.
Write down the names of your system drives and SCSI ID settings here. You will need them for future use.

---

**Step 2: Shut Down System**

Turn off the system unit by pressing O on the On/Off switch on the back of the system unit.

**Caution:** After you turn off the system, wait 15 seconds before you unplug the power cord.

**Step 3: Disconnect Cables**

Disconnect all the cables from the back of the system unit.
Disconnected the power cord from the wall outlet and then from the system unit.
Step 4:
Remove Cover

1. Remove the two Phillips screws on the right and left top corners of the system unit cover.

2. Place the system unit so that the back of the unit extends over the edge of a table or desk.

3. Place your thumbs on top of the two black rubber caps on the back of the system unit, and place your fingers under the cover’s bottom edge. Press with your thumbs, and, at the same time, pull up with your fingers to lift the cover.
Upgrade Procedure

Hint: If you have difficulty opening the enclosure, you can use a tool to pry up the cover as shown here.

4. Pivot the cover on the tabs that run along the system unit's front edge.
5. Push the system unit cover forward and away until it releases from the tabs.
6. Place the cover aside.
**Step 5: Remove Fixed Disk Drives**

1. Disconnect the drive SCSI and power cables from the system module.
2. Press down on the disk drive and unlock the sliding latch from the locking post.
3. Lift the drive off the locking post and out of the chassis cutouts.
4. Disconnect the power and SCSI cables from the drive.
5. Remove the drive mounting bracket by removing the four screws that secure the mounting bracket to the drive.
6. Set the drives aside on an antistatic mat.
7. Put all the disconnected cables back into the system unit.

**Step 6: Set the SCSI IDs on the Drives**

If your Digital AlphaStation 400 Series system has a factory-installed disk drive, it is set to SCSI ID 0. Check the SCSI ID settings you noted earlier. If one of the drives you are upgrading is also set to SCSI ID 0, change that setting.

SCSI ID settings for drives can be found in Appendix A.
Upgrade Procedure

Step 7: Complete the Upgrade

1. Instructions for installing options that you have removed from your DECstation and completing the upgrade can be found in the Digital AlphaStation 400 Series User Information.

2. Update the customer service contract to the Digital AlphaStation 400 Series system.

Step 8: Return Your DECstation to Digital

To return your DECstation and any options that are not upgradeable to Digital:

1. Pack the DECstation and options securely in packing material.

2. Attach the return-address label that was in your upgrade kit, and ship the package to Digital.
Upgrading a DECstation 5000
Model 120/125/133/150

Topics Covered in This Chapter
• Upgrading your system
• Removing drives
• Completing the upgrade

Upgrade Procedure

Step 1: If Your System Has Factory-Installed Drives

If your Digital AlphaStation 400 Series system has factory-installed drives, you may need to change the SCSI IDs on the drives you are upgrading.

To display the SCSI ID settings of the drives in your system:

1. Enter the command to shut down the software and put the system in console mode: `shutdown -h now`
2. Enter `cnfg 3` at the console prompt (>>>). A screen similar to the following appears:

```
>>> cnfg 3
3: KNO2 DEC Vn.n TCF0 (8 MB)
    (enet: 08-00-2b-30-14-df)
    (SCSI = 7)
----------------------------------------
    DEV PID VID REV SCSI ID
----------------------------------------
rz2 RZ24 (C) DEC DEC 0700 DIR
rz5 Rrd42 (C) DEC DEC 0700 CD-ROM
```

This sample display shows an RZ24 drive set to SCSI ID 2 and an RRD42 drive set to SCSI ID 5.

Write down the names of your system drives and SCSI ID settings here. You will need them for future use.

**Step 2: Shut Down System**

Turn off the system unit by pressing 0 on the On/Off switch on the back of the system unit.

**Caution:** After you turn off the system, wait 15 seconds before you unplug the power cord.

**Step 3: Disconnect Cables**

Disconnect all the cables from the back of the system unit. Disconnect the power cord from the wall outlet and then from the system unit.
Upgrade Procedure

Step 4:
Remove System Cover

1. Loosen the captive screw on the back of the system unit. This captive screw can be loosened but not removed.

2. Grasp each side of the cover with your hands, and pull the cover straight toward the front about 5.5 cm (2 inches). Pull the cover up and set it aside.
Upgrade Procedure

Step 5: Remove Front Drive Panel

1. Loosen the two captive screws that hold the front drive panel in place.

2. Loosen the two captive screws on the back of the drive bracket.

3. If there is a drive inside the bracket, disconnect the SCSI and power cables from the drive.

4. Pull up carefully from the back of the drive bracket. As you raise the end of the bracket, you can pull the disconnected ends of the cables through the cutout in the bracket.

5. Release the cables from the cable clamps on the inside of the front panel.

6. Set the front panel aside. Handle it carefully if it contains a drive.
Step 6: Remove Removable Media Drives

1. Loosen the captive screws on either side of the drive bracket.
2. Slide the drive out of the bracket and through the opening in the front panel.
3. Set the drive aside on an antistatic mat.

Step 7: Remove Fixed Disk Drives

1. Press down on the disk drive and unlock the sliding latch.
2. Lift the drive off the mounting post and out of the chassis cutouts.
3. Disconnect the power and SCSI cables from the drive. Pull on the SCSI cable connector flap to remove the connector.
4. Remove the drive mounting bracket by removing the four screws that secure the mounting bracket to the drive.
5. Set the drive aside on an antistatic mat.
6. Put all the disconnected ends of the cables back into the system unit.
Upgrade Procedure

Step 8: Set the SCSI IDs on the Drives
If your Digital AlphaStation 400 Series system has a factory-installed disk drive, it is set to SCSI ID 0. Check the SCSI ID settings you noted earlier. If one of the drives you are upgrading is also set to SCSI ID 0, change that setting.

SCSI ID settings for drives can be found in Appendix A.

Step 9: Complete the Upgrade
1. Instructions for installing options that you have removed from your DECstation and completing the upgrade can be found in the Digital AlphaStation 400 Series User Information.

2. Update the customer service contract to the Digital AlphaStation 400 Series system.

Step 10: Return Your DECstation to Digital
To return your DECstation and any options that are not upgradeable to Digital:

1. Pack the DECstation and options securely in packing material.

2. Attach the return-address label that was in your upgrade kit, and ship the package to Digital.
Upgrading a DECstation 5000 Model 200/240/260

Topics Covered in This Chapter

- Upgrading your system
- Completing the upgrade

External Options Only

You can only upgrade the expansion boxes connected to your DECstation 5000 Model 200/240/260 to the Digital AlphaStation Model 400 system.

Upgrade Procedure

Step 1: If Your System Has Factory-Installed Drives

If your Digital AlphaStation Model 400 system has factory-installed drives, you may need to change the SCSI IDs on the drives you are upgrading.

To display the SCSI ID settings of the drives in your expansion box:

1. Enter the command to shut down the software and put the system in console mode: `shutdown -h now`
2. Enter `cnfg 3` at the console prompt (```). A screen similar to the following appears:

```
>>> cnfg 3
3: KNO2 DEC Vn.n TCF0 (12 MB)
-----------------------------------------------------
DEV  PID  VID  REV  SCSI ID
-----------------------------------------------------
rz2  RZ24  (C) DEC  0700 DIR
rz5  RX26  (C) DEC  0700 SEQ
```

This sample display shows an RZ24 drive set to SCSI ID 2 and an RX26 drive set to SCSI ID 5.

Write down the names of your system drives and SCSI ID settings here. You will need them for future use.

### Step 2: Shut Down System

Turn off the system unit by pressing O on the On/Off switch on the back of the system unit.

**Caution:** After you turn off the system, wait 15 seconds before you unplug the power cord.

### Step 3: Disconnect Cables

Disconnect all the cables from the back of the system unit.

Disconnect the power cord from the wall outlet and then from the system unit.
Upgrade Procedure

Step 4: Set the SCSI IDs on the Drives

If your Digital AlphaStation Model 400 system has a factory-installed disk drive, it is set to SCSI ID 0. Check the SCSI ID settings you noted earlier. If one of the drives you are upgrading is also set to SCSI ID 0, change that setting.

Settings for drives can be found in the expansion box documentation.

Step 5: Complete the Upgrade

1. Follow the instructions in the Digital AlphaStation 400 Series User Information to complete the upgrade.
2. Update the customer service contract to the Digital AlphaStation Model 400 system.

Step 6: Return Your DECstation to Digital

To return your DECstation and any options that are not upgradeable to Digital:

1. Pack the DECstation and options securely in packing material.
2. Attach the return-address label that was in your upgrade kit, and ship the package to Digital.
No Options Can Be Upgraded

There are no options that you can remove from systems, such as a VAXstation I, VAXstation II, VAXstation 2000, VAXstation 3100, VAXstation 3200, or VAXstation 3500, and install in your Digital AlphaStation 400 Series system.

Upgrade Procedure

To upgrade your current system, follow the two steps listed below.

Step 1: Return Your System to Digital

Return your system and any options to Digital.
1. Pack the system and options securely in packing material.
2. Attach the return-address label that was in your upgrade kit and ship the package to Digital.

Step 2: Update Service Contract

After installing your new system, update the customer service contract to the Digital AlphaStation 400 Series system.
Setting a Unique SCSI Address

Each internal drive has a SCSI address that must be unique. If more than one drive is set to the same SCSI address, the system cannot communicate with the drives.

When your drive arrives from the factory, all SCSI jumpers may be attached so that they are not lost during shipment. If this is the case, the address is set to 7, and must be changed.

TURBOchannel modules and memory modules do not have SCSI addresses.

This appendix contains an illustration for each of the drives supported on the Digital AlphaStation 400 Series system.

Selecting SCSI ADDRESS

There are six possible SCSI ID settings (SCSI ID setting 7 is reserved for the controller). The following table shows the settings that Digital recommends.

<table>
<thead>
<tr>
<th>Drive Type</th>
<th>SCSI ID Setting</th>
</tr>
</thead>
<tbody>
<tr>
<td>Fixed disk drive</td>
<td>0,1,2,3</td>
</tr>
<tr>
<td>Compact disk drive</td>
<td>4</td>
</tr>
<tr>
<td>Tape or diskette drive</td>
<td>5</td>
</tr>
<tr>
<td>Tape or diskette drive</td>
<td>6</td>
</tr>
</tbody>
</table>
Changing the Setting

Follow these steps to change a SCSI ID setting:

**Jumpers:**

Jumpers are removable electrical connectors. Carefully remove or replace jumpers using tweezers or another small tool. Save any SCSI jumpers you remove; you may need them later.

**Switches:**

Carefully set the switches using a small pointed instrument, such as the tip of a ball point pen. Do not use a pencil to set the SCSI switches; graphite particles can damage switches.
Before using the TZK11 drive, configure the drive; that is, check the DADS jumper to make sure it is set for the desired operating system. The DADS jumper is the fifth jumper from the right side, and must be in place for both OpenVMS AXP and DEC OSF/1 AXP operating systems.
Mode (Parity) Jumper

The mode (parity) jumper allows the drive to work with your operating system. The jumper must be in place for both Open VMS AXP and DEC OSF/1 AXP operating systems.
Figure A–3 TLZ06/07 Tape Drive SCSI ID Settings

Switch 5 (mode) allows the drive to work with your operating system, and must be down for both OpenVMS AXP and DEC OSF/1 AXP operating systems.
