FCC NOTICE: This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference, in which case users will be required to correct the interference at their own expense.

This document is available on compact disc.

This document was prepared using VAX DOCUMENT, Version 2.1.

## Preface

### Audience

This guide is for anyone who is comfortable opening the DEC 3000 Model 500X AXP system unit to install internal options.

### Purpose of This Guide

This guide provides the following information for internal options:

- How to install
- How to test for successful installation
- How to use RRD42, RX26, TZK10, and TLZ06 drives
- Drive specifications

### Structure of This Guide

This guide is organized as follows:

<table>
<thead>
<tr>
<th>Designation</th>
<th>Contents</th>
</tr>
</thead>
<tbody>
<tr>
<td>Chapter 1</td>
<td>Overview of options, including a list of internal options and their locations in the system unit.</td>
</tr>
<tr>
<td>Chapter 2</td>
<td>What you need to do to prepare your system for adding one or more options, including shutting down software, checking system configurations, shutting down hardware, and removing panels.</td>
</tr>
<tr>
<td>Chapter 3</td>
<td>Information on the RRD42 compact disc drive, including a description of the drive, setting jumpers, installing the drive in the system unit, and using the drive. Drive specifications are also included.</td>
</tr>
<tr>
<td>Designation</td>
<td>Contents</td>
</tr>
<tr>
<td>-------------</td>
<td>----------</td>
</tr>
<tr>
<td>Chapter 4</td>
<td>Information on the RX26 diskette drive, including a description of the drive, setting switches, installing the drive in the system unit, and using the drive. Drive specifications are also included.</td>
</tr>
<tr>
<td>Chapter 5</td>
<td>Information on the TZK10 tape drive, including a description of the drive, setting jumpers, installing the drive in the system unit, and using the drive. Drive specifications are also included.</td>
</tr>
<tr>
<td>Chapter 6</td>
<td>Information on the TLZ06 tape drive, including a description of the drive, setting switches, installing the drive in the system unit, and using the drive. Drive specifications are also included.</td>
</tr>
<tr>
<td>Chapter 7</td>
<td>Information on the RZ25 fixed disk drive, including a description of the drive, setting jumpers, and installing the drive in the system unit. Drive specifications are also included.</td>
</tr>
<tr>
<td>Chapter 8</td>
<td>Information on the RZ26 fixed disk drive, including a description of the drive, setting jumpers, and installing the drive in the system unit. Drive specifications are also included.</td>
</tr>
<tr>
<td>Chapter 9</td>
<td>Information on memory modules, including how to determine which modules you need, installing them in and removing them from the system unit.</td>
</tr>
<tr>
<td>Chapter 10</td>
<td>Information on TURBOchannel options, including an overview of TURBOchannel and the system unit option positions, a description of available TURBOchannel options, and installing them in and removing them from the system unit.</td>
</tr>
<tr>
<td>Chapter 11</td>
<td>What you need to do to replace panels and confirm that options were installed correctly inside your system unit.</td>
</tr>
<tr>
<td>Chapter 12</td>
<td>A description of available external options for your system.</td>
</tr>
</tbody>
</table>
Two Ways To Add Options

There are two ways to add options inside the system unit: add the options yourself or have a Digital service representative add them.

If you choose to add the options, note that system preparation takes about 20 minutes, additions take about 10 to 15 minutes per option, and system restoration takes about 10 minutes, on the average.

What You Should Know Beforehand

The instructions in this guide assume you are prepared to open the system unit, disconnect and connect internal cables, and use antistatic precautions. You should be familiar with concepts such as SCSI addresses, and the following diagnostic test displays:

- System power-up messages
- Configuration displays resulting from the `show config`, `show memory`, and `show device console commands`

For more information on these diagnostic test displays, refer to the DEC 3000 Model 500X AXP Owner’s Guide. For more information on SCSI concepts, refer to Small Computer System Interface: An Overview, listed in Appendix A.

CAUTION: Option Damage

Improper addition of a drive or module could lead to damage and failure of that drive or module, or to damage of the system. The DEC 3000 Model 500X AXP system warranty may not cover such a failure.
The following conventions are used in this guide:

**show config**  
Words in this format indicate commands that you must enter exactly as shown. For example: Use the `show config` command.

**WARNING:**  
Warnings contain information to prevent personal injury. Read these carefully.

**CAUTION:**  
Cautions contain information to prevent damage to equipment or software. Read these carefully.

**IMPORTANT:**  
Important notations contain information to allow your system to work properly.

- **OpenVMS**  
  This designation represents the OpenVMS Alpha AXP operating system.

- **DEC OSF/1**  
  This designation represents the DEC OSF/1 Alpha AXP operating system.

- **Italics**  
  Italics are used for emphasis or to indicate the title of a manual.
The Software Product Description (SPD) is the official defining document for software products licensed by Digital Equipment Corporation, including third-party products licensed by Digital. An SPD describes all important functional characteristics of the software. The terms and conditions under which the corporation sells and licenses its software products identify SPDs as the documents that specify Digital's obligation under software warranty.

SPDs also describe a software product's system environment, and identify required and optional hardware and software. All information contained in the SPD is valid in the international marketplace.

For more information on the SPD for your operating system, please contact your Digital sales representative.
A number of options are available for the DEC 3000 Model 500X AXP system. Some, such as drives and modules, are internal options. Others, such as a printer or modem, are external options connected to the system by a cable.

This chapter lists and illustrates internal options for the DEC 3000 Model 500X AXP system and shows where to install them in the system unit. See Chapter 12 for information on external options.
Internal Options

Your DEC 3000 Model 500X AXP system can have the following internal options:

• RRD42 compact disc drive
• RX26 diskette drive
• TZK10 cartridge tape drive
• TLZ06 cassette tape drive
• RZ25 and RZ26 fixed disk drives
• Memory modules
• TURBOchannel option modules

These options are discussed in detail in Chapter 3 through Chapter 10 of this guide.

The previous list represents the internal options available with the first shipments of the DEC 3000 Model 500X AXP system. Additional options may be available at a later time.

Your system unit can hold up to two half-height removable-media drives, that is, drives from which the storage medium is removable (such as the RRD42, RX26, TZK10, or TLZ06 drives). To add more than two removable-media drives, you will need an expansion box. For more information on expansion boxes, see Chapter 12.

You can have up to four half-height fixed disk drives in the system unit.
Figure 1–1 shows some of the internal options you can add to the system unit.

**Figure 1–1 Internal Options You Can Add**

1. RRD42 Compact Disc Drive
2. RX26 Tape Drive
3. TZK10 Tape Drive
4. TLZ06 Tape Drive
5. RZ25 Fixed Disk Drive
6. RZ26 Fixed Disk Drive
7. Memory modules
8. TURBOchannel modules
Internal Options

**Location of Internal Options: Left Side and Front**

Figure 1–2 shows where to install the TURBOchannel modules ①, memory modules ②, and removable-media drives ③ inside the system unit. Note that Figure 1–2 shows the system unit with the system cover, side panels and front panel removed.

**Figure 1–2  Option Locations (Left Side and Front)**
Figure 1–3 shows where to install the fixed disk drives 1 and TURBOchannel modules 2 inside the system unit. Note that Figure 1–3 shows the system unit with the system cover, side panels and front panel removed.
Preparing to Add Internal Options

IMPORTANT: Read First

It is important to read this chapter before you install any of the internal options described in this guide.

Chapter Overview

This chapter covers the following information:

- Going to Console Mode
- Displaying the Configuration
- Shutting Down Hardware
- Removing Panels
- Using an Antistatic Wrist Strap
Going to Console Mode

### Going to Console Mode

**Backing Up Your Files**
If files are stored on a system disk, back them up following the instructions in your software documentation.

**Shut Down Software**
The procedure for shutting down your software will depend on whether or not your system is networked.

<table>
<thead>
<tr>
<th>If you are...</th>
<th>See your...</th>
</tr>
</thead>
<tbody>
<tr>
<td>Networked, or part of a cluster,</td>
<td>system manager.</td>
</tr>
<tr>
<td>Not networked, not part of a cluster,</td>
<td>software documentation.</td>
</tr>
<tr>
<td>Not sure whether you are networked,</td>
<td>system manager.</td>
</tr>
</tbody>
</table>
Going to Console Mode

**Press the Halt Button**

If you are not already in console mode (>>> prompt) after shutting down the software, put the system into console mode by pressing the halt button. The halt button is behind the door, as shown in Figure 2–1. The console prompt (>>>) should appear on the monitor.

**Figure 2–1  Halt Button**
Displaying the Configuration

show dev

Display

If you are adding one or more drives, enter the show dev command to show the drives installed in the system and their status. You should get a display similar to what is shown in Figure 2–2.

Figure 2–2  The show device Display

>>> .HostID.. A/6 INITR
>>> .HostID.. B/6 INITR

How to Read the show dev Display

You should see the SCSI address for each drive in the ADDR column, as shown in Figure 2–2. The drive model is shown in the DEVNAM column. In this example, A/3/0 indicates an address of 3 on the SCSI-A (internal device) bus for an RZ25 drive. B/6 indicates the initiator (SCSI controller) for the SCSI-B (external device) bus.

What You Need to Do

Record the information in the ADDR and DEVNAM columns for later reference. After adding a drive, you can compare the new system configuration with the previous one to make sure that all drives, including the ones you added, are present and functioning correctly.
Displaying the Configuration

If your display shows many lines with the same address in the ADDR column, two or more drives may have been installed with the same SCSI address, and you will need to change the SCSI address settings to ensure that each drive has a unique address.

The show mem Display

If you are adding or removing memory modules, enter the show mem command to display the amount of memory in the system.

Figure 2–3  The show memory Display

>>> show memory

DEC 3000 - M500 Memory: 64 Mbytes
-------------------------------------------
BANK #    MEMORY_SIZE    START_ADDRESS
--------    ----------    ------------
  0          032 Mbytes  0x00000000

  6          000 Mbytes  0x00000000
  7          000 Mbytes  0x00000000

>>> How to Read the show mem Display

Figure 2–3 shows an example of the display resulting from the show mem command. In this example, banks 0 and 1 each contain 32 megabytes of memory (four 8 megabyte modules). All other banks contain 0 megabytes, therefore, are empty.

What You Need to Do

Record the information shown in the BANK # and MEMORY_SIZE columns for later reference. After adding or removing memory modules, you can compare the new system memory figure with the previous figure to make sure that all modules are installed and functioning correctly.
Displaying the Configuration

The show config Display

If you are adding one or more TURBOchannel options, enter the `show config` command to show the TURBOchannel modules currently installed in the system.

Figure 2–4 shows an example of the display resulting from the `show config` command.

Figure 2–4  The show config Display

```plaintext
>>> show config

>>>```

How to Read the show config Display

The TCINFO column lists the system's TURBOchannel slots and the modules in each. Note that slots 0 through 4 are for TURBOchannel option modules (listed under DEVNAM as TC0 through TC4); slot 6 contains the SCSI controller; and slots 5, 7, and 8 are for built-in system devices.

Note that if a TURBOchannel option module takes more than one slot, only one of its slot designations will be shown in the display.
Displaying the Configuration

The "OK" in the DEVSTAT column indicates that the device has successfully completed the startup test.

Note that some TURBOchannel option modules do not have a startup test, therefore, no "OK" will appear for them.

In Figure 2–4, a PMAGB-BA module is installed in slot 3, and a PMAG-FA is installed in slot 1. These are two TURBOchannel option modules that may be installed in your system.

What You Need to Do

Record the information in the TCINFO and DEVNAM columns for later reference. After adding a module, you can compare the new system configuration with the previous one to make sure that all modules are present and functioning correctly.

How to Identify Errors

If two question marks appear in the DEVSTAT column of the show config display, an error has been detected for that module.

If an error indicator appears, as shown in Figure 2–5, follow these steps:

1. Use the show error command, as shown in Figure 2–5, and note the FRU and error numbers. In this example, the FRU is 004, and the error number is 0060. The FRU is a field replaceable unit, a drive or module that can be replaced by your Digital service representative.

2. Refer to the DEC 3000 Model 500X AXP Owner's Guide. It will explain how to contact your Digital service representative.

?? 004 SCC 0x0060

>>> 

See Chapter 11 for information on testing TURBOchannel options.

If no error indicators appear, proceed with shutting down the hardware.
Shutting Down Hardware

Shutting Down Hardware

Shutdown Sequence

Turn off (O) the equipment in the following order:
1. System unit
2. Expansion boxes
3. Printer and modem
4. Monitor (Note that turning off the system unit will not automatically turn off the monitor.)

CAUTION: Component Damage

Leave the power cord plugged into the electrical outlet to help protect against static discharge, which might otherwise damage internal components.
Removing Panels

Depending on the options you plan to add, you may not need to remove all panels. Read the instructions for removing each panel to determine whether or not you need to remove that panel.

To remove the panels, follow these steps:

Step 1: Unlock Cover
Unlock the system cover, as shown in Figure 2–6.

Figure 2–6 Unlocking the System Cover
Step 2: Remove Cover

Remove the system cover by sliding it forward and lifting it off, as shown in Figure 2–7. Note that the cover must be removed before you can remove the front panel or either side panel.

Figure 2–7 Removing the System Cover
Removing Panels

**WARNING:**
**Capacitor Discharge**

Allow 15 seconds from the time the system power is turned off until you remove the system's side panels. This delay gives the power supply capacitors time to discharge safely.

**CAUTION:**
**Static Damage**

To avoid damage from static discharge after removing the side panels and before touching anything inside the system, wear an antistatic wrist strap. For information on using an antistatic wrist strap, see Using an Antistatic Wrist Strap later in this chapter.

**Step 3:**
**Remove Left Panel**

If adding memory to the system, or if adding TURBOchannel modules to the left side of the system unit (slots 0, 1, or 2); remove the left side panel by pulling the tabs on the top edge away 1 and lifting the bottom edge out of the track 2, as shown in Figure 2–8. Do not pull on the plastic part of the panel. (TURBOchannel options may be installed in either the left or right side.)
Figure 2–8  Removing the Left Side Panel

1

2

ML0-010550
If adding one or more fixed disk drives or a removable-media drive to the system unit, or if adding TURBOchannel modules to the right side of the system unit (slots 3 or 4); remove the right side panel by pulling the tabs on the top edge away and lifting the bottom edge out of the track, as shown in Figure 2–9. Do not pull on the plastic part of the panel. (TURBOchannel options may be installed in either the left or right side.)

Figure 2–9 Removing the Right Side Panel
Removing Panels

**Step 5:**
**Remove Front Panel**

If adding one or two removable-media drives to the system, remove the front panel by releasing the catches at the top 1, and unhooking the panel bottom 3, as shown in Figure 2–10.

**Figure 2–10  Removing the Front Panel**
Using an Antistatic Wrist Strap

**CAUTION: Component Damage**

To avoid damage to internal components from static discharge, wear an antistatic wrist strap before handling any drive or module, and before touching anything inside the system.

**Putting On an Antistatic Wrist Strap**

To use the wrist strap, follow the instructions on the envelope. Note that the wrist strap may be attached to the metal surface of either side of the power supply, as shown in Figure 2–11.

**Figure 2–11 Using the Antistatic Wrist Strap**
Where to Go from Here

To Install a Specific Option

Each of the following chapters covers the installation of one type of option. To add a particular internal option, refer to the chapter indicated in Table 2–1.

IMPORTANT: Read First

Your system must be prepared before you can install this drive. See Chapter 2 to:

• Back up files
• Shut down the system software
• Determine what options your system has
• Shut down the system hardware
• Remove panels
• Attach the antistatic wrist strap

Chapter Overview

This chapter covers the following topics:

• Description of the RRD42 Drive
• Configuring the RRD42 Drive
• Installing the RRD42 Drive
• Using the RRD42 Drive
• RRD42 Drive Specifications
Description of the RRD42 Drive

The capacity of the RRD42 drive is 600 megabytes.

The RRD42 drive can be used for:

- Installation of the operating system and other software
- Access to read-only databases, such as online documentation

External audio output for the RRD42 drive is through a headphone jack.

The RRD42 drive is shown in Figure 3–1.

**Figure 3–1  RRD42 Compact Disc Drive**
Configuring the RRD42 Drive

Setting Jumpers

Before using the RRD42 drive, configure the drive, that is, set the mode and SCSI address jumpers for the desired operating system and SCSI address. Jumpers are removable electrical connectors. See Figure 3–2 for the location of these jumpers.

Selecting Operating System

The mode jumper allows the drive to work with your operating system. The jumper must be in place for both OpenVMS and DEC OSF/1 operating systems.

Selecting SCSI Address

SCSI jumpers allow selection of a unique address for each SCSI drive. Figure 3–2 shows jumper settings for all SCSI addresses, including the recommended address of 4. If using only one RRD42 drive, use the SCSI address of 4. If using more than one RRD42 drive, you will need to select a unique SCSI address for each additional drive.

Default settings should be changed when a system is configured with more than one of a particular drive.

To change the default address, choose a new one from Figure 3–2, and carefully remove or replace jumpers accordingly, using tweezers or another small tool. Save any SCSI jumpers you remove. You may need them later.
Configuring the RRD42 Drive

Figure 3–2  RRD42 Mode and SCSI Address Jumpers

IMPORTANT: Unique SCSI Address

Each drive must have a unique SCSI address. Never set two or more drives to the same SCSI address; the system will not be able to communicate with the drives.
Installing the RRD42 Drive

Overview
The RRD42 drive is installed in a bracket in the front of the system unit. The following steps tell you how to remove the bracket from the system unit, install the drive in the bracket, install drive cables, and place the bracket (with drive) back into the system unit.

To install an RRD42 drive, follow these steps:

Step 1: Remove Cables from System
Disconnect the power and SCSI cables on the right side of the system, as shown in Figure 3–3. The power and SCSI cables are shown in Figure 3–5 and Figure 3–6.
Installing the RRD42 Drive

Figure 3–3 Disconnecting Power and SCSI Cables
Installing the RRD42 Drive

**Step 2: Remove Bracket**

Remove the drive bracket from the system by releasing the two thumbscrews 1, as shown in Figure 3–4 and pulling the bracket straight out. The thumbscrews will pop out a little when they are fully loosened. If the thumbscrews are too tight, loosen the screws in the center of the thumbscrews.

**Figure 3–4 Removing the Drive Bracket**

---

MLO-007509
Installing the RRD42 Drive

Step 3: Identify Power and SCSI Cables

Each cable has several connectors. Refer to Figure 3–5 and Figure 3–6 when making cable connections.

Figure 3–5 Bracket Power Cable Connectors

1 to system power harness
2 to RRD42 drive power port
3 not used for this drive
4 not used for this drive
Installing the RRD42 Drive

Figure 3–6  Bracket SCSI Cable Connectors

1 to system SCSI bus
2 not used for this drive
3 to RRD42 drive SCSI port
4 terminator

RRD42 Compact Disc Drive 3–9
Installing the RRD42 Drive

**Step 4: Connect Cables to Drive**

Connect the SCSI ① and power ② cables to the ports on the rear of the drive, as shown in Figure 3–7. The connectors are keyed; make sure that they are oriented correctly before attempting to insert them into the drive ports.

*Figure 3–7 Connecting Cables to the RRD42*
Installing the RRD42 Drive

Step 5: Place Drive in Bracket

Place the RRD42 drive in the bracket, as shown in Figure 3–8, and secure it with two screws on each side.

Figure 3–8 Placing the Drive into the Bracket

Position in Bracket

There are two drive positions for the bracket. Mount the RRD42 drive in the upper position, as shown in Figure 3–8, so that it will be on the left after the bracket is reinstalled. If a drive other than another RRD42 drive occupies this upper position, move the other drive to the lower position.
Installing the RRD42 Drive

**Step 6: Position Cables**

Slip the power and SCSI cables into the slot ❶ in the rear of the bracket, as shown in Figure 3–9.

**Figure 3–9 Slipping Cables into the Slot**
Step 7: Slide Bracket into System

Slide the bracket partly into the system, as shown in Figure 3–10.

Figure 3–10  Sliding the Bracket into the System
Installing the RRD42 Drive

Step 8: Guide Bracket Power Cable

Guide the bracket power cable through the opening 1 into the right side of the system, as shown in Figure 3–11.

Figure 3–11 Bracket Power Cable Opening
Step 9: Connect Cables to System

Connect the SCSI cable to the SCSI bus connector, and the power cable to the power harness, as shown in Figure 3–12.

Figure 3–12 Connecting Cables to the System

Step 10: Tighten Thumbscrews

Slide the bracket all the way in, and tighten the two thumbscrews.
Installing the RRD42 Drive

Step 11: Remove Blank Filler Plate

Remove the blank filler plate from the front panel, as shown in Figure 3–13. This filler plate is on the left as you face the front of the panel.

Figure 3–13 Removing the Blank Filler Plate from the Front Panel

Completion

This completes installation of the RRD42 compact disc drive.

5 Headphone Jack
Using the RRD42 Drive

**Handling and Storing Discs and Caddies**

When handling and storing RRD42 discs and caddies:

- Do not drop or strike the disc or the caddy.
- Do not disassemble the caddy.
- Store discs and caddies away from dust.
- Keep discs and caddies out of direct sunlight and away from heaters and other heat sources. Store discs and caddies at a constant temperature between 10°C and 40°C (50°F and 104°F), and where the relative humidity is between 10% and 90%.
- Do not touch the surface of a disc. Handle a disc by its edges.
- Wipe a disc with a compact disc cleaner when dust or fingerprints contaminate its surface.
- Never manually open the caddy shutter, shown in Figure 3–15, or touch the disc. The caddy shutter opens automatically when you insert the caddy into the drive.

**Figure 3–15  Caddy Shutter**
To load a disc into a caddy, follow these steps:

1. Open the caddy by pressing the tabs on both sides of the caddy at the end opposite the shutter, as shown in Figure 3-16.

**Figure 3–16 Opening the Compact Disc Caddy**
Using the RRD42 Drive

2. Set a disc, printed side up, into the caddy as shown in Figure 3–17.

**CAUTION: Disc Damage**

Do not touch the surface of a disc. Handle a disc by its edges. Fingerprints and dust may cause the disc to malfunction.

**Figure 3–17 Loading a Compact Disc into a Caddy**

3. Press firmly on both corners to close the caddy lid.
Inserting a Loaded Caddy

To insert a loaded caddy, follow these steps:

1. Make sure that the system is on ( | ).

2. Insert the disc caddy into the drive with the caddy oriented as shown in Figure 3–18. Push the caddy into the drive as far as it will go. The caddy should be completely inside the drive when properly inserted.

3. Check the busy indicator light. The busy indicator light comes on when the caddy has been inserted correctly. The drive ejects the caddy if the enclosed disc is upside down, if the disc is improperly positioned in the caddy, or if any other conditions prevent the drive from reading the disc.

4. When the busy indicator light goes off, the compact disc drive is ready to use. To operate the compact disc drive, follow the instructions provided with the system software.
Removing a Disc Caddy

To remove a disc caddy, press the eject button shown in Figure 3–14.

The eject button will not work if it is disabled by the software. However, you can still remove the disc manually. To do so, you must shut off the system.

To remove a disc caddy manually:

1. See Chapter 2 for the procedure to shut down the operating system and hardware.

2. With the system power off, insert the end of a large paper clip into the manual eject hole, as shown in Figure 3–19, and push until the disc emerges from the drive.

Figure 3–19  Manually Removing a Caddy

IMPORTANT: Read First

Your system must be prepared before you can install this drive. See Chapter 2 to:

• Back up files
• Shut down the system software
• Determine what options your system has
• Shut down the system hardware
• Remove panels
• Attach the antistatic wrist strap

Chapter Overview

This chapter covers the following topics:

• Description of the RX26 Drive
• Setting SCSI Address
• Installing the RX26 Drive
• Using the RX26 Drive
• RX26 Drive Specifications
Description of the RX26 Drive

Capacity

The capacity of the RX26 drive is 2 or 4 megabytes, on 3½-inch diskettes. The capacity depends on the diskette density used. You can read from and write to 2- and 4-megabyte diskettes. You can also read from 1-megabyte standard 3½-inch diskettes.

Purpose

The RX26 diskette drive can be used for:

• Selective file backup
• Loading applications
• Transporting files between standalone systems

Illustration

The RX26 drive is shown in Figure 4-1.

Figure 4–1  RX26 Diskette Drive
Setting SCSI Address

**Address Switches**

Before using the RX26 drive, check the SCSI address switches to ensure that they are set for the desired SCSI address. See Figure 4–2 for the location of these switches.

SCSI switches allow selection of a unique address for each SCSI drive. Figure 4–2 shows the switches set for all SCSI addresses, including the recommended address of 5.

Default settings should be changed when a system is configured with more than one of a particular drive. The DEC 3000 Model 500X AXP is designed to operate with only one diskette drive, therefore, a change should not be necessary.

If you want to change the default address, choose a new one from Figure 4–2 and, using a small pointed instrument (such as the tip of a ball-point pen), set the switches accordingly.

**CAUTION: Switch Damage**

Do not use a pencil to set the SCSI switches. Graphite particles can damage the switches.
Setting SCSI Address

Figure 4–2 RX26 SCSI Address Switches

IMPORTANT:
Unique SCSI Address

Each drive must have a unique SCSI address. Never set two or more drives to the same SCSI address; the system will not be able to communicate with the drives.
Setting SCSI Address

Setting the Unit Select Switch

Make sure that the unit select switch is set to 2, as shown in Figure 4–3.

Figure 4–3 RX26 Unit Select Switch

Installing the RX26 Drive

Overview

The RX26 drive is mounted in a bracket in the front of the system unit. The following steps tell you how to remove the bracket from the system unit, install the drive in the bracket, install drive cables, and place the bracket (with drive) back into the system unit.

To install an RX26 diskette drive, follow these steps:
Installing the RX26 Drive

Step 1: Remove Cables from System

Disconnect the power and SCSI cables on the right side of the system, as shown in Figure 4–4. The power and SCSI cables are shown in Figure 4–6 and Figure 4–7.

Figure 4–4 Disconnecting Power and SCSI Cables
Step 2: Remove Bracket

Remove the drive bracket from the system by releasing the two thumbscrews 1, as shown in Figure 4–5, and pulling the bracket straight out. The thumbscrews will pop out a little when they are fully loosened. If the thumbscrews are too tight, loosen the screws in the center of the thumbscrews.

Figure 4–5  Removing the Drive Bracket
Installing the RX26 Drive

Step 3: Identify Bracket Power and SCSI Cables

Each cable has several connectors. Refer to Figure 4–6 and Figure 4–7 when making cable connections.

**Figure 4–6 Bracket Power Cable Connectors**

1. to system power harness
2. not used for this drive
3. to RX26 drive module power port
4. to RX26 drive power port
Installing the RX26 Drive

Figure 4–7 Bracket SCSI Cable Connectors

1 to system SCSI bus
2 to RX26 drive module SCSI port
3 not used for this drive
4 terminator
Installing the RX26 Drive

**Step 4:**
**Connect Cables to Drive**

Connect the power 1 and SCSI 2 cables to the ports on the rear of the drive board, as shown in Figure 4–8. Connect the small power connector 3 to the port on the rear of the drive, as shown in Figure 4–8. The connectors are keyed; make sure that they are oriented correctly before attempting to insert them into the drive ports.

**Figure 4–8  Connecting Cables to the RX26 Drive**
Step 5: Place Drive in Bracket

Place the RX26 drive in the bracket, as shown in Figure 4–9, and secure it with two screws on each side.

Figure 4–9 Placing the Drive into the Bracket

Position in Bracket

The RX26 drive should be mounted in the lower position, as shown in Figure 4–9, so that it will be on the right after the bracket is reinstalled. If another drive occupies this position, move the other drive to the upper position.
Installing the RX26 Drive

**Step 6: Position Cables**

Slip the power and SCSI cables into the slot 1 in the rear of the bracket, as shown in Figure 4–10.

**Figure 4–10 Slipping Cables into the Slot**
Slide the bracket partly into the system, as shown in Figure 4–11.

Figure 4–11  Sliding the Bracket into the System
Step 8: Guide Bracket Power Cable

Guide the bracket power cable through the opening 1 into the right side of the system, as shown in Figure 4–12.

Figure 4–12  Bracket Power Cable Opening
Installing the RX26 Drive

Step 9: Connect Cables to System

Connect the bracket SCSI cable to the SCSI bus connector, and the power cable to the power harness, as shown in Figure 4–13.

Figure 4–13 Connecting Cables

Step 10: Tighten Thumbscrews

Slide the bracket all the way in, and tighten the two thumbscrews.
Installing the RX26 Drive

**Step 11: Remove Blank Filler Plate**  
Remove the blank filler plate from the front panel, as shown in Figure 4–14. This filler plate is on the right as you face the front of the panel.

**Figure 4–14 Removing the Blank Filler Plate from the Front Panel**
Step 12: Install RX26 Filler Plate

Install the RX26 filler plate in the front panel, as shown in Figure 4–15.

Figure 4–15 Placing the RX26 Filler Plate in the Front Panel

Completion

This completes installation of the RX26 diskette drive.

Using the RX26 Drive

RX26 Control and Indicator

Figure 4-16 shows the RX26 eject button 1 and busy indicator light 2.

Figure 4–16  RX26 Control and Indicator
CAUTION: Diskette Damage

When handling and storing RX26 diskettes:

- Keep the diskettes dry, out of extreme temperatures and direct sunlight.
- Keep the diskettes away from any equipment that contains a magnet, such as the monitor or a telephone.
  The heat and electromagnetic field of the monitor can damage diskettes by distorting or erasing the magnetic data.

For further information, refer to the RX26 Owner’s Reference Card, listed in Appendix A.

Write-Protecting Diskettes

Write-protecting a diskette prevents accidental overwriting or erasure of data on the diskette. For example, if using a diskette to install software applications on the system, you may want to protect the information on the diskette.

Before using a diskette, check its write-protect switch. When the switch is in the "Protect" position, you can read information from the diskette, but cannot write to it.

To write-protect a diskette, move the write-protect switch down on the back of the diskette until it locks into place, as shown in Figure 4–17.
Using the RX26 Drive

**Figure 4–17 Write-Protecting a Diskette**

To write to a diskette, that is, to allow writing data on the diskette, slide the switch up on the back of the diskette until it locks into place.

**CAUTION:**

Never insert or remove a diskette when the diskette drive is in use (when the indicator light on the front of the drive is on); doing so can damage the diskette.
To insert a diskette into the diskette drive:

1. Make sure that the indicator light is off.

2. Slide the diskette into the drive, as shown in Figure 4–18. Note that the beveled corner is up. The diskette slides straight into its load position.

3. If you are using the OpenVMS operating system, refer to your operating system documentation for mounting instructions.

Figure 4–18 Inserting a Diskette
Removing Diskettes

To remove a diskette:

1. Make sure that the indicator light is off.

2. If you are using the OpenVMS operating system, refer to your operating system documentation for dismounting instructions.

3. Press the eject button 1, as shown in Figure 4–19. When the diskette pops halfway out, pull the diskette out of the drive.

Figure 4–19 Removing a Diskette
RX26 Drive Specifications

This section contains the following information:

IMPORTANT: Read First

Your system must be prepared before you can install this drive. See Chapter 2 to:

• Back up files
• Shut down the system software
• Determine what options your system has
• Shut down the system hardware
• Remove panels
• Attach the antistatic wrist strap

Chapter Overview

This chapter covers the following topics:

• Description of the TZK10 Drive
• Configuring the TZK10 Drive
• Installing the TZK10 Drive
• Using the TZK10 Drive
• TZK10 Drive Specifications
Description of the TZK10 Drive

Capacity
The capacity of the TZK10 drive is 320 or 525 megabytes, depending on the tape used.

Cartridges
The TZK10 tape drive can use any of the Digital tape cartridges listed in Table 5–6.

Purpose
The TZK10 tape drive can be used for:
• File backup
• Loading applications

Illustration
The TZK10 tape drive is shown in Figure 5–1.

Figure 5–1  TZK10 Tape Drive
Configuring the TZK10 Drive

**Setting Jumpers**

Before using the TZK10 drive, configure the drive, that is, check the DADS and DRIVE SELECT jumpers to make sure that they are set for the desired operating system and SCSI address. Jumpers are removable electrical connectors. See Figure 5–2 and the label on the rear of the drive for the location of these jumpers.

**Selecting Operating System**

The DADS jumper allows the drive to work with your operating system. The DADS jumper is the fifth jumper from the right side, and must be in place for both OpenVMS and DEC OSF/1 operating systems.

**Selecting SCSI Address**

DRIVE SELECT jumpers allow selection of a unique address for each SCSI drive. Figure 5–2 shows jumpers set for all SCSI addresses, including the recommended address of 5. The DRIVE SELECT jumpers are the second, third, and fourth jumpers from the right side.

Default settings should be changed when a system is configured with more than one of a particular drive.

To change the default address, choose a new one from Figure 5–2 and carefully remove or replace jumpers accordingly, using tweezers or another small tool. Save any jumpers you remove. You may need them later.
Configuring the TZK10 Drive

**Figure 5–2  TZK10 DRIVE SELECT and DADS Jumpers**

**IMPORTANT:**

**Unique SCSI Address**

Each drive must have a unique SCSI address. Never set two or more drives to the same SCSI address; the system will not be able to communicate with the drives.
Installing the TZK10 Drive

Overview
The TZK10 drive is installed in a bracket in the front of the system unit. The following steps tell you how to remove the bracket from the system unit, install the drive in the bracket, install drive cables, and place the bracket (with drive) back into the system unit.

To install a TZK10 drive, follow these steps:

Step 1: Remove Cables from System
Disconnect the power and SCSI cables on the right side of the system, as shown in Figure 5–3. The power and SCSI cables for the bracket are shown in Figure 5–5 and Figure 5–6.
Installing the TZK10 Drive

Figure 5–3 Disconnecting Power and SCSI Cables
Step 2: Remove Bracket

Remove the drive bracket from the system by releasing the two thumbscrews, as shown in Figure 5–4, and pulling the bracket straight out. The thumbscrews will pop out a little when they are fully loosened. If the thumbscrews are too tight, loosen the screws in the center of the thumbscrews.

Figure 5–4 Removing the Drive Bracket
Installing the TZK10 Drive

Step 3: Identify Bracket Power and SCSI Cables

Each cable has several connectors. Refer to Figure 5–5 and Figure 5–6 when making cable connections.

Figure 5–5 Bracket Power Cable Connectors

1 to system power harness
2 to TZK10 drive, if installed in upper position
3 to TZK10 drive, if installed in lower position
4 not used for this drive
Installing the TZK10 Drive

Figure 5–6  Bracket SCSI Cable Connectors

1 to system SCSI bus
2 to TZK10 drive, if installed in lower position
3 to TZK10 drive, if installed in upper position
4 terminator
Step 4: Connect Cables to Drive

Connect the power 1 and SCSI 2 cables to the ports on the rear of the drive, as shown in Figure 5–7. The connectors are keyed; make sure that they are oriented correctly before attempting to insert them into the drive ports.

Figure 5–7 Connecting Cables to the TZK10 Drive
Installing the TZK10 Drive

Step 5: Place Drive in Bracket
Place the TZK10 drive in the bracket, as shown in Figure 5–8, and secure it with two screws on each side.

Figure 5–8 Placing the Drive into the Bracket

Position in Bracket
The TZK10 drive may be installed in either the upper or lower position.
Installing the TZK10 Drive

Step 6: Position Cables

Slip the power and SCSI cables into the slot 1 in the rear of the bracket, as shown in Figure 5–9.

Figure 5–9 Slipping Cables into the Slot
Installing the TZK10 Drive

Step 7: Slide Bracket into System

Slide the bracket partly into the system, as shown in Figure 5–10.

Figure 5–10  Sliding the Bracket into the System
Installing the TZK10 Drive

Step 8: Guide Bracket Power Cable

Guide the bracket power cable through the opening 1 into the right side of the system, as shown in Figure 5–11.

Figure 5–11 Bracket Power Cable Opening
Connecting the TZK10 Drive:

**Step 9: Connect Cables to System**
Connect the bracket SCSI cable to the SCSI bus connector, and the power cable to the power harness, as shown in Figure 5–12.

**Figure 5–12 Connecting Cables to the System**

**Step 10: Tighten Thumbscrews**
Slide the bracket all of the way in, and tighten the two thumbscrews.
Installing the TZK10 Drive

**Step 11: Remove Blank Filler Plate**

Remove the blank filler plate from the front panel position used by the drive, as shown in Figure 5–13.

Note that Figure 5–13 shows the left filler plate being removed. The left filler plate (as you look at the front of the panel) will be removed if the drive is installed in the upper position of the bracket; the right filler plate will be removed if the drive is installed in the lower position.

**Figure 5–13 Removing the Blank Filler Plate from the Front Panel**

Completion

This completes installation of the TZK10 tape drive.

¹Tape cartridge is loaded automatically when inserted.

CAUTION: Handling and Storing Tape Cartridges

When handling and storing TZK10 tape cartridges:

• Do not drop or strike cartridges.

• Keep cartridges out of direct sunlight, away from heaters and other sources of heat.

• Store cartridges where the temperature is between 10°C and 40°C (50°F and 104°F).

• If a cartridge has been exposed to extreme heat or cold, allow it to stabilize at room temperature for the same amount of time as it was exposed, up to 24 hours.

• Avoid placing cartridges near sources of electromagnetic interference, such as terminals, motors, and video or X-ray equipment. Any tape exposed to a magnetic field can lose information.

• Store a cartridge in a dust-free environment where the relative humidity is between 20% and 80%.

• Store a cartridge in its protective container, on edge or stacked. However, when stacking cartridges, do not stack more than five high.

• Place an identification label only in the space provided for the label on top of the cartridge.

For further information refer to the TZK10 Cartridge Tape Drive Owner’s Guide, listed in Appendix A.
Write-protecting a cartridge prevents accidental overwriting or erasure of data on the cartridge.

Before you use a cartridge, check its write-protect switch. When the switch is in the SAFE position, you can read information from the cartridge, but cannot write to it.

<table>

</table>

Figure 5–15 Write-Protecting TZK10 Tape Cartridges
To insert the tape into the drive, follow these steps:

1. Make sure that the system unit is on (|).
2. Press the eject button to open the drive door on the front of the system unit (see Figure 5–16).
3. Insert the TZK10 tape cartridge into the drive with the cartridge oriented as shown in Figure 5–16.
4. Slide the cartridge straight into the drive until you feel resistance, then close the door.
   When the tape is properly inserted, the indicator light is solid green and you can issue operating system commands.
5. If you are using the OpenVMS operating system, refer to your operating system documentation for mounting instructions.
Using the TZK10 Drive

**Figure 5–16** Inserting the TZK10 Tape Cartridge
Removing a TZK10 Tape Cartridge

To remove the tape from the drive, follow these steps:

1. If you are using the OpenVMS operating system, refer to your operating system documentation for dismounting instructions.

2. After data transfer is complete (the tape stops and the indicator light returns to solid green), press the eject button, as shown in Figure 5–17.

3. When the door opens and the cartridge ejects part way, open the door completely, grasp the cartridge, and slide it out of the drive.

</tbody>
</table>
Configuring the TLZ06 Drive

**Figure 6–2 TLZ06 Operating System (Mode) and SCSI Address Switches**

**IMPORTANT:**
**Unique SCSI Address**

Each drive must have a unique SCSI address. Never set two or more drives to the same SCSI address; the system will not be able to communicate with the drives.
Installing the TLZ06 Drive

Overview

The TLZ06 drive is mounted in a bracket in the front of the system unit. The following steps tell you how to remove the bracket from the system unit, install the drive in the bracket, install drive cables, and place the bracket (with drive) back into the system unit.

To install a TLZ06 drive, follow these steps:

Step 1: Remove Cables from System

Disconnect the power and SCSI cables on the right side of the system, as shown in Figure 6–3. The power and SCSI cables for the bracket are shown in Figure 6–5 and Figure 6–6.
Figure 6–3  Disconnecting Power and SCSI Cables
Installing the TLZ06 Drive

Step 2: Remove Bracket

Remove the drive bracket from the system by releasing the two thumbscrews 1, as shown in Figure 6–4, and pulling the bracket straight out. The thumbscrews will pop out a little when they are fully loosened. If the thumbscrews are too tight, loosen the screws in the center of the thumbscrews.

Figure 6–4 Removing the Drive Bracket
Installing the TLZ06 Drive

**Step 3: Identify Bracket Power and SCSI Cables**

Each cable has several connectors. Refer to Figure 6–5 and Figure 6–6 when making cable connections.

**Figure 6–5 Bracket Power Cable Connectors**

1. to system power harness
2. to TLZ06 drive, when installed in upper position
3. to TLZ06 drive, when installed in lower position
4. not used for this drive
Installing the TLZ06 Drive

1 to system SCSI bus
2 to TLZ06 drive, when installed in lower position
3 to TLZ06 drive, when installed in upper position
4 terminator
Installing the TLZ06 Drive

Step 4: Connect Cables to Drive

Connect the power 1 and SCSI 2 cables to the ports on the rear of the drive, as shown in Figure 6–7. The connectors are keyed; make sure that they are oriented correctly before attempting to insert them into the drive ports.

Figure 6–7 Connecting Cables to the TLZ06 Drive
Step 5: Place Drive in Bracket

Place the TLZ06 drive in the bracket, as shown in Figure 6–8, and secure it with two screws on each side.

Figure 6–8  Placing the Drive into the Bracket

Position in Bracket

The TLZ06 drive may be mounted in either the upper or lower position.
Installing the TLZ06 Drive

Step 6: Position Cables

Slip the power and SCSI cables into the slot 1 in the rear of the bracket, as shown in Figure 6–9.

Figure 6–9 Slipping Cables into the Slot
Installing the TLZ06 Drive

Step 7: Slide Bracket into System

Slide the bracket partly into the system, as shown in Figure 6–10.

Figure 6–10  Sliding the Bracket into the System
Guide the bracket power cable through the opening 1 into the right side of the system, as shown in Figure 6–11.

Figure 6–11  Bracket Power Cable Opening
**Step 9: Connect Cables to System**

Connect the bracket SCSI cable to the SCSI bus connector, and the power cable to the power harness, as shown in Figure 6–12.

*Figure 6–12 Connecting Cables to the System*

---

**Step 10: Tighten Thumbscrews**

Slide the bracket all of the way in, and tighten the two thumbscrews.
Step 11: Remove Blank Filler Plate

Remove the blank filler plate from the front panel position used by the drive, as shown in Figure 6–13.

Note that Figure 6–13 shows the right plate being removed. The left plate (as you look at the front of the panel) is removed if the drive is mounted in the upper position of the bracket; the right plate is removed if the drive is mounted in the lower position.

Figure 6–13 Removing the Blank Filler Plate from the Front Panel

Completion

This completes installation of the TLZ06 tape drive.
Installing the TLZ06 Drive

**TLZ06 Control and Indicators**

Figure 6–14 shows the control and indicators on the TLZ06 drive.

**Figure 6–14 TLZ06 Control and Indicators**

- **1** Tape unload button
- **2** Write-protect indicator
- **3** Tape activity indicator
When handling and storing TLZ06 tape cassettes:

- Do not drop or strike cassettes.
- Keep cassettes out of direct sunlight, away from heaters and other sources of heat.
- Store cassettes where the temperature is between 10°C and 40°C (50°F and 104°F).
- If a cassette has been exposed to extreme heat or cold, allow it to stabilize at room temperature for the same amount of time as it was exposed, up to 24 hours.
- Avoid placing cassettes near sources of electromagnetic interference, such as terminals, motors, and video or X-ray equipment. Any tape exposed to a magnetic field can lose information.
- Store cassettes in a dust-free environment where the relative humidity is between 20% and 80%.
- Store cassettes in their protective containers, on edge or stacked. However, when stacking cassettes, do not stack more than five high.
- Place an identification label only in the space provided for the label on top of the cassette, as shown in Figure 6–15.
Using the TLZ06 Drive

Labeling TLZ06 Tape Cassettes

Figure 6–15 shows the proper placement of a cassette label.

Figure 6–15 Labeling the TLZ06 Tape Cassette
Write-Protecting TLZ06 Tape Cassettes

To write-protect a TLZ06 cassette, slide the write-protect switch to the left \( \uparrow \), as shown in Figure 6–16. To allow the drive to write to the cassette, slide the switch to the right.

**Figure 6–16  Write-Protecting the TLZ06 Tape Cassette**
Using the TLZ06 Drive

**Inserting a TLZ06 Tape Cassette**

To insert the tape into the drive, follow these steps:

1. Make sure that the system unit is on (\|\).
2. Insert the TLZ06 tape cassette into the drive, as shown in Figure 6-17.
3. If you are using the OpenVMS operating system, refer to your operating system documentation for mounting instructions.

**Figure 6–17  Inserting the TLZ06 Tape Cassette**
To remove the tape from the drive, follow these steps:

1. If you are using the OpenVMS operating system, refer to your operating system documentation for dismounting instructions.

2. Press the tape unload button 1, as shown in Figure 6–18, and remove the tape from the drive.

1Can read only if compression is not enabled.
IMPORTANT: Read First

Your system must be prepared before you can install this drive. See Chapter 2 to:

- Back up files
- Shut down the system software
- Determine what options your system has
- Shut down the system hardware
- Remove panels
- Attach the antistatic wrist strap

Chapter Overview

This chapter covers the following topics:

- Description of the RZ25 Drive
- Setting SCSI Address
- Installing the RZ25 Drive
- Removing an RZ25 Drive
- RZ25 Drive Specifications
Description of the RZ25 Drive

**Capacity**

The capacity of the RZ25 drive is 426 megabytes.

**Purpose**

The RZ25 drive can be used for storing applications and user files.

**Illustration**

The RZ25 fixed disk drive is shown in Figure 7-1.

**Figure 7–1  RZ25 Fixed Disk Drive**
Before using the RZ25 drive, check the SCSI address jumpers to ensure that they are set for the desired address. Jumpers are removable electrical connectors that allow selection of a unique address for each SCSI drive.

Figure 7–2 shows jumper settings for all SCSI addresses, including the recommended addresses of 0, 1, and 2. If your system does not contain a factory-installed fixed disk, the address of 3 should also be available. If using more than one fixed disk drive, select a unique SCSI address for each fixed disk drive. Figure 7–4 shows preferred addresses for given drive positions.

If the fixed disk drive was not factory-installed, it may have been shipped with all of the jumpers attached (to prevent loss of jumpers when shipping and unpacking). In this case, the address is set to 7, and you need to change it.

To change the default address, choose a new one from Figure 7–2 and carefully remove or replace jumpers accordingly. Save any SCSI jumpers you remove. You may need them later.
Setting SCSI Address

**Figure 7–2 RZ25 SCSI Address Jumpers**

**IMPORTANT:**

**Unique SCSI Address**

Each drive must have a unique SCSI address. Never set two or more drives to the same SCSI address; the system will not be able to communicate with the drives.
The SCSI address for the RZ25 drive is designed to be set either manually or automatically. The automatic setting is not applicable to the DEC 3000 Model 500X AXP system, therefore, you need to make sure that the first three jumpers on the left of this secondary port are removed, as shown in Figure 7–3. Be careful to remove only the SCSI address jumpers; do not remove any others.

Figure 7–3  RZ25 Secondary SCSI Address Port
Installing the RZ25 Drive

Overview

Up to four fixed disk drives may be installed in the system. An RZ25 or RZ26 drive can be installed at any of the four drive positions shown in Figure 7–4. The numbers refer to the preferred SCSI addresses for given positions.

Figure 7–4 Fixed Disk Drive Positions
Installing the RZ25 Drive

Step 1: Connect Cables

Connect the SCSI 1 and power 2 connectors to the RZ25 disk drive, as shown in Figure 7–5. The connectors are keyed; make sure that they are oriented correctly before attempting to insert them into the drive.

Figure 7–5 Connecting RZ25 Cables
Installing the RZ25 Drive

**Step 2: Attach Drive to System**

Orient the drive as shown in Figure 7–6, insert the knobs on the base of the drive into the holes in the mounting position, and slide the drive down until the latch engages.

**Figure 7–6 Installing the RZ25 Drive**

Completion

This completes installation of the RZ25 fixed disk drive.

IMPORTANT: Read First

Your system must be prepared before you can install this drive. See Chapter 2 to:

- Back up files
- Shut down the system software
- Determine what options your system has
- Shut down the system hardware
- Remove panels
- Attach the antistatic wrist strap

Chapter Overview

This chapter covers the following topics:

- Description of the RZ26 Drive
- Setting SCSI Address
- Installing the RZ26 Drive
- Removing an RZ26 Drive
- RZ26 Drive Specifications
Description of the RZ26 Drive

Capacity
The capacity of the RZ26 drive is 1.05 gigabytes.

Purpose
The RZ26 drive can be used for storing applications and user files.

Illustration
The RZ26 fixed disk drive is shown in Figure 8–1.

Figure 8–1  RZ26 Fixed Disk Drive
Before using the RZ26 drive, check the SCSI address jumpers to ensure that they are set for the desired address. Jumpers are removable electrical connectors. See Figure 8–2 for the location of these jumpers.

SCSI jumpers allow selection of a unique address for each SCSI drive. Figure 8–2 shows jumpers 0, 1, and 2 set for all SCSI addresses, including the recommended addresses of 0, 1, and 2. If your system does not contain a factory-installed fixed disk, the address of 3 should also be available. If using more than one fixed disk drive, select a unique SCSI address for each fixed disk drive. Figure 8–3 shows preferred addresses for given drive positions.

If the fixed disk drive was not factory-installed, it may have been shipped with all of the jumpers attached (to prevent loss of jumpers when shipping and unpacking). In this case, the address is set to 7, and you will need to change it.

When changing the default address, choose a new one from Figure 8–2 and carefully remove or replace jumpers accordingly. Save any SCSI jumpers you remove. You may need them later.
Setting SCSI Address

Figure 8–2 RZ26 SCSI Address Jumpers

IMPORTANT: Unique SCSI Address
Each drive must have a unique SCSI address. Never set two or more drives to the same SCSI address; the system will not be able to communicate with the drives.
Installing the RZ26 Drive

Overview

Up to four fixed disk drives may be installed in the system. An RZ25 or RZ26 drive can be installed at any of the four drive positions, as shown in Figure 8–3. The numbers refer to the preferred SCSI addresses for given positions.

Figure 8–3 Fixed Disk Drive Positions
Installing the RZ26 Drive

**Step 1: Connect Cables**

Connect the SCSI 1 and power 2 connectors to the RZ26 disk drive, as shown in Figure 8–4. The connectors are keyed; make sure that they are oriented correctly before attempting to insert them into the drive.

**Figure 8–4 Connecting RZ26 Cables**
Step 2: Attach Drive to System

Orient the drive as shown in Figure 8–5, insert the knobs on the base of the drive into the holes in the mounting position, and slide the drive down until the latch engages.

Figure 8–5 Installing the RZ26 Drive

Completion

This completes installation of the RZ26 fixed disk drive.

IMPORTANT: Read First

Your system must be prepared before you can install memory modules. See Chapter 2 to:

- Back up files
- Shut down the system software
- Determine what options your system has
- Shut down the system hardware
- Remove panels
- Attach the antistatic wrist strap

Chapter Overview

This chapter covers the following topics:

- Determining What Modules You Need
- Memory from Other Systems
- Configuration Table
- Installing Memory Modules
- Removing Memory Modules
Determining What Modules You Need

Memory Module Sizes

Memory modules are available in 4-megabyte and 8-megabyte sizes. Four-megabyte modules have components on one side. Eight-megabyte modules have components on both sides (front and back).

Figure 9–1 shows 4-megabyte and 8-megabyte memory modules.

System Memory

The basic system has 32 megabytes of memory (eight 4-MB modules installed). To increase the DEC 3000 Model 500X AXP system's memory capacity, you can order memory upgrades. When you order upgrade number MS15-CA, you will receive eight 4-MB modules. When you order upgrade number MS15-DA, you will receive eight 8-MB modules. For a particular memory configuration, see Table 9-1.

The DEC 3000 Model 500X AXP system can hold a maximum of 256 megabytes (32 8-megabyte memory modules). Higher capacity memory modules may be available later.
Table 9–1 shows which modules need to be installed for a given total amount of memory.

<table>
<thead>
<tr>
<th>Desired Memory</th>
<th>Modules to Add</th>
</tr>
</thead>
<tbody>
<tr>
<td>32 MB</td>
<td>Eight 4-MB modules</td>
</tr>
<tr>
<td>64 MB</td>
<td>Eight 8-MB modules</td>
</tr>
<tr>
<td>64 MB</td>

</tr>
<tr>
<td>224 MB</td>
<td>Eight 4-MB and 24 8-MB modules</td>
</tr>
<tr>
<td>256 MB</td>
<td>32 8-MB modules</td>
</tr>
</tbody>
</table>

Note that modules are installed in sets of eight (two modules on each of four memory mother boards (MMBs), as shown in Figure 9–2).

Do not attempt to use memory modules from any other system in the DEC 3000 Model 500X AXP system. Other modules are not compatible with this system.
Before Installing

CAUTION: Memory Module Damage

To avoid damage from static discharge after removing the left side panel and before opening the shipping bag for any memory module, and before touching anything inside the system, wear an antistatic wrist strap. See Using an Antistatic Wrist Strap in Chapter 2 for more information.

Handle memory modules by their edges to avoid damaging and contaminating the module pins and connectors.

Memory Mother Boards (MMBs)

Memory modules are installed onto four memory mother boards (MMBs), which are installed into the system. Figure 9–2 shows an MMB with two memory modules installed on it.

Figure 9–2 Memory Mother Board (MMB)
Before Installing

Where to Install

Figure 9–3 shows the location of MMBs with memory modules inside the system.

Figure 9–3 Location of MMBs and Memory Modules
Installing Memory Modules

To install memory modules in the system, follow these steps:

Step 1: Remove the Fan Bracket

Remove the fan bracket by disconnecting the power cable and removing the three screws, as shown in Figure 9–4.

Figure 9–4 Removing the Fan Bracket
Step 2: Remove the MMB Clips

Remove the two clips from the MMBs, as shown in Figure 9–5.

Figure 9–5 Removing MMB Clips
Installing Memory Modules

Step 3: Remove the MMBs

Remove all four MMBs from their channels by releasing the catches and sliding the boards out, as shown in Figure 9–6.

Figure 9–6 Removing an MMB
Step 4: Place the MMBs on Protected Surface

Place the four MMBs, with the connectors up, on a flat surface that is protected from electrostatic discharge (such as an antistatic mat), as shown in Figure 9–7.

Figure 9–7  Placing the MMBs
Guidelines for Installing

The following guidelines should be used when installing memory modules:

- Modules must be added in sets of eight, adding two modules to each of the four MMBs.

- Add modules starting at the empty MMB slots with the lowest numbers. Add two modules to the corresponding slots on each MMB, as shown by the shaded areas in Figure 9–7.

- Use the same size (MB) modules for a set of eight slots. For example, you might add a set of eight 4-MB modules or a set of eight 8-MB modules, but do not mix 4- and 8-MB modules within a set. If you do mix different sizes of memory modules within a set, your system will not recognize some of the memory.
Step 5: Install Modules in MMB

Install the memory modules in the MMBs, using the previous guidelines. Hold the module at an angle, with the notch end as shown in Figure 9–8, and place it in the slot. Make sure that the board is firmly seated in the connector, but do not force it. Push the board upright so that it stands vertically. You should hear a distinctive click on each side when the board is pushed vertically.

Figure 9–8 Installing a Memory Module

Working from the lower numbered slots to the higher numbered slots, continue adding modules in empty slots of the MMBs until the system contains the desired amount of memory.
Step 6: Install MMBs

Install the MMBs into the card guides in the side of the system, as shown in Figure 9–9. Make sure that the MMBs are firmly seated in their connectors, but do not force them.

Figure 9–9 Installing an MMB
Installing Memory Modules

Step 7: Install the MMB Clips

Install the two clips on the MMBs, as shown in Figure 9–10.

Figure 9–10 Installing MMB Clips

Step 8: Install the Fan Bracket

Install the fan bracket and screws, and reconnect the power cable 1, as shown in Figure 9–11.
Completion

This completes installation of the memory modules.
Installing Memory Modules

</tbody>
</table>

Removing Memory Modules

You may need to remove memory modules at some time, such as when replacing them with higher capacity modules. To remove modules, see the following steps.

IMPORTANT: System Needs

Note that the system will not operate if no memory modules are installed. You must have at least one set of eight memory modules.
Removing Memory Modules

Step 1: Remove the Fan Bracket

Remove the fan bracket by disconnecting the power cable and removing the three screws, as shown in Figure 9–12.

Figure 9–12 Removing the Fan Bracket
Step 2: Remove the MMB Clips

Remove the two clips from the MMBs, as shown in Figure 9–13.

Figure 9–13 Removing MMB Clips
Removing Memory Modules

Step 3: Remove MMBs

Remove all four MMBs from their channels by releasing the catches and sliding the boards out, as shown in Figure 9–14.

Figure 9–14 Removing an MMB
Step 4: Remove Memory Modules

To remove modules, start at the MMB slots with the highest numbers, and work toward the slots with the lowest numbers. Remove the memory modules from the MMBs by releasing the metal clips at each end of the module 1, tilting the module 2, and lifting it out 3, as shown in Figure 9–15. Remove modules in sets of eight, removing two modules from corresponding slots on each of the four MMBs.

Figure 9–15 Removing a Memory Module
Removing Memory Modules

Step 5: Replace MMBs

Place the MMBs back into the card guides in the side of the system, as shown in Figure 9–16. Make sure that the MMBs are firmly seated in their connectors, but do not force them.

Figure 9–16  Installing an MMB
Step 6: Install the MMB Clips

Install the two clips on the MMBs, as shown in Figure 9–17.

Figure 9–17 Installing MMB Clips
Removing Memory Modules

**Step 7: Install the Fan Bracket**

Install the fan bracket and screws, and reconnect the power cable 1, as shown in Figure 9–18.

**Figure 9–18 Installing the Fan Bracket**
IMPORTANT: Read First

Your system must be prepared before you can install TURBOchannel modules. See Chapter 2 to:

- Back up files
- Shut down the system software
- Determine what options your system has
- Shut down the system hardware
- Remove panels
- Attach the antistatic wrist strap

Chapter Overview

This chapter covers descriptions, installation, and removal of the following TURBOchannel options:

- HX 2D Graphics Module (PMAGB–B)
- TX 2D Graphics Module (PMAGB–J)
- PXG+ 8-Plane 3D Graphics Module (PMAGB–D)
- 8-to-24 Plane Upgrade (PMAG–G)
- 24-Bit Z-Buffer Upgrade (PMAG–H)
- PXG+ 24-Plane 3D Graphics Module (PMAGB–E)
Chapter Overview

- PXG Turbo+ 3D Graphics Module (PMAGB–F)
- FDDI controller Module (DEFTA–A)
- AUI Ethernet Module (PMAD–A)
- Dual SCSI Module (PMAZB–A)
- NVRAM Module (PMTNV–A)

TURBOchannel Overview

What It Is

TURBOchannel is a high-performance module interconnect technology that permits the use of graphics, multimedia and communications options. Table 10–1 gives an overview of the Digital TURBOchannel options that were available for your system when it first shipped. Others may be available later.

Table 10–1 Digital TURBOchannel Options

</table>

Third-Party Options

Although this chapter covers TURBOchannel option modules manufactured by Digital, other companies have developed modules that may be compatible with the DEC 3000 Model 500X AXP system. Consult your Digital sales representative for more information.
The system unit has five TURBOchannel option module slots; three on the system module (left side of the system), and two on the I/O module (right side of the system), as shown in Figure 10–1.

Note that, since Figure 10–1 shows the rear of the system, the left side of the system is on the right side of the figure (slots 0, 1, and 2), and the right side of the system is on the left side of the figure (slots 3 and 4).

Figure 10–1  TURBOchannel Option Slots
The TURBOchannel option modules have different widths, each occupying 1, 2, or 3 slots, as shown in Figure 10–2. All modules have identical connectors that connect to the system or the I/O modules, except for the 8-to-24 Plane Upgrade and 24-Bit Z-Buffer Upgrade options, which connect directly to the PXG+ module.

Figure 10–2  TURBOchannel Option Widths

Compatibility of Graphics Modules

Some of the TURBOchannel modules provide graphics enhancements, but not all graphics modules are compatible with all monitors. Before upgrading the graphics module, you should consider the monitor requirements. Consult your Digital sales representative and your monitor documentation for more information.

IMPORTANT: Use Correct Documentation

If you are installing an option, note that the documentation shipped with that option may not cover installation in a DEC 3000 Model 500X AXP system. Use this chapter for installation and removal instructions.
Description of Options

HX 2D Graphics Module

The HX 2D graphics module is the smart frame buffer (PMAGB–B) accelerator for multihead systems, that is, systems that use more than one monitor. You will need one module for each additional 66 Hz or 72 Hz monitor. The DEC 3000 Model 500X AXP will support up to four monitors. The module occupies one slot in the system unit.

The module is shown in Figure 10–3. (See HX Module Jumper Setting, later in this chapter, for information on how to set the module jumper to select your monitor before installation.)

Figure 10–3  HX 2D Graphics Module
Description of Options

**TX 2D Graphics Module**

The TX 2D graphics module is the 24-plane color frame buffer (PMAGB–J). This module is for multihead systems, that is, systems that use more than one monitor. It occupies one slot in the system unit, and supports a 1280 x 1024, 72 Hz monitor (such as the VRT16, VRT19, or VR320).

The module is shown in Figure 10–4. (See TX Module Modification, later in this chapter, for information on how to modify the module before installation.)

**Figure 10–4 TX 2D Graphics Module**
Description of Options

**PXG+ 8-Plane 3D Graphics Module**

The PXG+ 8-plane 3D graphics module (PMAGB–D) is a 3D accelerator. It occupies two adjacent slots in the system unit. The module is shown in Figure 10–5.

**Figure 10–5 PXG+ 8-Plane 3D Graphics Module**

---

**8-to-24 Plane Upgrade**

The 8-to-24 plane upgrade kit (PMAG–G), plugs into the PXG+ module, not directly into the system, and is installed by Digital Services.

**24-Bit Z-Buffer Upgrade**

The 24-bit Z-buffer upgrade kit (PMAG–H) plugs into the PXG+ module, not directly into the system.
Description of Options

**PXG+ 24-Plane 3D Graphics Module**

The PXG+ 24-plane 3D graphics module (PMAGB-E) is the 24-plane 3D accelerator with Z buffer. This is the same as the PXG+ 8-plane module with the upgrade kit and Z-buffer installed. It occupies two adjacent slots in the system unit.

The module is shown in Figure 10–6. The upgrade kit parts are noted in the figure.

*Figure 10–6  PXG+ 24-Plane 3D Graphics Module*
The PXG Turbo+ 3D graphics module (PMAGB–F) is a high-performance, 96-plane 3D graphics accelerator. It occupies three adjacent slots in the left side of the system unit, and supports 72 Hz monitors.

The module is shown in Figure 10–7.

Figure 10–7 PXG Turbo+ Graphics Module
Description of Options

**FDDIcontroller Module**

The FDDI controller 700 communications adapter (DEFTA-A) provides standards-based network communications. It occupies one slot in the system unit.

The module is shown in Figure 10–8.

*Figure 10–8  FDDIcontroller Module*
### AUI Ethernet Module

The AUI Ethernet communications controller (PMAD–A) allows the system to connect to an AUI (thickwire) Ethernet network cable. It occupies one slot in the system unit.

The module is shown in Figure 10–9.

**Figure 10–9  AUI Ethernet Module**

![AUI Ethernet Module Image](MLO-007573)
Description of Options

Dual SCSI Module

The Dual SCSI (PMAZB–A) adapter is a TURBOchannel-to-SCSI controller that provides two additional 8-bit, 5-MB/sec SCSI ports. It occupies one slot.

The module is shown in Figure 10–10.

**Figure 10–10  Dual SCSI Adapter Module**
Description of Options

**NVRAM Module**

The NVRAM module (PMTNV-A) provides nonvolatile RAM storage for applications which require it. The module accommodates 1 MB of SRAM, and has lithium battery backup. It occupies 1 slot.

The module is shown in Figure 10–11.

**Figure 10–11 NVRAM Module**
Before Installing Modules

**Preparation**
Before installing certain modules, you may need to make sure that jumpers are set correctly or remove mechanical spacers. These procedures are explained in the following sections.

**HX Module Jumper Setting**
Before installing an HX module, refer to the documentation that came with your HX module to set the module jumper for your monitor.

**TX Module Modification**
Before installing a TX module, remove the screws and spacers on the rear corners of the module, the shaded items shown in Figure 10–12. Be careful to remove only the corner screws and spacers, not the ones adjacent to the corner spacers.

*Figure 10–12 TX Module Modification*
Before Installing Modules

**Dual SCSI Module Jumpers**

Before installing a Dual SCSI module, make sure that the jumpers are set correctly. Referring to Figure 10–13, make sure that the terminator jumpers 1 are in place. Make sure that the flash memory write jumper 2 is removed. The jumper rest 3 is for storing up to three unused jumpers.

![Figure 10–13 Dual SCSI Module Jumpers](MLO-009707)
Installation

Choosing a TURBOchannel Slot

The TURBOchannel modules plug directly into either the system module (3 slots) or the I/O module (2 slots). See Figure 10-1.

If you are installing options, you should consider the widths of the modules you plan to use, as well as where future options would be placed.

Installation Procedure

To install a TURBOchannel module, follow these steps:

1. Wear an antistatic wrist strap whenever you handle a module or work inside the system box. See Using An Antistatic Wrist Strap in Chapter 2.

2. Choose one or more unused TURBOchannel slots, as needed, considering the locations and sizes of existing modules. You may find that one or more existing modules need to be moved to make space for a new module.
3. Remove the two screws and metal plate at the chosen slot or slots, as shown in Figure 10–14. Save the plate, in case you remove a module later. Save the screws for attaching the new module to the system cabinet.

**Figure 10–14 Removing a Slot Plate**
4. Orient the new module as shown, inserting the module port through the slot, as shown in Figure 10–15.

**Figure 10–15 Seating a TURBOchannel Module**
5. Press the corners of the module over the mounting pins ①, seating the module connector with the connector on the system module or I/O module, as shown in Figure 10–16. When the module is seated, the pin latches ② will hold the module in place. Secure the module, using two screws for every slot ③.

Be sure to reconnect any pigtail connectors that were secured by the screws. (For more information on pigtail connectors, refer to the appendixes of the owner’s guide.)

Figure 10–16 Securing a TURBOchannel Module

Completion

This completes installation of a TURBOchannel module.

Removing a TURBOchannel Module

To remove a TURBOchannel module, follow these steps:

1. Refer to Chapter 2 to prepare your system.
2. Wear an antistatic wrist strap whenever you handle a module or work inside the system box. See Using An Antistatic Wrist Strap in Chapter 2.
3. Remove any cables that are attached to the module that is being removed.
4. Remove the slot screws that hold the module in place. See 1 in Figure 10–17.
Removing a TURBOchannel Module

5. Release the latches that hold the edge of the module in place, and carefully pull the module connector away from the connector on the system module or I/O module, as shown in Figure 10–17. If you are removing a 3-slot module, you may need assistance to release the six latches simultaneously and pull the module away from the system module or I/O module.

Figure 10–17 Removing a Module

6. Remove the module from the system box.
Removing a TURBOchannel Module

7. Replace the slot plates for all emptied slots, attaching the plates with two screws.

**Figure 10–18 Replacing a Slot Plate**

Completion

This completes removal of a TURBOchannel module.
Chapter Overview

This chapter covers the following topics:

- Storing the Wrist Strap
- Replacing Panels
- Restarting and Testing the System

Storing the Wrist Strap

Refold and store the wrist strap for future use, following these steps:

1. Remove the copper strip end of the strap from the power supply. Replace the paper covering on the sticky surface.
2. Unwrap the strap from your wrist.
3. Fold the strap, starting at the copper strip end. Use the folds in the strap as a guide.
4. Place the strap in the envelope and store it in a safe place.
Replacing Panels

To replace the panels, follow these steps, as needed:

**Step 1: Replace Front Panel**

To replace the front panel, hook the bottom of the panel 1 under the system, and push the top in until the latches 2 engage, as shown in Figure 11–1.

**Figure 11–1 Replacing the Front Panel**
Step 2: Replace Left Panel

To replace the left side panel, seat the bottom edge of the panel in the track, push down to set the panel, and press the top of the panel in, as shown in Figure 11–2.

Figure 11–2 Replacing the Left Side Panel
Replacing Panels

Step 3: Replace Right Panel

To replace the right side panel, seat the bottom edge of the panel in the track, push down to set the panel, and press the top of the panel in, as shown in Figure 11–3.

Figure 11–3 Replacing the Right Side Panel
Step 4: Replace System Cover

Replace the system cover by seating it on the top of the system and sliding it toward the rear, as shown in Figure 11–4. Make sure that the hooks face the rear, and that the lock on the cover is toward the rear of the system.

Figure 11–4 Replacing the System Cover
Replacing Panels

**Step 5: Lock Cover**

Lock the system cover, as shown in Figure 11–5.

**Figure 11–5  Locking the System Cover**
Restarting and Testing the System

Turning On
To start the system, turn on ( ) the equipment in the following order:
1. Monitor
2. Expansion boxes, printers and modems
3. System
Note that although expansion boxes, printers and modems can be turned on at any time, turning them on as listed here will ensure that they are configured when the system is turned on.

Console Prompt
When you turn it on, the system should give a display similar to the `show config` display, then stop at the console prompt. (If the system does not stop at the console prompt, it has been set to boot automatically. Press the halt button to get the console prompt.)

Recording Startup Messages
Write down any startup error messages. Refer to the DEC 3000 Model 500X AXP Owner's Guide for an explanation of common error messages and for more information about testing the system.
Restarting and Testing the System

**Testing Drive Installation**

To make sure that the drives are connected correctly, enter the `show device` command as explained in Chapter 2. Compare the latest configuration display with the display shown when preparing the system before adding a drive. You should see the new drive and all the drives that were present before the addition.

If a new drive was installed, but is not in the current display, it has not been installed properly.

Make sure that drives are set to the correct SCSI addresses.

Make sure that no error messages appear. Two question marks in the `show device` display identify an error in a drive. If any error messages appear, write them down.

If your display shows many lines with the same address in the ADDR column, two or more drives may have been installed with the same SCSI address, and you will need to change them to ensure that each drive has a unique address.

**Testing Memory Installation**

To make sure that the memory modules and MMBs are connected correctly, display the system configuration by using the `show memory` command as explained in Chapter 2. Compare the latest memory configuration with the display shown when preparing the system before adding any memory modules. You should see the current system memory. If the memory figure is incorrect, one or more memory modules have not been installed properly.

**Testing TURBOchannel Module Installation**

To make sure that the TURBOchannel modules are connected correctly, display the system configuration by using the `show config` command as explained in Chapter 2. Compare the latest configuration display (TCINFO and DEVNAM columns) with the display shown when preparing the system before adding a module. You should see the new module and all the modules that were present before the addition.

If a new module was installed, but is not in the current display, it has not been installed properly.
If the displays show an error, follow these steps, using the wrist strap:

1. Shut down the system hardware.
2. Make sure that all cables inside and outside the system are properly reconnected.
3. Make sure that all modules are fully seated in their connectors.
4. Make sure SCSI address switches and jumpers are set correctly; no two drives should be set to the same SCSI address.

If problems persist, refer to the troubleshooting section of your DEC 3000 Model 500X AXP Owner's Guide, or contact your Digital service representative.
Chapter Overview

This chapter gives a brief overview of the following external options:

- Console Terminal
- Dial Box
- Headset
- Modem
- Printer
- Programmable Function Keyboard (Button Box)
- Storage Expansion Box
- Tablet

Adding these options does not involve opening the system unit.

Future Options

The previous list represents the external options available when the DEC 3000 Model 500X AXP first shipped. Other options may be available at a later time.

For More Information

For specific information on installing and using these external options, consult the documentation that is shipped with the option, or contact your Digital sales representative.
A console terminal (VT420) is available for your DEC 3000 Model 500X AXP. See Figure 12–1.
The dial box (VSX30-AA), shown in Figure 12–2, is for special graphics applications on the DEC 3000 Model 500X AXP. It contains eight dials, each of which turns a continuously variable potentiometer. Each potentiometer is connected to an analog-to-digital converter. This option is compatible with the DEC OSF/1 operating system only.

Figure 12–2 Dial Box

The dial box is also available with the programmable function keyboard as VSX10-AA.
Headset

The headset (VSXXX-J A), shown in Figure 12–3, is for audio input and output.

Figure 12–3  Headset
Modem

A modem converts computer signals into signals that can be sent over a telephone line. Many modems will work with your DEC 3000 Model 500X AXP system. Contact your Digital sales representative for more information.

Figure 12–4 shows the port for connecting a modem cable to the DEC 3000 Model 500X AXP system unit.

Figure 12–4  Connecting a Modem Cable
Many printers will work with your DEC 3000 Model 500X AXP system. Contact your Digital sales representative for more information.

Figure 12–5 shows the port for connecting a printer cable to the DEC 3000 Model 500X AXP system unit. The server configuration uses an adapter and the port shown in Figure 12–4, as the port shown in Figure 12–5 is used by the console terminal.

**Figure 12–5  Connecting a Printer Cable**
The programmable function keyboard (button box, VSX20-AA), shown in Figure 12–6, is for special graphics applications on the DEC 3000 Model 500X AXP. This device contains an array of 32 lighted momentary-contact pushbutton switches. This option is compatible with the DEC OSF/1 operating system only.

Figure 12–6  Programmable Function Keyboard (Button Box)

The programmable function keyboard is also available with the dial box as VSX10-AA.
The DEC 3000 Model 500X AXP system is designed to operate with the BA350-SA storage expansion box, shown in Figure 12–7. This expansion box will allow the use of seven additional half-height drives, including the RZ25, RZ26, and TLZ06 drives. An optional pedestal mounting kit (BA350X-FA) is available for the BA350-SA storage expansion box.

For more information on this box and available options for it, see your Digital sales representative.

Figure 12–7  BA350–SA Storage Expansion Box
You can use either the standard mouse or an 11-by-11-inch tablet (VSXXX-AB) with a puck and pen pointers. See Figure 12–8.

**Figure 12–8 Tablet**

The tablet is connected to the mouse port on the mouse/keyboard cable.
Appendix Overview

Introduction

This appendix provides information about available documentation. For option and system hardware part numbers, consult your Digital sales representative.

Not all of the following documents are available in every country. Check with your Digital sales representative for availability.

In This Appendix

This appendix covers the following topics:

- Associated Printed Documents
- OpenVMS Documentation
- DEC OSF/1 AXP Documentation
Table A–1 lists the associated DEC 3000 Model 500/500S AXP documents available in printed form.

</table>
accelerator
A hardware graphics processor that produces faster images than a CPU and frees the CPU to do other work.

antistatic wrist strap
A grounded strap you connect to your wrist and to the system unit while handling internal devices that are sensitive to static. This strap prevents electrostatic discharge that could result in loss of data.

applications
Programs, such as a financial spreadsheet, that perform end-user tasks.

AUI (Attachment Unit Interface)
An IEEE Standard 802.3-compliant Ethernet network made of standard Ethernet cable, as opposed to ThinWire Ethernet cable. Also called standard Ethernet. Compare with ThinWire Ethernet network. See standard Ethernet network or thickwire Ethernet network.)

autoboot
The process by which the system boots automatically.

backup copy
A copy of files or software made for safekeeping. Making a backup copy of the data stored on your disk allows you to recover that data after an accidental loss. You can make backup copies on tape cartridges.
boot
Short for bootstrap, meaning to bring a device or system to a defined state where it can operate on its own.

bus
A group of signals consisting of transmission lines or wires to create a common channel or pathway. The bus interconnects either internal computer system components to provide communications paths for addresses, data, and control information or external terminals and systems in a communications network.

byte
A group of eight contiguous binary digits (bits). Bits are numbered from right to left, 0 through 7, with bit 0 being the low-order bit. See also kilobyte and megabyte.

cable
A sheathed group of electrical conductors.

caddy
The holder for an RRD42 compact disc.

CD
See compact disc.

CD–ROM
See compact disc read-only memory.

command
A request made to the operating system to perform a specific function, for example, a request to run a program or show the configuration of a system.

communications
The transmission of digital data from one point (the source) to another (the receiver).
compact disc
A removable flat circular plate, used in the compact disc drive on which read-only optical data is stored. A laser optical reader retrieves this information.

compact disc read-only memory
The removable disc used in the compact disc drive. Data can be stored on this disc and retrieved from it.

configuration
See system configuration.

connector
Hardware that connects directly to a port on the system.

console
A device through which an operator communicates with the computer.

console commands
Commands that you input when the system is in console mode.

console mode
The state in which the computer is controlled directly by user commands from the console terminal rather than indirectly through the operating system. Console mode is in effect when the system is turned on and the operating system software has not been started, or the operating system software has been interrupted by pressing the halt button on the system unit. Console mode is indicated by the console prompt (>>>) on the monitor screen. Compare with program mode.

console prompt
The prompt (>>>) that appears on the screen when the system is in console mode.

console terminal
The video or hardcopy terminal used to start the system and direct activities between the computer operator and the console subsystem.
DEC OSF/1 AXP operating system
A general-purpose operating system based on the Open Software Foundation OSF/1 1.0 technology.

default
A computer value or setting that is automatically in effect unless or until another value is specified. There are some default values that you cannot override.

device
The general name for any hardware unit connected to the system and capable of receiving, storing, or transmitting data. Examples of devices are drives and units that you can install into or externally connect to the system unit or an expansion box.

device name
The name by which a device or controller is identified in the system. The name that a particular operating system uses to access a particular storage device. Also called the device mnemonic.

disc
See compact disc.

disk
A flat circular plate with a magnetic coating on which data is magnetically stored in concentric circles (tracks). A fixed disk resides permanently inside a disk drive, whereas a diskette is removable.

disk drive
A device that holds a disk. The drive contains mechanical components that spin the disk and move the read and write heads that store and read the information on the surface of the disks.

diskette
A disk contained in a square jacket. Diskettes can be inserted and removed from diskette drives.
**diskette drive**
A disk drive that reads from or writes to a removable diskette, such as an RX26 diskette.

**Ethernet**
A local area network (LAN) or wide area network (WAN) that connects (by coaxial cable) multiple computers that are running a variety of network operating systems. Ethernet transmits 10 megabits per second and does not require switching logic or control by a central computer.

**file**
A collection of related information treated by the system as a unit.

**fixed disk**
A disk that resides permanently inside a disk drive. Compare with diskette.

**fixed disk drive**
The disk drive that holds and reads from or writes to a fixed disk.

**frame buffer**
An area of memory that contains a pixel-level description of a displayed image. The frame buffer is also used to refresh the raster display.

**gigabyte (GB)**
The measure used to refer to memory or secondary storage capacity, equal to 1,024 megabytes or 1,073,741,824 bytes.

**graphics**
A computer output of drawings, charts, and graphs.

**half-height disk**
Any 1 5/8-inch fixed drive that is 3½ inches (9-centimeters) wide, such as those in the RZ family; or a 1 5/8-inch removable drive that is 5 inches (12.7 centimeters) wide, such as a compact disc.
halt
The action of stopping the CPU from processing. This action brings the system under the control of the console program. A halt can occur when an internal system error is detected, when you enter the HALT command at the console terminal, or when you press the Halt button on the back of the system unit.

input/output (I/O) device
A piece of equipment that transmits data to (input) and from (output) the system. For example, a terminal or a mouse. See mouse.

kilobyte (KB)
The measure used to refer to memory or secondary storage capacity, equal to 1,024 bytes.

MB
See megabyte.

media
The physical material on which data is recorded, for example, magnetic disks, diskettes, and compact discs.

megabyte
A unit of measure equal to 1,024 kilobytes or 1,048,576 bytes.

memory
The area of the system that electrically stores instructions and data, often temporarily.

memory module
A single in-line memory module (SIMM) that contains memory for your system.

memory mother board
A main memory module that holds smaller memory modules.

MMB
See memory mother board.
modem
A device that converts computer signals to signals that can be sent over a telephone line.

module
An etched circuit board that contains electrical components and electrically conductive pathways between components on which logic devices (such as transistors, resistors, and memory chips) are mounted. A module stores data or memory or controls the functions of a device.

nonvolatile random-access memory
Memory, such as magnetic tape or core memory, in which values are stored even when the system is turned off.

NVRAM
See nonvolatile random-access memory.

online documentation
Documents that can be read directly on your monitor screen. Online documentation is stored on a compact disc and includes all text and illustrations found in the printed manuals. Fast access time and cross-referencing are two advantages of online documentation.

Open Software Foundation (OSF)
A foundation formed to develop a new operating system based on the UNIX standard.

operating system
An integrated collection of programs that controls the operation of the system and allows users access to data files, input/output devices, and application programs.

parity
A method for checking the accuracy of data by calculating the sum of the number of ones in a piece of binary data. Even parity requires the correct sum to be an even number; odd parity requires the correct sum to be an odd number.
peripheral device
An internal or external device that provides the central processing unit (CPU) with additional memory storage or communication capability. Examples are disk and diskette drives, video terminals, printers, and expansion boxes.

potentiometer
A variable electrical resistor used to control signals on the dial box.

power down
To initiate the sequence of steps that stops the flow of electricity to a system or its components.

power up
To initiate the sequence of events that starts the flow of electrical current to a system or its components.

prompt
A symbol or message displayed by a program or an operating system, asking you to provide input.

puck
A palm-sized device that slides on a tablet’s surface. The puck and tablet together function as a pointing device. See also pointing device and tablet.

random access memory (RAM)
Memory that can be both read from and written to and that can randomly access any one location during normal operations. The type of memory the system uses to store the instructions of programs currently being run.

removable-media drive
A drive such as the RRD42, TZK10, TZ30, TLZ06, or RX26 from which the storage medium is removable.
restore
In software, to recover files or software that were backed up, copying the material from the backup medium (such as a tape or diskette) to the medium you normally use.

In hardware, to return the system to an operating condition.

SCSI
See Small Computer System Interface.

SCSI bus
A communications pathway between the Small Computer System Interface (SCSI) and other internal devices. The SCSI bus consists of an address bus, which selects the location of the data, and a data bus, which transfers the data.

SCSI controller
The device that directs the operations of the Small Computer System Interface (SCSI) with synchronous and asynchronous capabilities.

SCSI jumpers
Removable electrical connectors on some of the drives, such as the RRD42, that determine the SCSI setting on a drive. Each installed drive must have a unique setting for proper communication between the system and all drives.

SCSI switches
Electrical switches on the side or back of some drives, such as the RX26, that determine the SCSI setting of the drive. Each installed drive must have a unique setting for proper communication between the system and all drives.

server
Hardware or software that provides a specific set of services to a satellite or client.

Small Computer System Interface (SCSI)
An ANSI-standard interface designed for connecting disks and other peripheral devices to computer systems. SCSI is used by many computer and peripheral vendors throughout the industry.
**smart frame buffer**
A separate memory component for graphics images.

**SRAM**
Static random-access memory.

**system**
A combination of hardware, software, and peripheral devices that together perform specific processing operations.

**system unit**
The part of the system that contains the drives, memory, power supply, and the computer itself.

**tablet**
An absolute-positioning input device composed of a flat-surfaced digitizing tablet that functions as a drawing surface. Two pointing devices, a puck and a stylus, are used with the tablet to move the cursor on the monitor screen, draw graphics, and make selections from the menu.

**tape cartridge**
Housing for magnetic tape. The cartridge contains a reel of tape and a take-up reel. A cartridge is similar to a cassette, but of slightly different design.

**tape drive**
A device that contains mechanical components and holds, turns, reads, and writes on magnetic tape.

**terminal**
A device for entering information into a computer system and displaying it on a screen. A typewriter-like keyboard, mouse, tablet or other pointing device is used to enter information.

**three-dimensional graphics**
Images that are displayed on the screen in 3D. 3D graphics require the use of the PXG+ or the PXG Turbo+ option and Software PEX (software PEX server). Software PEX allows a 3D application to run without specialized 3D hardware.
**TURBOchannel module**

High-performance interconnection hardware that allows you to use a variety of Digital and third-party graphics, multimedia, and communications options. The TURBOchannel module is a synchronous asymmetrical I/O channel that connects option modules to the system module. With this connection, the system module and an option module have read or write access to each other, but option modules have no access to other option modules.

**two-dimensional graphics**

Images that are displayed on the screen in 2D. 2D graphics require the use of the HX 8-plane smart frame buffer TURBOchannel graphics option.

**workstation**

A single-user system that offers high-performance, high-resolution graphics, and can function in a network environment.

**wrist strap**

See antistatic wrist strap.

**write-enabled**

The condition that enables a tape or diskette to be written to. Compare with write-protected.

**write-protected**

The condition that prevents a tape or diskette from being accidentally overwritten.

**Z-buffering**

An advanced graphics term for attaching a depth value to every pixel as a means of determining which parts of the objects in a scene must be discarded from the processing because they would be hidden from view by other opaque objects (hidden surface removal).
