## Preface

This manual describes how to install and test the VAX 4000 Model 100. It also refers to information on connecting the system to a network, connecting external options to the system, and booting the operating system.

### Audience

This manual is intended for anyone who wants to install the VAX 4000 Model 100. It is written for both experienced and inexperienced users.

### Structure of This Manual

This manual contains one chapter. Each section heading is a step in the installation procedure and is indicated by the word *step* and a numeral. Substeps in the procedure are indicated by a numeral.

### Additional Information

See the *VAX 4000 Model 100 Operator Information* manual for the list of associated and related documents.

## Conventions

The following conventions are used in this manual:

<b>Convention</b>	<b>Description</b>
MONOSPACE	Text displayed on the screen is shown in monospace type.
<i>italic type</i>	Italic type emphasizes important information and indicates the complete titles of manuals.
<b>Note</b>	A note contains information that is of special importance to the user.

# 1

---

## Installation Procedure

This chapter shows you, step by step, how to install the VAX 4000 Model 100.

### Step 1: Choosing a Suitable Location

Follow these guidelines when choosing where to place the system unit:

- Place the system unit where the room temperature is between 10°C and 40°C (50°F and 104°F) and the humidity is between 20% and 80%.
- Place the system unit at least 1 metre (3 feet) from heaters, photocopying machines, or other operating equipment.
- Place the system unit in a well-ventilated location.
- Place the system unit on a work surface that is raised above the floor.
- Do not place this unit on the top of any pedestal system.
- Keep the air vents on either side of the system unit clear.
- Do not expose the system unit to direct sunlight or abrasive particles.

---

**Note**

---

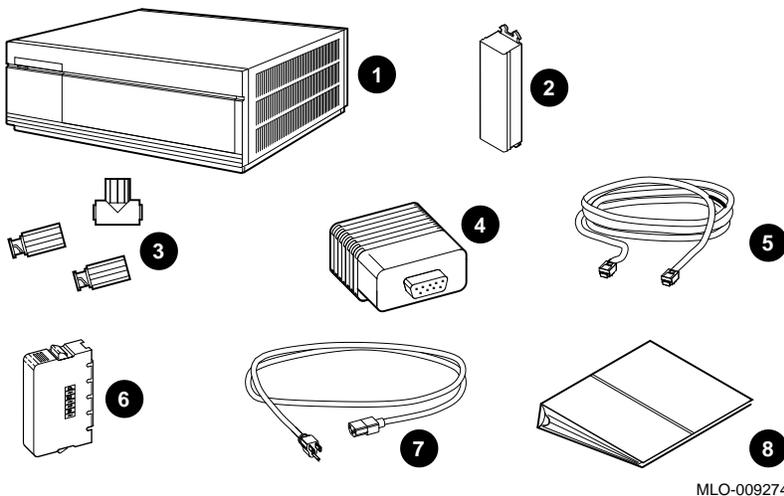

The console terminal is not supplied with the system.

---

## Step 2: Unpacking the System and Identifying the Parts

1. Unpack the system.
2. Make sure that you have all the parts listed on the packing slip. The loose-piece accessory kit is shipped with all basic systems. If you do not have all the parts listed, contact your Digital Sales representative.

Figure 1-1 The VAX 4000 Model 100 System

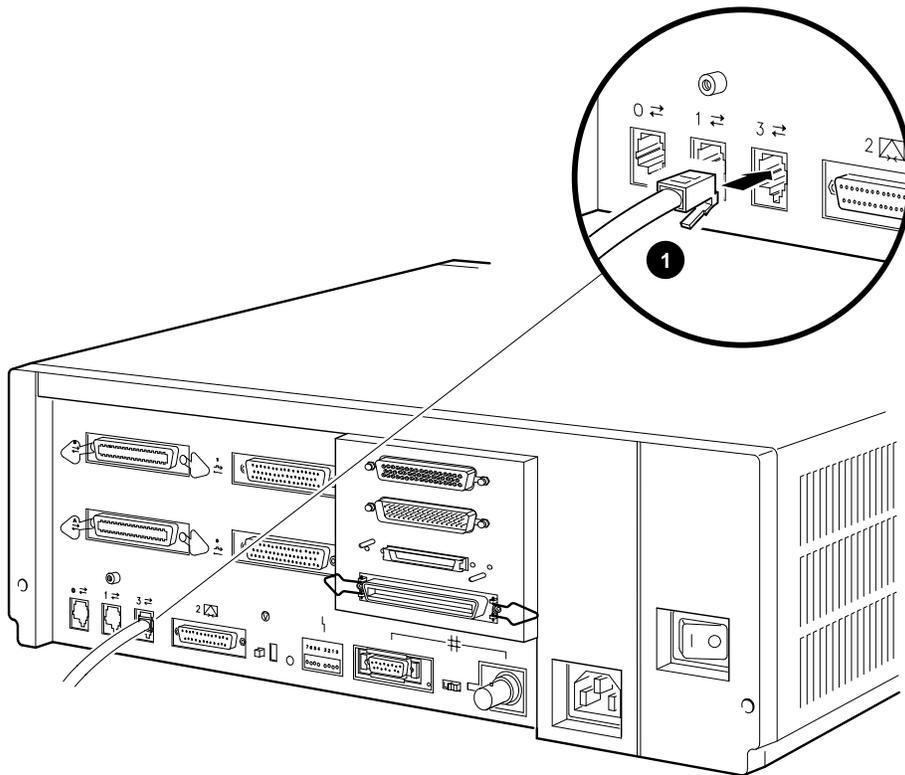

- 1 System Unit
- 2 SCSI Terminator H8574-A (PN 12-30552-01)
- 3 One ThinWire™ Ethernet T-Connector (H8223) and Two Terminators (H8225)
- 4 Standard Ethernet Loopback Connector (12-22196-01)
- 5 DEC423 Terminal Cable (BC16E-25)
- 6 DSSI Terminator (12-29258-01)
- 7 Power Cord
- 8 Documentation and Software Licenses

### Step 3: Connecting the Console Terminal

1. Connect one end of the terminal cable to the modified modular jack (MMJ) port 3. This system will be shipped with a label covering ports 0 and 1. After port 3 is properly identified as the console port, the OPA0 arrow label may be removed.
2. Connect the other end of the terminal cable to a DEC423 (MMJ) communications port on the console terminal.

Figure 1-2 Console Connection

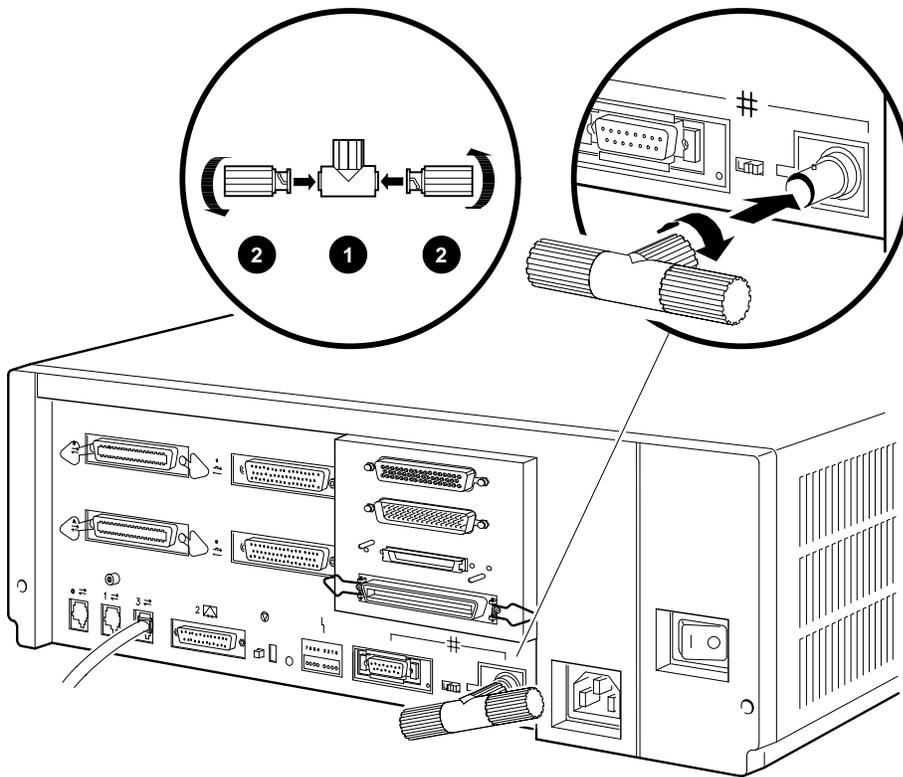

MLO-009275

① Terminal Cable

## Step 4: Connecting the ThinWire Terminator

1. Assemble the T-connector and the two terminators to form a ThinWire terminator.
2. Connect the ThinWire terminator to the system unit.

Figure 1–3 ThinWire Termination

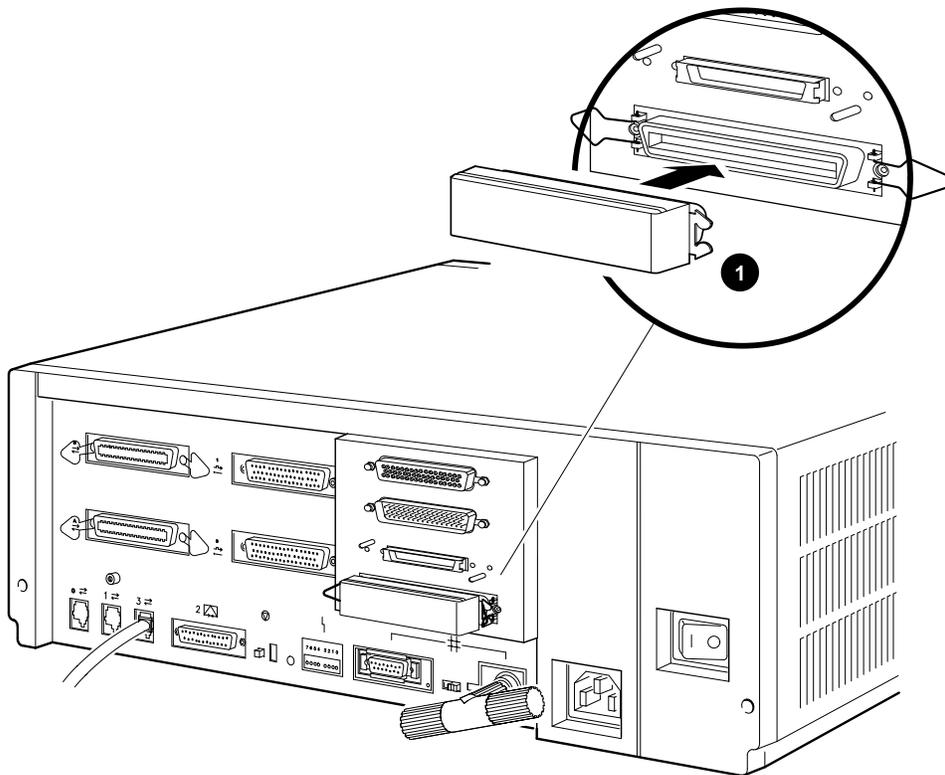

MLO-009276

- ① T-Connector
- ② Terminator

## Step 5: Connecting the SCSI Terminator

1. Connect the SCSI terminator to the SCSI port.
2. Close the bail lock loops.

Figure 1-4 Connecting the SCSI Terminator

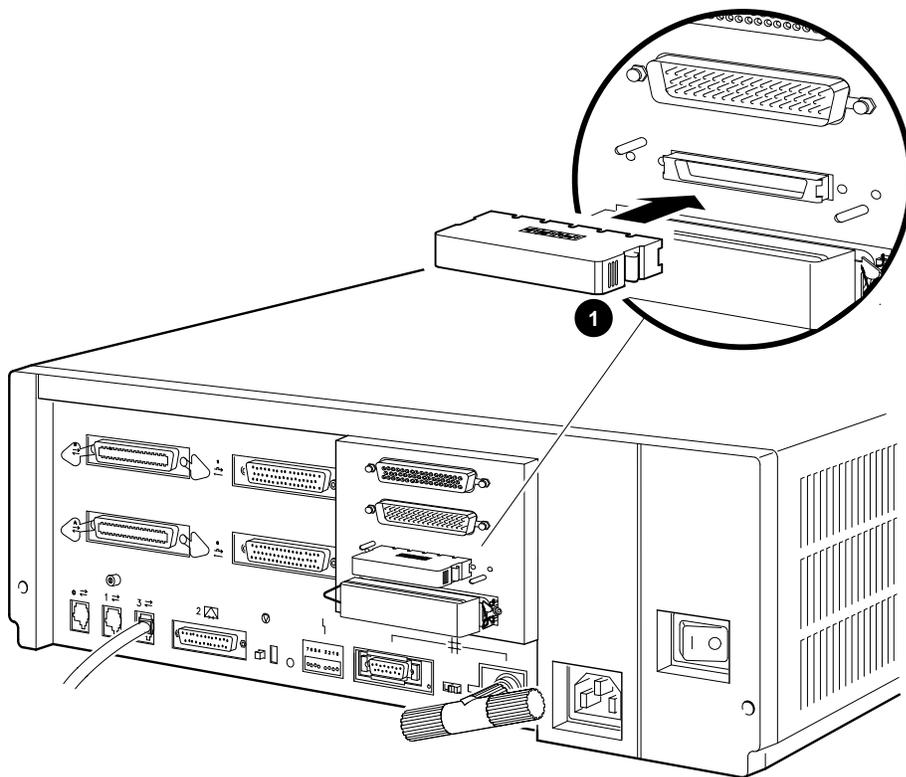

MLO-009696

❶ SCSI Terminator

## Step 6: Connecting the DSSI Terminator

Figure 1-5 Connecting the DSSI Terminator

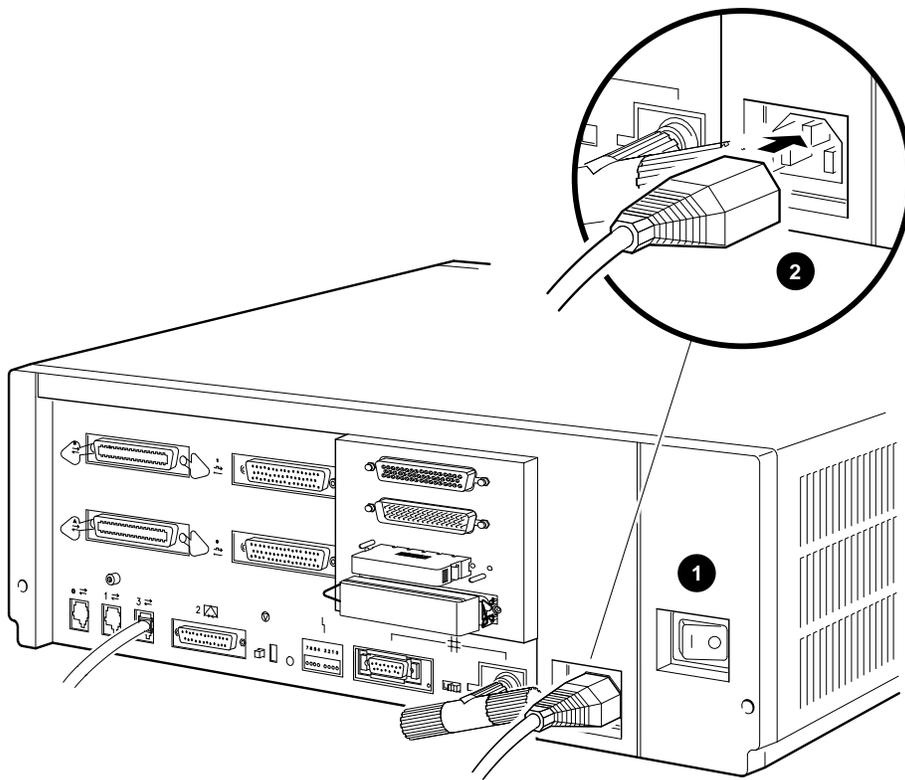

MLO-009697

❶ DSSI Terminator

## Step 7: Connecting the Power Cord

1. Ensure that the on/off switch is in the off (O) position.
2. Connect the power cord to the system unit.
3. Connect the other end of the power cord to an isolated, grounded circuit.

Figure 1–6 Power Cord Connection

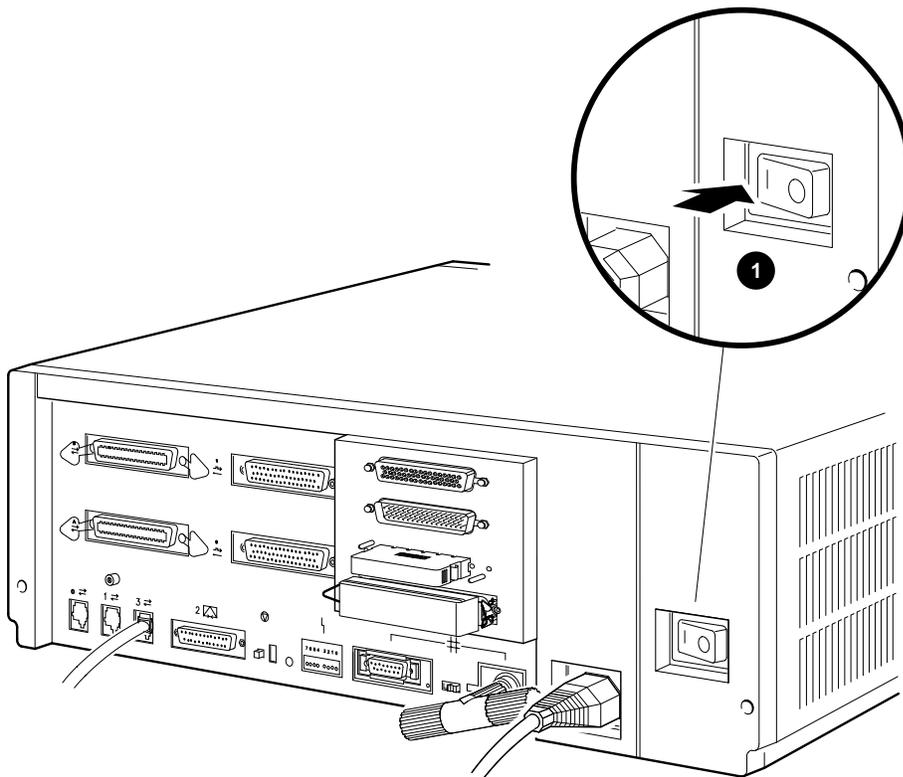

MLO-009277

- ❶ On/Off Switch
- ❷ Power Cord

## Step 8: Turning on the Console Terminal and System Unit

1. Turn on the console terminal. Wait until it completes its power-up test. (See the terminal documentation for more information.)
2. Check the terminal settings. See the *VAX 4000 Model 100 Operator Information* manual for the list of correct settings.
3. Turn on the system unit by setting the on/off switch to the on ( | ) position.

Figure 1-7 Power Turn On

MLO-009278

❶ On/Off Switch

## Step 9: Checking the Power-Up Test Results

The power-up test can take several minutes to complete, depending on the number of installed options and on which default settings you use.

1. If the power-up test results on the screen are similar to the results in Example 1–1, the system has passed the power-up test. Go to step 9.
2. If the power-up test results on the screen are not similar to the results in Example 1–1, the system has not passed the power-up test. See Example 1–2 for a typical failure.

### Example 1–1 Successful Power-Up Test Screen

---

#### Note

---

If a failure occurs, refer to *VAX 4000 Model 100 Troubleshooting and Diagnostics Information* manual.

---

## **Step 10: Connecting the System to a Network**

If you want to connect the system to a network, see the *VAX 4000 Model 100 Operator Information* manual.

## **Step 11: Connecting External Options to the System**

If you want to connect external options to the system, see the *VAX 4000 Model 100 Operator Information* manual.

## **Step 12: Booting the Operating System**

The system is supplied with factory installed software (FIS) on the system disk. Boot the operating system following the procedures in the *VMS™ Factory Installed Software User Guide*.
