LN17 and LN17ps Printer Models

This book is for use with both the Digital LN17 and LN17ps High Performance Network Printers. The LN17ps printer contains all the components of the LN17 printer, plus the following options:

- Adobe PostScript Level 2
- 4 MB additional memory
- DNIC-E’NET (Digital Network Interface Card for Ethernet)

As this guide serves both printers, the LN17ps printer will hereafter be referred to as the LN17 printer.
How Much of This Book Must I Read?

You do not have to read any of this guide to use your LN17 printer. The LN17 printer is ready to go after you set it up following the instructions in the Setting Up Guide.

Use this guide as a reference for:

- Learning about special printer features [“Special Features” (page 1-6)]
- Tips on taking care of the printer [“Maintaining the Printer” (page 1-13)]
- Paper specifications, loading paper, and duplex printing (Chapter 2: Paper Handling)
- Instructions on using the Control Panel (Chapter 3: Using the Control Panel and Appendix D: Control Panel Options)
- Installing printer drivers (Chapter 4: LN17 Printer Driving Software)
- Downloading fonts (Chapter 5: Using the Hard Drive/Downloading Fonts)
- Troubleshooting printing problems if they occur (Chapter 6: Troubleshooting)
- Ordering printer options (Appendix A: Ordering Printer Options)
- Replacing consumables (Appendix B: Replacing Consumables)
- Installing and removing printer options (Appendix C: Installing and Removing Printer Options)
- Printer specifications (Appendix F: Printer Specifications)

E  Network Ports (Options)
F  Parallel Port
G  Controller Assembly

The major printer components are indicated below.

Figure 1.1  Major printer components
Special Features

Several features have been designed into the LN17 printer to enhance your printing environment. Using the printer’s Control Panel menu system, you can tailor printer settings to match your printing requirements.

See Chapter 3: Using the Control Panel for more information about the Control Panel and its menu system.

Power Saver

After 60 minutes of inactivity, the printer automatically turns off internal components to reduce the amount of electricity used. The printer automatically turns those parts back on when it receives a print job.

Using the printer’s Control Panel menu system, you can send the printer into Power Saver mode after your choice of 15, 30, 60, 90 or 120 minutes of inactivity (or Power Saver mode can be disabled).

See the section “System Menu” (page 3-24) in Chapter 3: Using the Control Panel.

High Resolution Printing

The LN17 printer is set to print at 600 x 600 dpi (dots per inch). You can change this setting to 1200 x 600 dpi to enhance grayscale images.

For professional quality printouts, the Print Quality option (in the PCL Emulat and PostScript menus) is set to TrueRes. The TrueRes setting smooths edges to produce a crisper looking printout.

If you want to print draft-quality jobs, set Print Quality to Toner Saving. The printer automatically reduces the amount of toner used (and prints a lower-quality output).

Edge to Edge Printing

For those instances when you need to print PCL 5e Emulation (hereafter referred to as PCL) jobs all the way to the edge of the page, turn on the Edge to Edge option in the PCL Emulation Menu. Edge to edge printing is always available for PostScript jobs and requires no setting. Just format your document to the edge of the page.

Automatic Tray Switching

The LN17 printer allows you to set automatic tray switching for both PCL and PostScript (when PostScript is installed) jobs. When tray switching is on, and the paper tray runs out of paper, the printer automatically switches to another paper tray (if another tray is loaded with the same size paper). That means you don't have to load paper as often. You can also install one or two optional 500-sheet Paper Deck and Cassette(s) (lower trays) to extend your printing capacity.

For more information on tray switching, see the section “Automatic Tray Switching” (page 2-13) in Chapter 2: Paper Handling.

Automatic Language Sensing and Switching

When you have installed the PostScript option, the printer can process both PCL and PostScript jobs. When the printer's Language Sensing option is on, the LN17 printer samples the incoming data stream to determine which language the print job requires. The LN17 printer then switches to the proper language for that job.

The LN17 printer can have up to three active ports when you install two optional network interface cards. Turn the Language Sensing option on for all the ports, and the printer automatically samples each print job and switches to the appropriate processing language.

For more information about language sensing and switching, see Appendix D: Control Panel Options.
Special Features

State Saving

When you are printing both PostScript and PCL jobs, the printer clears any downloaded fonts, macros, and PostScript headers when it switches between PostScript and PCL 5e Emulation. However, you can set the printer’s State Saving option to On, and the printer will save downloaded fonts, macros, and PostScript headers when it switches PDLs (Printer Description Language). This saves you from having to download fonts, macros, and headers every time the printer switches between PostScript and PCL 5e Emulation.

Printer Generated Reports

Using the printer’s Control Panel, you can print five separate reports.

- The Demo Page provides a sample of the printer’s capabilities and lists the printer’s key features.
- The Configuration Sheet lists the options you have installed and the current settings for each option in the Control Panel’s menu system.
- The PCL Font List shows which PCL fonts are currently available. The list includes resident fonts and downloaded fonts.
- When PostScript is installed on the LN17 printer, the PostScript Font List shows which PostScript fonts are currently available. The list includes both resident and downloaded fonts.
- The Test Print is used by service and repair technicians if problems occur with the printer.

See Appendix D: Control Panel Options for more information about these reports.
Optional Features

Several optional features are available to enhance your printing capabilities.

### Table 1.1 Locating Information on Printer Options

<table>

</tr>
<tr>
<td>Associated menu options</td>
<td>Chapter 3: Using the Control Panel</td>
</tr>
</tbody>
</table>

### PostScript Option

Installing the PostScript option adds PostScript Level 2 capability and additional memory to your printer.

See Appendix A: Ordering Printer Options to order the PostScript SIMM.

### Duplex Printing

The LN17 printer can print two-sided documents when you install the optional Duplex Module. After installing the Duplex Module and an LN17 printer driver, printing a two-sided document is as easy as printing a one-sided job.

See Appendix A: Ordering Printer Options to order a Duplex Module.

### Increased Paper Handling

An optional 500-sheet lower tray (the 500-sheet Paper Deck and Cassette) is available for the LN17 printer. Install two lower trays and you increase the input capacity for the LN17 printer by 1,000 sheets.

See Appendix A: Ordering Printer Options to order a Lower Tray.
Optional Features

Collating and Offsetting

Two optional output trays are available for the LN17 printer that provide a second output destination for your print jobs. Send your print job to the standard output tray or either optional output tray.

- The Offset Catch Tray (OCT) sits above the standard output tray. It increases the output tray capacity for the printer and offsets jobs from each other.
- The 10-bin Mailbox/Collator sits atop the standard output tray. You can use this as a 10-bin privacy-protected mailbox for multiset collation.

See Chapter 2: Paper Handling for more information about using the Offset Catch Tray and Mailbox/Collator.

See Appendix A: Ordering Printer Options to order an Offset Catch Tray or a Mailbox/Collator.

Memory Expansion

The LN17 base printer has 2 MB resident memory and can be increased with available 4 MB, 16 MB, and 32 MB SIMMs.

See Appendix A: Ordering Printer Options to order more printer memory.

Hard Drive

A hard drive is also available for the printer. The hard drive can be used for print spooling, font storage, macro storage, and state saving.

See Chapter 5: Using the Hard Drive/Downloading Fonts for more information about the hard drive.

See Appendix A: Ordering Printer Options to order a hard drive.
Memory Considerations

In today’s printing environments, technologies have advanced greatly. Corresponding memory requirements have increased too.

- LN17 printing features such as Page Protection and State Saving, when on, use available printer memory—memory that is otherwise used for processing jobs.
- Downloading fonts also uses available printer memory.

If you plan to print highly complex jobs or need features like State Saving and Page Protection, you may need to add printer memory.

Table 1.2 on page 1-12 lists the memory required when printing one-sided jobs at both 600 x 600 dpi and 1200 x 600 dpi.

Table 1.3 on page 1-12 lists the memory required when printing two-sided jobs at both 600 x 600 dpi and 1200 x 600 dpi.
### Memory Considerations

Maintaining the Printer

Maintaining the printer in good operating condition is essential to having a reliable, well-running machine.

Cleaning the Printer

For optimum performance, do not place the printer near vents or dust-producing equipment. Particles in the air may enter the printer and cause failures in internal mechanisms.

For best results, clean the outside of the printer with a damp cloth. Power the printer off before cleaning. Do not use detergents.

Replacing the EP Cartridge

An EP (electronic printing) cartridge will print approximately 10,000 pages of A4 or 8.5 x 11 paper under average operating conditions (5% image area coverage). The number of prints per cartridge will decrease if you routinely:

• Print dense text and graphics.
• Set Print Density (in the System Menu) to a dark setting.
• Exceed five percent area coverage.

Replace the EP cartridge as soon as you see the following message at the printer's Control Panel display:

Toner Low

See Appendix A: Ordering Printer Options for ordering a new EP cartridge.

Recycling the EP Cartridge

The LN17 printer EP cartridge can be recycled free of charge to you. Follow the instructions packaged with your new EP cartridge to recycle the old one.
Replacing the Fuser Cartridge/Bias Transfer Roll

The Fuser Cartridge and Bias Transfer Roll (BTR) have expected useful lives of 200,000 prints. When this point is reached, you will see the following message at the printer’s Control Panel display:

Replace
Fuser Cartridge

Although printing can continue, to ensure optimum print quality, you should order and replace these parts as soon as possible. See Appendix A: Ordering Printer Options for ordering information.
If you are unable to resolve a printing problem using the instructions in Chapter 6: Troubleshooting, contact the dealer from which you bought your printer or contact Digital.

Before contacting your dealer or Digital, please have the following information available:

• Printer serial number.
• A Configuration Sheet
• Any error code or message displayed on the Control Panel
• A description of the problem
• Type of network (if problem is network related)
Transporting the Printer

When transporting the printer more than a short distance, use the original shipping box and packaging materials. If the original shipping box or materials are not available, use a sturdy packing box and a generous amount of cushioning or packing materials.

To prepare your printer for transportation, follow the instructions below.

1. **Power off the printer and disconnect the power cord and all interface cables.**

2. **Remove any paper handling options and repack each in its original packaging.**

3. **Remove the hard drive (if it is installed), and repack it in its original packaging.** See Appendix C: Installing and Removing Printer Options.

4. **Remove the EP cartridge and pack it in its original packaging.**

5. **Pack the printer with the sealed EP cartridge and power cord in the original printer box.**

If you need to return the printer for service, follow the instructions of your service provider for packing and shipping.

† Optional paper handler. See Appendix A for ordering information.
‡ Although the OCT will accept all paper sizes listed, it can only offset A4, Letter, Folio, and Legal.
†† Only the main tray accepts Executive.
Storing Paper

The LN17 printer's print quality is optimized when paper and other print media are properly stored. Proper storage ensures optimum print quality and trouble-free printer options.

- Store the paper on a flat surface, in a relatively low humidity environment.
- Do not unwrap paper until you are ready to use it, and rewrap any paper you are not using.
- Do not expose paper to direct sunlight or high humidity.
Using the Main Tray or Lower Tray

Paper and other print media are loaded into the main and lower trays identically. Refer to Table 2.1 on page 2-3 for acceptable paper sizes.

- The main tray holds 250 sheets of 75 g/m² (20 lb) paper.
- The optional lower tray holds 500 sheets of 75 g/m² (20 lb) paper.

Consult Figure 2.1 for proper orientation of letterhead and drilled paper.

Figure 2.1 Main/lower tray paper orientation
Using the Main Tray or Lower Tray

Figure 2.1  Main/lower tray paper orientation (continued)

Drilled Paper
(Simplex or Duplex)

Do not load the main tray or lower tray during printing.

Caution
Adjusting the Main Tray for Paper Size

End guides (A) and (B) slide to fit the length of the paper.
• When going from smaller to larger, slide end guide (A) first.
• When going from larger to smaller, slide end guide (B) first.

The width guide (C) slides to fit the width of the paper.
The size lock button (D) depresses to release end guide (A).
Adjusting the Lower Tray for Paper Size

Figure 2.3 Lower tray paper adjustment guides

A  End guide
B  Width guide

The end guide (A) slides to fit the length of the paper.
  • First lift up one side of the end guide at the rear of the tray.
  • Then lift up the other side of the end guide at the rear of the tray.
  • Then pull out the tray to lengthen it, or push it in to shorten it.

The width guide (B) slides to fit the width of the paper.
Using the Front Tray

The front tray accepts all paper sizes and types listed in Table 2.1 on page 2-3. The front tray holds:

• 100 sheets of 75 g/m² (20 lb) paper
• 50 sheets of 180 g/m² card stock
• 30 transparencies or 25 sheets of label paper
• 10 envelopes

Consult Figure 2.4 for proper orientation of letterhead, drilled paper, envelopes and postcards in the front tray.

Note

The size of paper loaded in the front tray of the printer should match the size entered as “Manual Size” in the PostScript or PCL menu at the front panel.

A paper jam may result if the printer expects longer or shorter media than is actually loaded. When you load a new size paper in the front tray, change the “Manual Size” entry in the PostScript or PCL menu to match this new size.

Figure 2.4 Front tray paper orientation

Letterhead (Simplex)  Letterhead (Duplex)
Using the Front Tray

Figure 2.4  Front tray paper orientation (continued)

† Orientation may differ for PostScript jobs. Test your application.
Loading the Front Tray

1. Press the top of the front tray to open it, then pull out the tray extension.

2. Slide the side guide (A) to the far right. Flip open the extension bar (B) if feeding long paper. Pull out the envelope stopper (C) if feeding envelopes.

3. Fan transparencies and label paper before loading in the tray.

4. Insert paper along the left side of the tray, under the plastic maximum fill tab (A).
Using the Front Tray

5 Adjust the side guide to the size of the paper loaded in the front tray.

6 When feeding envelopes, slide the end of the envelope stopper over the end of the envelope stack.

   The envelope stopper keeps envelopes from backing out of the stack while feeding.

7 Because the front tray does not have a paper size sensor, you must tell the printer which size paper is loaded. Set the following options after loading paper in the front tray:

   • For PCL jobs, set the Front Tray Size option to the size paper loaded in the front tray.
   • For PostScript jobs, set the Manual Size option to the size paper loaded in the front tray.

See Chapter 3: Using the Control Panel for instructions on accessing the PCL Emulat and PostScript menus.
Automatic tray switching is available for both PCL emulation and PostScript jobs. Tray switching is useful for:

- Increasing paper capacity.

  When the current paper tray runs out of paper, the printer automatically switches to the next tray in the sequence, provided the paper size in the next tray is the same size as that in the current tray.

- Searching for the correct paper size.

  If the paper size specified in your software application does not match the size paper loaded in the current paper tray, the printer automatically searches the next tray in the sequence for a paper size that matches.

The **Tray Switching** option (in the PostScript Menu) can be set to any of the settings shown in Table 2.2 below.

### Table 2.2 Tray switching settings

<table>
<thead>
<tr>
<th>Tray Switching Setting</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Off</td>
<td>Standard Tray Switching selections for PostScript jobs</td>
</tr>
<tr>
<td>Main-Front Tray</td>
<td></td>
</tr>
<tr>
<td>Lower 1-Main</td>
<td>Additional Tray Switching setting that appears when a 500-sheet Paper Deck and Cassette is installed</td>
</tr>
<tr>
<td>Lower 2-Main</td>
<td></td>
</tr>
<tr>
<td>Lower 1-Lower 2</td>
<td></td>
</tr>
<tr>
<td>Lwr1-Lwr2-Main</td>
<td>Additional Tray Switching settings that appear when a second 500-sheet Paper Deck and Cassette is installed</td>
</tr>
</tbody>
</table>

For example, when Tray Switching is off, no tray switching occurs. When set to Main-Front the printer automatically switches to the front tray when the main tray becomes empty (provided the correct size paper is in both trays).
**Automatic Tray Switching**

**PCL Tray Switching (Source Mapping)**

Tray switching for PCL emulation jobs is controlled by the settings for Source Mapping (in the PCL Emulat Menu). (See Chapter 3: Using the Control Panel for information on using the Control Panel.)

- If you are familiar with the concept of source mapping, skip to “Default Source Mapping Settings” (page 2-16) and “Customizing Source Mapping Settings” (page 2-16).
- If source mapping is a new concept to you, continue reading.

When you send a PCL job to the printer, commands in the data stream tell the printer what logical paper source to use and on what size paper to print. The way in which the printer interprets the PCL command for paper source and page size depends on the PCL Emulat Menu settings for Source Mapping and Paper Size.

If the printer receives no paper tray or paper size information from your software application, it uses the PCL Emulat Menu settings for Paper Size and Default Source.

PCL recognizes the six paper sources shown in Table 2.3. (These PCL paper sources may, or may not, appear in your software application, or they may appear under alternate names.)

**Table 2.3 Six PCL paper sources**

<table>
<thead>
<tr>
<th>PCL Paper Source</th>
<th>Alternate Names</th>
</tr>
</thead>
<tbody>
<tr>
<td>Upper</td>
<td>Main Tray, Paper Tray, Paper Cassette</td>
</tr>
<tr>
<td>Manual</td>
<td>Front Tray, Manual Feed</td>
</tr>
<tr>
<td>Manual Envelope</td>
<td>Envelope Manual Feed</td>
</tr>
<tr>
<td>Lower</td>
<td>Lower Tray</td>
</tr>
<tr>
<td>Large Capacity</td>
<td>Paper Deck</td>
</tr>
<tr>
<td>Envelope Feeder</td>
<td>N/A</td>
</tr>
</tbody>
</table>
When you choose, for example, “Main Tray” or “Paper Tray” as the paper source in your application, the PCL data stream tells the printer to print using paper from the “Upper” paper source.

The printer’s Source Mapping option maps the PCL paper source command to the paper trays on the printer. If, for example, the “Upper” source is mapped to the printer’s main tray, the printer will feed paper from the main tray whenever you choose “Upper,” “Main Tray,” or “Paper Cassette” in your application.

Table 2.4 lists the Source Mapping settings that can be set for each of the PCL paper sources in Table 2.3.

**Table 2.4 Source Mapping settings**

<table>
<thead>
<tr>
<th>Source Mapping Setting</th>

Customizing Source Mapping Settings

You may change the Source Mapping settings to best fit your printing needs. For example, you may want the printer to automatically feed from the front tray when the main tray becomes empty. The Source Mapping examples shown next in this guide can help you customize Source Mapping settings for your printing environment.
Example: Main Tray-Front Tray

Table 2.6 below shows how to set the Source Mapping settings so that the printer pulls paper first from the main tray and then from the front tray.

Regardless of the source you choose from your application, the printer will always pull paper first from the main tray. When the main tray is empty, the printer will pull paper from the front tray.

Table 2.6 Source Mapping settings for tray switching between the main and front trays

<table>
<thead>
<tr>
<th>PCL Paper Source</th>
<th>Source Mapping Setting</th>
</tr>
</thead>
<tbody>
<tr>
<td>Upper</td>
<td>Main-Front Tray</td>
</tr>
<tr>
<td>Manual</td>
<td>Main-Front Tray †</td>
</tr>
<tr>
<td>Manual Envelope</td>
<td>Main-Front Tray</td>
</tr>
<tr>
<td>Lower</td>
<td>Main-Front Tray</td>
</tr>
<tr>
<td>Large Capacity</td>
<td>Main-Front Tray</td>
</tr>
<tr>
<td>Envelope Feeder</td>
<td>Main-Front Tray</td>
</tr>
</tbody>
</table>

† Set this to Front if you want to print special paper through the front tray.
Automatic Tray Switching

Example: Lower Tray-Main Tray
Suppose you have a lower tray installed and you want to maximize the paper supply. But you also want to print special paper, such as envelopes or labels, through the front tray.

Table 2.7 below illustrates how to set the Source Mapping settings so that the printer switches between the lower and main trays as one tray becomes empty, yet leaves the front tray available.

Table 2.7 Source Mapping settings for tray switching between the lower and main trays

<table>
<thead>
<tr>
<th>PCL Paper Source</th>
<th>Source Mapping Setting</th>
</tr>
</thead>
<tbody>
<tr>
<td>Upper</td>
<td>Lower 1-Main</td>
</tr>
<tr>
<td>Manual</td>
<td>Front Tray</td>
</tr>
<tr>
<td>Manual Envelope</td>
<td>Front Tray</td>
</tr>
<tr>
<td>Lower</td>
<td>Lower 1-Main</td>
</tr>
<tr>
<td>Large Capacity</td>
<td>Lower 1-Main</td>
</tr>
<tr>
<td>Envelope Feeder</td>
<td>Front Tray</td>
</tr>
</tbody>
</table>

When using the settings in Table 2.7, choose Upper, Lower, or Large Capacity (or an equivalent paper source, as shown in Table 2.3 on page 2-14) to engage tray switching. To print a job on special paper, choose Manual, Manual Envelope, or Envelope Feeder as the paper source in your application.
Using the Mailbox/Collator

The Mailbox/Collator (Figure 2.5) is an optional output device available for the LN17 printer. It accepts only A4 and Letter paper sizes.

(See Appendix A for ordering information; Appendix B for installation instructions.)

Figure 2.5  Mailbox/Collator (front view)

- Bin Unlock button
- Open bin indicators
- Power switch

The Mailbox/Collator offers the following capabilities:

- Printing multiple collated sets (2 to 10 sets) of a job. See “Printing to the Mailbox/Collator” (page 2-20).
- Directing output to a specific mailbox bin. See “Printing to the Mailbox/Collator” (page 2-20).
- Printing secure jobs. See “Password Protecting Jobs” (page 2-20).

With the Mailbox/Collator installed, the standard output tray still functions normally. The Mailbox/Collator gives you approximately 50 sheets per bin of letter/A4, 20 lb (75 g/m²) weight paper for a maximum output of 500 sheets. The standard output tray adds another 250 sheets.
Using the Mailbox/Collator

Printing to the Mailbox/Collator

Using an LN17 printer driver, select a specific “Bin” or “Collator” as the paper output destination for your job, then print your job.

- Bins are numbered from 1 - 10 (top to bottom).
- Each bin can hold up to 50 sheets of 20 lb (75 g/m²) paper. When a bin becomes full:
  - the remainder of the print job is diverted to the top output tray when the Bin Full option (in the Mailbox Menu) is set to Send to Standard.
  - printing stops when the Bin Full option is set to Stop Printing. Once you remove the output, the printer resumes printing.

Password Protecting Jobs

Using the LN17 Control Panel, you can set a different password for each mailbox bin and one password for the collator mode. A job sent to a password-enabled bin can only be removed by the individual with the bin password; a job sent to the collator can only be removed from the password-enabled collator mode by the individual with the collator password.

Digital recommends that you use the Mailbox/Collator exclusively in either collator mode or bin mode, not both, if you plan to set passwords. The only way to control the mode in which it is used is through the use of passwords. If passwords are enabled for bins but disabled for collator, jobs sent to password-enabled bins can be removed by anyone who chooses “collator” as the output tray (because no password is needed). For this reason, Digital recommends you either enable or disable passwords for both bins and collator mode.

- If you plan to use passwords for bins, also set a password for collator mode. Distribute individual bin passwords to the appropriate users. Do not distribute the password for collator mode.
- If you plan to use a password for collated jobs, also set passwords for each bin. Distribute the collator password.
Using the Mailbox/Collator

to the appropriate users. Do not distribute individual bin passwords.

See “Enabling Passwords” (below) and “Disabling Passwords” (page 2-23) for instructions.

Enabling Passwords

Follow the instructions below to set passwords.

1 Power ON the printer.
   The printer will complete its self-test and display the following message at the Control Panel Display:
   
   Online
   Ready

2 Press Online ➔, then Menu ➔ and you will see:
   
   Main Menu
   Language

3 Press Down ▼ until you see:
   
   Main Menu
   Mailbox Menu

4 Press Enter ➔ and the display changes to:
   
   Mailbox Menu
   Collator

   To set a collator password, continue to Step 5.
   To set a bin password, skip to Step 6.

5 Press Enter ➔ and the display changes to:
   
   Collator
   Enable Password

   Skip to Step 9.

6 Press Down ▼ until you see:
   
   Mailbox Menu
   Mailbox
Using the Mailbox/Collator

7 Press Enter \( \Rightarrow \) and the display changes to:

```
Mailbox
Bin 1
```

8 Press Down \( \Downarrow \) or Up \( \Uparrow \) to select the appropriate bin. Then press Enter \( \Rightarrow \).

The display changes to:

```
Bin N
Enable Password
```

9 Press Enter \( \Rightarrow \) again and the display changes to:

```
Enter Password
>> XXXX
```

10 Enter the existing password using the numbered keys on the Control Panel.

The initial passwords for each bin after installing the Mailbox/Collator for the first time are:

- Collator: 0000
- Bin 1: 0001
- Bin 2: 0002
- Bin 3: 0003
- Bin 4: 0004
- Bin 5: 0005
- Bin 6: 0006
- Bin 7: 0007
- Bin 8: 0071
- Bin 9: 0072
- Bin 10: 0010

After entering the correct password, the display changes to:

```
New Password
>> XXXX
```

11 To enable the existing password, enter it again. To set a new password, enter a new password, then press Enter \( \Rightarrow \).

The password is now enabled.

12 Press Online \( \Rightarrow \) to bring the printer back online.

The Mailbox/Collator is now set up for use. The display should read:

```
Online
Ready
```
Disabling Passwords

Follow the instructions below to disable passwords.

1. **Power ON the printer.**
   
   The printer will complete its self-test and display the following message at the Control Panel Display:
   
   ```
   Online
   Ready
   ```

2. **Press Online ➔, then Menu ➔ and you will see:**
   
   ```
   Main Menu
   Language
   ```

3. **Press Down ▼ until you see:**
   
   ```
   Main Menu
   Mailbox Menu
   ```

4. **Press Enter ✈ and the display changes to:**
   
   ```
   Mailbox Menu
   Collator
   ```
   
   To disable a collator password, continue to Step 5 on page 2-23.
   
   To disable a bin password, skip to Step 7 on page 2-23.

5. **Press Enter ✈ and the display changes to:**
   
   ```
   Collator
   Enable Password
   ```

6. **Press Down ▼ until you see:**
   
   ```
   Collator
   Disable Password
   ```
   
   Skip to Step 11.

7. **Press Down ▼ until you see:**
   
   ```
   Mailbox Menu
   Mailbox
   ```
Using the Mailbox/Collator

8 Press Enter ⌘ and the display changes to:
   Mailbox
   Bin 1

9 Press Down ⏯ or Up ⏯ to select the appropriate bin. Then press Enter ⌘.
   The display changes to:
   Bin N
   Enable Password

10 Press Down ⏯ until you see:
    Bin N
    Disable Password

11 Press Enter ⌘ again and the display changes to:
    Enter Password
    >> XXXX

12 Enter the existing password using the numbered keys on the Control Panel.
   The initial passwords for each bin after installing the Mailbox / Collator for the first time are:
   Collator: 0000
   Bin 1: 0001  Bin 6: 0006
   Bin 2: 0002  Bin 7: 0007
   Bin 3: 0003  Bin 8: 0071
   Bin 4: 0004  Bin 9: 0072
   Bin 5: 0005  Bin 10: 0010

13 Press Online ⏯ to bring the printer back online.
   The Mailbox/Collator is now set up for use. The display should read:
   Online
   Ready
Using the Mailbox/Collator

Opening Bins

Follow the appropriate instructions for opening either a password-enabled or password-disabled bin.

Opening Password-Enabled Bins

To open a bin (or the collator) for which a password has been enabled:

1. Push the Bin Unlock button.
   
   You are prompted to enter your password at the Control Panel.

2. Using the numbered Control Panel keys, enter your password.
   
   If you enter an invalid password, the printer returns to its ready state, and you must start the unlocking process again.

   A light appears to indicate each unlocked bin. Open all unlocked bins, then remove the output. You have approximately 30 seconds to open the bin(s). If the Mailbox/Collator re-locks, push the Bin Unlock button again immediately.

Opening Password-Disabled Bins

Push the Bin Unlock button and a light appears to indicate each unlocked bin. Open all full bins, then remove the printouts. You have approximately 30 seconds to open the bin(s). If the Mailbox/Collator re-locks, push the Bin Unlock button again immediately.

Chapter 2: Paper Handling
Using the Offset Catch Tray (OCT)

The Offset Catch Tray (Figure 2.6)—hereafter referred to as OCT—is an optional output device available for the LN17 printer. (See Appendix A for ordering information and Appendix B for installation instructions.)

After installing the OCT, submit your print jobs as usual.

You can set the OCT to operate in three different manners:

- Set the Output Bin option (in both the PCL Emulat and PostScript menus) to OCT No Offset, and the OCT will not offset jobs.
- Set the Output Bin option to OCT On Job, and the OCT will offset jobs from one another.
- Set the Output Bin option to OCT On Job/Copy, and the OCT will offset jobs from one another. It will also offset each set of copies of individual pages of an uncollated multiple copy job.

With the OCT installed, the standard output tray still functions normally. The OCT gives you approximately 500 sheets of letter/A4 20 lb (75 g/m²) maximum collated output. The standard output tray adds another 250 sheets.
The Envelope Feeder (Figure 2.7) is an optional paper handling device available for the LN17 printer. (See Appendix A for ordering information and Appendix B for installation instructions.)

Figure 2.7  Envelope Feeder (front view)

The Envelope Feeder supports all envelope sizes listed in Table 2.1 on page 2-3.
Loading the Envelope Feeder

1. Lift the envelope holder and stack the envelopes in the feeder.
   Refer to Figure 2.4 on page 2-9 for the proper orientation.

2. Lower the envelope holder to hold the envelopes firmly in place.
Once the optional Duplex Module is installed, you can print two-sided (duplex) jobs. (See Appendix A: Ordering Printer Options for ordering information and Appendix C: Installing and Removing Printer Options for installation instructions.)

At least 6 MB of printer memory is recommended (but not required) for duplex printing. See Appendix A for ordering additional memory.

Use only the size paper listed in Table 2.8 for two-sided jobs. Do not use envelopes, postcards, transparencies, or label paper for duplex jobs.

**Table 2.8  Paper sizes that can be used with the Duplex Module**

<table>
<thead>
<tr>
<th>Paper Size</th>
<th>Weight</th>
</tr>
</thead>
<tbody>
<tr>
<td>A4 (210x297 mm)</td>
<td>20 lb (75 g/m²) to 24 lb (90 g/m²)</td>

<td>20 lb (75 g/m²) to 24 lb (90 g/m²)</td>
</tr>
<tr>
<td>Folio (Legal 13 in) (8.5x13 in / 216x330 mm)</td>
<td>20 lb (75 g/m²) to 24 lb (90 g/m²)</td>
</tr>
<tr>
<td>Legal (Legal 14 in) (8.5x14 in / 216x356 mm)</td>
<td>20 lb (75 g/m²) to 24 lb (90 g/m²)</td>
</tr>
</tbody>
</table>

Refer to Figures 2.1 (page 2-5) and 2.4 (page 2-9) for the proper orientation of letterhead when printing duplex.
Duplex (Two-Sided) Printing

Print Orientation and Control Panel Settings

To ensure that duplex jobs print in the proper orientation, set the Duplex option (in the Control Panel’s PCL Emulat and PostScript menus) to the appropriate settings (see Figure 2.8). The LN17 printer driver setting should be as follows (identical for PCL and PostScript):

- Duplex = Short Edge, or
- Duplex = Long Edge

Figure 2.8 Duplex binding orientation and Control Panel menu settings

PCL Emulat Menu: set Duplex to Long Edge Bind
PostScript Menu: set Duplex to Regular

PCL Emulat Menu: set Duplex to Short Edge Bind
PostScript Menu: set Duplex to Tumble

PCL Emulat Menu: set Duplex to Long Edge Bind
PostScript Menu: set Duplex to Tumble

PCL Emulat Menu: set Duplex to Short Edge Bind
PostScript Menu: set Duplex to Regular

Using the Control Panel

Control Panel Features

The LN17 printer Control Panel (Figure 3.1) serves two purposes:

1. It displays information about the status of the printer (or the job in process) and
2. It provides the means for changing printer settings to control how the LN17 printer operates.

The Display

The Control Panel’s display performs two functions.

- It informs you of **printer status conditions**, such as when toner is low, when a paper tray is empty, when a job is in process, and so on.

For example, when you turn on the printer, you see the following message on the display:

```
Online
Ready
```

This message appears whenever the printer is online and ready to accept print jobs.

A 2-line by 16-character display
B Indicator lights
C Control keys (8)
Control Panel Features

- It presents a hierarchy of menu options and settings to configure and control the printer.

For example, when you press Menu after taking the printer offline, you see the following message on the display:

```
Main Menu
Language >
```

Note that the > in this example is one of three indicators you will see in the menu systems. See “Menu Indicators” (page 3-8) for more information on indicators.

See “Navigating the Menu System” (page 3-6) for information on the menu system hierarchy.

The Keys

The Control Panel keypad consists of eight keys, identified with international symbols and labeled in English.

The keys are also numbered 0 - 7. When you install the optional Mailbox / Collator, these same eight keys are used to enter numeric passwords for each of the mailbox bins.

Table 3.1 on page 3-4 describes the function of each key.
## Control Panel Features

Table 3.1  Control Panel keys and their functions

<table>
<thead>
<tr>
<th>Key</th>
<th>Description</th>
</tr>
</thead>
</table>
| **Online** | Toggles between **online** and **offline**. When online, the printer is able to receive and print pages. When offline, page processing and printing halts, but the printer is still able to respond to status requests. You must take the printer **offline** to:  
- Access the menu system with **Menu** or **Reset**.  
- Perform tasks such as forcing a form feed for a partially printed page. The printer goes offline automatically when it has a fault condition such as a paper jam or an open cover. Use **Online** to put the printer back online after correcting such conditions. |
| **Reset**  | Displays the Reset Menu and the first reset function: **Reset Printer**. Press **Up** or **Down** repeatedly to scroll through the other Reset Menu functions. See “Reset Menu” (page 3-26). The printer must be offline for **Reset** to function. |
| **Form Feed** | Prints a partial page of a PCL emulation job, if one exists in the printer. The printer must be offline for **Form Feed** to function. |
| **Menu**   | Displays the Main Menu and its first submenu: **Language**. The printer must be offline for **Menu** to function. From any submenu, press **Menu** to go to the top of the Main Menu. See “Main Menu” (page 3-11) for a full description. |
| **Esc**    | In the menu system, exits the current menu level and returns to the previous one. Press **Esc** at any time in the menu system to go to the previous level. No changes to values will be saved unless you first press **Enter**. Press **Esc** while at Reset Menu (or the top level of Main Menu) to exit either menu. |

### Table 3.1  Control Panel keys and their functions (continued)

<table>
<thead>
<tr>
<th>Key</th>
<th>Description</th>
</tr>
</thead>
</table>
| **Enter** | When in the menu system, accesses, sets, or invokes the displayed submenu, value, or function.  
  - When a submenu is displayed, press **Enter** to access the submenu.  
  - When a printer setting is displayed, such as **Copies**, press **Enter** to set the current value as the default value.  
  - In PCL emulation, press **Enter** to override a paper mismatch.  
  - When a printer action is displayed, such as any of the “Test Menu” (page 3-25) or “Reset Menu” (page 3-26) functions, press **Enter** to invoke the action.  
  When not in the menu system, acts as a Continue key.  
  - After certain error conditions when **Auto Continue** is Off, press **Enter** to continue the printing process. See Appendix D: Control Panel Options, for more information. |
| **Up** | In the menu system, scrolls backward (up) through submenus or through the current list of values or functions.  
  For numeric values such as number of **Copies**, press **Up** to increase the number.  
  Scrolling wraps—if the first item in a list is displayed, press **Up** to display the last item in the list.  
  Press **Up** for more than two seconds to scroll continuously.  
  When the hard disk option has been installed, press **Up** to respond to a disk failure error message. Pressing **Up** will reformat the hard disk. See Chapter 6: Troubleshooting for more information on hard disk failure error messages. |
| **Down** | In the menu system, scrolls forward (down) through the submenus or through the current list of values or actions.  
  For numeric values such as number of **Copies**, press **Down** to decrease the number.  
  Scrolling wraps—if the last item in a list is displayed, press **Down** to display the first item in the list.  
  Press **Down** for more than two seconds to scroll continuously.  
  When the hard disk option has been installed, press **Down** to respond to a disk failure error message. Hard disk usage will be aborted when **Down** is pressed. See Chapter 6: Troubleshooting for more information on hard disk failure error messages. |
Navigating the Menu System

The LN17 printer Control Panel contains two menu structures.

- **Main Menu** and its submenus:
  - **Language**
  - **Mailbox Menu**
    (This menu appears only when the Mailbox / Collator option is installed.)
  - **PCL Emulat Menu**
  - **PostScript Menu**
    (This menu appears only when the PostScript option is installed.)
  - **Interface Menu**
  - **System Menu**
  - **Test Menu**

Press **Online** then **Menu** to access the **Main Menu**. Each of the submenus may have other submenus, settings, or functions. See “Main Menu” (page 3-11) for more information.
Navigating the Menu System

- **Reset Menu** and its functions:
  - **Reset Printer**
  - **Reset Menus**
  - **Reset Ethernet**
    (This function appears only when the optional Ethernet card is installed.)
  - **Reset LocalTalk**
    (This function appears only when the optional LocalTalk card is installed.)
  - **Reset All**
  - **Cancel PS Job**
    (This function appears only when the PostScript option is installed and a PostScript job is sent.)

Press **Online** then **Reset** to access the Reset Menu. See “Reset Menu” (page 3-26).
Navigating the Menu System

Menu Indicators

Three menu indicators (>, = and *) are used to furnish information about menus and settings. The purpose of each indicator is described in Table 3.2 below.

Table 3.2 Indicators found in the Control Panel menu systems

<table>
<thead>
<tr>
<th>Indicator</th>
<th>Purpose</th>
<th>Example</th>
</tr>
</thead>
<tbody>
<tr>
<td>&gt;</td>
<td>Indicates another menu level below this one. The example at the right tells you that there is another level below the Language option in the Main Menu. Press Enter * to move to the next level.</td>
<td>Main Menu Language &gt;</td>
</tr>
<tr>
<td>=</td>
<td>This indicator only appears after options which take a specific setting—it indicates that a value or setting follows the option. The example at the right tells you that Language is an option that takes a specific setting. One setting for the Language option is Français. Another setting is English. (The list of available settings is displayed one at a time on the bottom line of the display as you press Up or Down.)</td>
<td>Language = Français</td>
</tr>
<tr>
<td>*</td>
<td>This indicator identifies the current option setting. The example at the right tells you that Language is currently set to English.</td>
<td>Language = English *</td>
</tr>
</tbody>
</table>
Navigating the Menu System

Setting a Menu Option

To set an option, or to invoke a function, follow the steps below:

1. Press Online → to take the printer offline.
   You will see:
   
   Offline _/_
   Press a key...

2. Press Menu ← to access the Main Menu or press Reset ⬅ to access the Reset Menu.

3. Press Down ▼ or Up ► to scroll through the list of submenus, options, or functions.

4. When you see the submenu, option, or function you want, press Enter ⬜.
   If you selected a submenu or option you did not want, press Esc ☐ return to the previous level. Then make the selection you want and press Enter ⬜ to accept it.

5. If necessary, repeat Step 3 and Step 4 to go through submenu levels to reach all desired options or functions.
   If many possibilities exist, such as 1 through 99 for number of Copies, you can scroll quickly by holding down the key.
   After pressing Enter ⬜ to accept a setting, you will briefly see on the top line of the display:
   
   * saved *
   This indicates the value has been saved as the current setting.
You may either continue to work in the menu system by repeating the steps above, or exit and return to normal operation by pressing Online.

If you press Online before Enter, the value will not be saved.

Other ways to exit a menu option or exit the menu system completely are as follows:

- In the Main Menu, press Menu to return to the top of the Main Menu.
- Press Esc from the Main Menu or Reset Menu to exit the menu system and display the following message:

  Offline
  Press a key...
Main Menu

The Main Menu is a cascading system of submenus, each containing other submenus or options designed to configure the printer for your environment. The Main Menu hierarchy is depicted in Figure 3.2.

In this chapter, a boldfaced menu item means it is a factory setting. A menu item followed by an asterisk (*) means a reset will default to this value.

On the Control Panel, the current setting for each option always appears first and is followed by an asterisk (*). The other possible settings are located by pressing Up or Down to scroll through the list.

See “Reset Menu” (page 3-26) for information on how to revert to factory settings.

![Figure 3.2 Main Menu hierarchy](image)

† Appears only when the option is installed.
Using the Control Panel

Language Menu

The setting for Language Menu determines which language is used to display messages on the Control Panel and to print text on the Configuration Sheet and PCL Font List.

Table 3.3 shows the Language Menu options and their English equivalent. See “Setting a Menu Option” (page 3-9) for the steps to find and change the language setting.

The setting for Language Menu does not revert to the factory setting when you initiate a Reset Menu option.

Note

PostScript Menu

PostScript Menu options establish the default configuration for the printer when printing PostScript jobs. PostScript may be used by software applications to send information and instructions to the printer.

PostScript is available as an option for the LN17 printer. See Appendix A: Ordering Printer Options.

Note

Windows Users:

The Windows PostScript driver for the LN17 printer allows the user to either download the PostScript header with every job or download it only once. If the printer is used in a network or other shared environment where both PCL emulation and PostScript jobs are printed, the header will be deleted when the printer switches from PostScript to PCL emulation.

- Banner sheets printed from Novell networks cause the printer to switch between PostScript and PCL emulation. If banner sheets are printed, ensure that the Language Sensing option is set to ON and the default System Language (for each enabled port) is set to PCL Emulation.

- To avoid the loss of the PostScript header:
  — select Download Each Job in the PostScript driver, or
  — set State Saving to On in the PostScript Menu.
  You must download the header at least once for each power on cycle. If several different PostScript applications are used, the “Download Each Job” option will guarantee that the correct header is always available.
**PostScript Menu**

**Macintosh Users:**
The Macintosh driver is installed by opening the driver disk and double-clicking the OnPAGE installer icon.

---

You may use your software application to override default settings for certain PostScript Menu options. Table 3.5 lists the PostScript Menu options whose settings you may normally override.

**Table 3.5  PostScript Menu settings normally overridden by the setting in the data stream**

Using the Control Panel

**Interface Menu**

The Interface Menu contains submenus for the parallel port on the printer. It also includes submenus for network interface ports when one or more network interface cards are installed.

The Interface Menu may include submenus for the following:

- **Parallel Menu** (see page 3-21)
- **LocalTalk Menu** (see page 3-22)
- **Ethernet Menu** (see page 3-22)

Figure 3.6 starting on page 3-21 shows the Interface Menu hierarchy.

(Menu options are described in Appendix D: Control Panel Options, where they are listed in alphabetical order.)

LocalTalk Menu Options

The LocalTalk Menu, a submenu of the Interface Menu, contains options for configuring the printer's LocalTalk port when the LocalTalk option (DNIC-L'TALK) has been installed.

For detailed information on the DNIC-L'TALK, refer to the DNIC-L'TALK Configuration Guide in the DNIC-L'TALK option kit.

Ethernet Menu Options

The Ethernet Menu, a submenu of the Interface Menu, contains options for configuring the printer's Ethernet port when the Ethernet option (DNIC-E'NET) has been installed.

The Ethernet option supports the following protocols:

- Novell NetWare, Version 2.x, 3.x, and 4.x (BEM)
- TCP/IP
- EtherTalk
- LAT
- Microsoft Windows NT
- SNMP

For more information on the supported protocols, refer to the DNIC-E'NET Configuration Guide in the DNIC-E'NET option kit.
**System Menu**

The System Menu options set general printer features. Figure 3.7 highlights the System Menu hierarchy.

(Menu options are described in Appendix D: Control Panel Options, where they are listed in alphabetical order.)

**Figure 3.7 System Menu hierarchy showing factory settings**

<table>

</tr>
</tbody>
</table>

† Appears only when the option is installed.
‡ Europe is the default setting on the 240 V machines and USA is the default on 120 V machines.
**Test Menu**

Test Menu options are used to generate printer reports. All options other than Memory Check cause the printer to generate a printed report. (Results of the Memory Check are displayed on the Control Panel.)

Figure 3.8 shows the Test Menu hierarchy.

(Menu options are described in Appendix D: Control Panel Options, where they are listed in alphabetical order.)

---

**Figure 3.8 Test Menu hierarchy**

---

1 Appears only when the option is installed.

---

**Caution**

Never generate a printer report or a memory check while the printer is busy. This will cause the printer to reset to its power-on state. As a consequence, you will lose all or part of the job currently being processed and any temporary fonts/macros downloaded to printer memory.
Using the Control Panel

Reset Menu

The Reset Menu is used to reset various printer functions. Selecting Reset Printer resets the printer to its power-on state, while Reset Menus resets the menu settings to their factory settings. Selecting Reset Ethernet or Reset LocalTalk resets the respective network interface card to its power-on state.

Figure 3.9 shows the Reset Menu hierarchy.

(Menu options are described in Appendix D: Control Panel Options, where they are listed in alphabetical order.)

Note

The printer clears downloaded fonts and print macros from RAM, and ejects any partially printed pages when you select Reset Printer, Reset Menus, or Reset All.

LN17 Printer Driving Software

LN17 PCL 5e Emulation Printer Drivers ........................................ 4-2
LN17 PostScript Printer Drivers ..................................................... 4-3
DECprint Supervisor (DCPS) Software ........................................ 4-4
The base LN17 printer supports the PCL printer drivers listed in Table 4.1. To take full advantage of all the printer’s features when printing PCL jobs, install the appropriate LN17 PCL 5e emulation printer driver(s). (Consult your operating system user manual for instructions on installing a new printer driver.)

DECprint Supervisor (DCPS) for OpenVMS is a family of layered products that run on OpenVMS VAX and OpenVMS Alpha systems to provide access to selected PostScript Level 1 and Level 2 print devices.

The DCPS software and documentation are available in the standard OpenVMS CDROM libraries, and may also be ordered separately from Digital.

The license rights to use the basic printing features of DCPS with Digital PostScript printers are included with the OpenVMS operating system.

You can find more information about the DCPS products, including pricing and support of optional features, and ordering information, in the DECprint Supervisor (DCPS) for OpenVMS Software Product Description (AE-PUM0*-TE).

For DCPS installation information, refer to the DECprint Supervisor for OpenVMS Software Installation Guide.

Using the Hard Drive/Downloading Fonts

Hard Drive Considerations ................................................... 5-2
Print/Disk Spooling ............................................................... 5-2
State Saving ......................................................................... 5-2
Formatting the Hard Drive .................................................... 5-3
Downloading Fonts and Macros ........................................... 5-4
Using the Hard Drive/ Downloading Fonts

Hard Drive Considerations

If you install the optional hard drive on the LN17 printer, it will significantly increase the amount of memory available for processing jobs and storing downloaded information (such as fonts and macros).

Print/Disk Spooling

The hard drive can function as a print spooler when you set the Disk Spooling option to On. With disk spooling enabled, the hard drive simultaneously accepts print jobs from all enabled ports, then processes and prints them in the order in which they are first received.

Disk spooling is useful for both standalone and networked systems:

- When the printer is busy processing a long or complex print job, successive print jobs from the same or other ports can be accepted by the printer and spooled to the hard disk. Accordingly, the printer will free the computer that is submitting print jobs so it can subsequently switch to tasks other than printing.

- While most networks provide spooling outside the printer, spooling to a disk inside the printer will remove network related overhead. Accepting print jobs from a disk in the printer is more efficient than accepting print jobs one at a time from networks.

The number of jobs that can be spooled is limited by the amount of hard drive space available. Also, spooling from networks will not be supported for AppleTalk jobs and from ports where DS/P (Document Services for Printing) is enabled. The DECprint Supervisor (DCPS) for OpenVMS software does not support spooling.

State Saving

When the State Saving option is set to On, the printer saves downloaded information when it switches between the PCL and PostScript PDLs (Printer Description Language). Installing a hard drive increases the amount of memory the printer has available for saving downloaded fonts and macros when it switches between PDLs.
Formatting the Hard Drive

When a new unformatted hard disk drive is installed in the printer, it must be formatted before it will be available for use. Formatting can be done when the printer is powered on after the installation.

The disk can be reformatted at any time. This is useful when it is desired to erase everything on the disk—all fonts, macros, and spooled print data. Also, in the unusual case of a problem with the disk, it may be desirable to reformat it, again at the expense of erasing everything on it.

Formatting is accomplished by selecting the Format the Disk option in the Test Menu. You will be warned of losing data and asked two times to confirm the formatting by pressing Up ▲.
Using the Hard Drive/ Downloading Fonts

Digital LN17 printer drivers provide you with the ability to download fonts and PCL 5e macros to the printer.

Fonts can be downloaded to printer memory or to the optional hard drive. Macros can be downloaded to printer memory or the optional hard drive.

- To download fonts, you must first install the appropriate LN17 Windows 3.1/Windows 95, Macintosh, Windows NT, or UNIX drivers. To download macros, you must install the LN17 Windows PCL 5e driver.

The DECprint Supervisor (DCPS) for OpenVMS software includes a sample Digital Command Language (DCL) procedure that you can use to add, list, and remove Postscript fonts from the printer's hard drive.

SYS$COMMON:[SYSHLP:EXAMPLES.DCPS] - FONT_DOWNLOADER.COM is this procedure.

- Fonts and macros downloaded to the hard drive are stored on the hard drive until you delete them. Turning the printer power off does not clear these fonts/macros from the hard drive.

You can only delete a macro from the hard drive if you know the name of the macro. You should therefore keep a record of downloaded macros. (You cannot print out a list of macros.).

- “Temporary” fonts/macros downloaded to printer memory, on a job basis, are cleared from the printer’s memory after each job.

- “Permanent” fonts downloaded to printer memory are cleared from the printer’s memory whenever the printer is powered off, and when the printer switches PDLs and the State Saving option is set to Off.

(When State Saving is set to On, “permanent” fonts/macros are only cleared from printer memory when you turn off the printer.)

Print Quality Problems .............................................. 6-33
Troubleshooting

Consult Table 6.1 starting on page 6-3 for corrective actions when the printer will not print or when the printed output is not what you expect.
### Table 6.1 Printer operation problems

<table>
<thead>
<tr>
<th>Problem</th>
<th>Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>The printer will not print.</td>
<td>1. Power the printer OFF, then ON.</td>
</tr>
<tr>
<td></td>
<td>2. Print a Configuration Sheet.</td>
</tr>
<tr>
<td></td>
<td>• If it prints, the printer is okay.</td>
</tr>
<tr>
<td></td>
<td>• If it does not print, contact your dealer or Digital.</td>
</tr>
<tr>
<td>A file sent from the host does</td>
<td>1. Make sure the printer is online.</td>
</tr>
<tr>
<td>not print.</td>
<td>2. Send a plain text file (i.e., one without printing commands embedded in it) to the printer.</td>
</tr>
<tr>
<td></td>
<td>• If the file prints correctly in the default font, with all of the characters in the original file, the printer is seeing the same data that the host is sending, and the interface or communication line is functioning correctly.</td>
</tr>
<tr>
<td></td>
<td>• If no data prints (or the last page indicator does not come on):</td>
</tr>
<tr>
<td></td>
<td>A. Make certain the printer is configured properly.</td>
</tr>
<tr>
<td></td>
<td>B. The port (parallel or network) may be disabled on the printer. Check the Configuration Sheet for the port you are using to see if the Port Enable option in the appropriate Interface Menu is set to On. If it is set to Off, set it to On and try again.</td>
</tr>
<tr>
<td></td>
<td>C. If using an optional Digital Network Interface Card (DNIC) for Ethernet or LocalTalk, check the Configuration Sheet to see if the printer is acknowledging that the DNIC is present. (Refer to DNIC installation instructions in Appendix C: Installing and Removing Printer Options.)</td>
</tr>
<tr>
<td></td>
<td>• If the Configuration Sheet shows the DNIC as “failed,” or does not show the DNIC as present, power OFF the printer and unplug it. Pull out the controller board, remove the DNIC, and check that the connector pins are not bent. If bent, straighten. Reseat the DNIC securely, put the controller board back in the printer, power ON and print another Configuration Sheet. If the Configuration Sheet still shows the DNIC as “failed,” the DNIC has failed. If the Configuration Sheet still does not show the DNIC as present, then either the DNIC has failed or the interface between the DNIC and the printer controller has failed. Contact your dealer or Digital.</td>
</tr>
<tr>
<td></td>
<td>• If the Configuration Sheet shows the network card as present, check if the printer is recognized by the host. (Refer to the Troubleshooting chapter of the respective DNIC Configuration Guide.)</td>
</tr>
<tr>
<td></td>
<td>D. If there is garbled data, check the Configuration Sheet to confirm that the correct emulation is selected or that the Language Sensing option is set to On.</td>
</tr>
</tbody>
</table>

Table 6.1 Page 1 of 3
Printer Operation Problems

Table 6.1 Printer operation problems (continued)

<table>
<thead>
<tr>
<th>Problem</th>
<th>Action</th>
</tr>
</thead>
</table>
| A printed page does not look like it should. | 1. Make certain that the software application you are using to create your print job is configured properly. Refer to your software documentation.  
2. Send a file containing PCL or PostScript commands to the printer.  
   • If your page prints as it should, your printer and interface are functioning properly.  
   • If your information prints correctly, but doesn’t look right, you may have:  
     • An error in your command sequence/operator  
     • A missing downloaded font  
     • A mismatched printer option against your host formatting  
   • Command errors may be identified by looking at your input file or by using the Hex Dump feature on the printer. You can determine which fonts are in the system by printing a PCL or PS Font List. You can verify your data setup by printing a Configuration Sheet and checking your printer setup. |
| The requested font for the PCL job does not print. | Print a PCL Font List. If fonts print on the Font List, your print job may need correcting. |
| PostScript commands are printed instead of the PostScript job. | 1. Make certain that the software application you are using to create your job is configured properly. Refer to your software documentation.  
2. If the Lang. Sensing option in the appropriate Interface Menu is set to On, the job sent to the printer might have included an incorrect header and therefore not have indicated that a PostScript job was being sent.  
   • Set the System Language option in the appropriate Interface Menu to PostScript and try sending the job again.  
   • Check your software to make sure the PostScript header file is being sent to the printer. |
| A PostScript job does not print in the requested font. | Check the spelling of the requested font in your PostScript file. Many times a typo is the problem. If the font is spelled correctly, print a PS Font List to check if the font is present. If it is not, download the font and resend the job. |
| The bottom edge of the page is cut off, or there are white bands. | For PCL jobs, set the Page Protection option in the PCL Emulat Menu to the size of the paper for the job (or to the next larger size).  
For PostScript jobs, set the Page Protection option in the PostScript Menu to On. |
| A PCL job prints, but the edges are cut off. | Set the Edge to Edge option in the PCL Emulat Menu to On. |

Table 6.1 Page 2 of 3
A PostScript job fails to print.

1. Check that PostScript is installed; also check that you are using an LN17 PostScript printer driver.
2. If the Lang. Sensing option in the appropriate Interface Menu is set to On, set the System Language option to PostScript and re-send the job.
3. Set the Print Errors option in the PostScript Menu to On and resend the job.
   - If an error page prints, there is a problem in the PostScript coding. Correct the coding problem and resend the job.
   - If the job does not print and no error page was printed, set the Page Protection option in the PostScript Menu to Off.
   - If the job still does not print, the job may require additional memory.

Jobs printed from the front tray are skewed with respect to the sheet/envelope.

Check the side guide to be sure that it is snug against the right side of the sheet but not so tight as to buckle it.

<table>

## Troubleshooting

### Control Panel Messages

Listed in Table 6.2 are Control Panel messages that either:

- Cause the printer to stop printing.
- Require the user to call for service.

Also included in Table 6.2 are common, non-error messages you are likely to see. The messages are listed in alphabetical order, preceded by numerical diagnostic error codes.

### Table 6.2 Control Panel messages

<table>
<thead>
<tr>
<th>Message</th>
<th>Description/Corrective Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>0001†</td>
<td>A fault condition has occurred. ACTION: Reseat the controller board and test the printer again. If the problem continues, reseat the ROM SIMM(s) on the controller board and test the printer again. If the problem still continues, observe the diagnostic LED at power on. If the LED does not glow, or glows continuously, contact your dealer or Digital. If the LED flashes, refer to Table 6.3 on page 6-25 for further information.</td>
</tr>
<tr>
<td>0040†</td>
<td>A fault condition has occurred. ACTION: Reseat the controller board and test the printer again. If the problem continues, observe the diagnostic LED at power on. If the LED does not glow, or glows continuously, contact your dealer or Digital. If the LED flashes, refer to Table 6.3 on page 6-25 for further information.</td>
</tr>
<tr>
<td>0100†</td>
<td>A fault condition has occurred. ACTION: If there is a memory SIMM in slot SIM3, remove it. Move the memory SIMM in slot SIM2 into SIM3, then test the printer again. If code 0101 is displayed at power on, replace the SIMM. If code 0101 is not displayed at power on, move the SIMM back to SIM2 and test the printer again. If code 0100 again displays at power on, contact your dealer or Digital.</td>
</tr>
<tr>
<td>0101†</td>
<td>A fault condition has occurred. ACTION: If there is a memory SIMM in slot SIM2, remove it. Move the memory SIMM in slot SIM3 into SIM2, then test the printer again. If code 0100 is displayed at power on, replace the SIMM. If code 0100 is not displayed at power on, move the SIMM back to SIM3 and test the printer again. </tbody>
</table>
## Control Panel Messages (continued)

<table>
<thead>
<tr>
<th>Message</th>
<th>Description/Corrective Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>*****</td>
<td>The printer is in power on diagnostics. ACTION: None, if there is no failure during power on diagnostics. After other diagnostic messages, the final message will be the one that the printer is online and waiting for data.</td>
</tr>
<tr>
<td>Clear Paper Path</td>
<td>A paper jam has occurred. The message alternates with a message that specifies the location of the jam. ACTION: See Table 6.4 on page 6-27.</td>
</tr>
<tr>
<td>Close Bin N</td>
<td>The bin numbered N is pulled out. ACTION: Close the bin.</td>
</tr>
<tr>
<td>Close Bins</td>
<td>Two or more bins are pulled out. ACTION: Close the bins.</td>
</tr>
<tr>
<td>Close Covers</td>
<td>Either the front or rear cover (or both) is open. ACTION: Close the cover, and press Online to resume normal operation.</td>
</tr>
<tr>
<td>Comm. Error</td>
<td>The printer is not able to communicate with the host using bidirectional parallel. ACTION: Check the parallel cable to make sure it is connected properly on both the printer and the host. Inspect the parallel cable for any defects; if wires are broken or the cable appears to be damaged, replace the cable. Check the host to be certain that it is configured properly. Under the Parallel Menu, turn the Bidirectional option to Off if your host's parallel port is not bidirectional. If problem persists, contact your dealer or Digital.</td>
</tr>
<tr>
<td>Comm. Error:nn</td>
<td>A LocalTalk error has occurred. nn is the AppleTalk error number.</td>
</tr>
<tr>
<td>Config. Sheet Printing...</td>
<td>The Configuration Sheet is printing. See the Config. sheet option, page D-4. ACTION: Remove the Configuration Sheet from the output tray when it has finished printing.</td>
</tr>
<tr>
<td>Confirm: OK To Lose All Data</td>
<td>Second level warning message prior to formatting the hard disk. ACTION: Press Up to format the disk or press Down to abort.</td>
</tr>
<tr>
<td>Demo Page Printing...</td>
<td>The Demo Page is printing. ACTION: Remove the Demo Page from the output tray when it finishes printing.</td>
</tr>
</tbody>
</table>
### Control Panel Messages

Paper Jams

Your printer has been designed to provide reliable, trouble-free operation. Nonetheless, you may experience an occasional paper jam.

When the printer detects a misfeed or a paper jam, the printing process is halted, and a Control Panel message is displayed.

After the paper jam has been cleared, the printer will resume operation to complete the print job. Set the Jam Recovery option to On to guarantee that pages in the print engine when the jam occurs will be reprinted.

What Causes a Paper Jam?

Paper jams occur most often when:

- The paper stock is in poor condition.
- The paper stock has been improperly loaded into the paper trays.
- The printer needs cleaning.
- Printer parts are worn and need to be replaced.

Clearing Paper Jams

Table 6.4 on page 6-27 lists the types of paper jams that may occur. If you see a Control Panel message that indicates a paper jam, find the message in the left-hand column and perform the accompanying steps to clear the paper jam.

Be careful not to touch any of the components inside the printer when removing jammed paper. They may be very hot.

### Ordering Printer Options

For high quality and reliability, use genuine Digital supplies and accessories. Contact your local authorized Digital reseller or Digital sales office for more information or to order any of the printer options and accessories listed in Table A.1. In North America, call 1-800-DIGITAL (1-800-344-482).

Replacing Consumables

Replacing the EP Cartridge ............................................ B-2
Replacing the Fuser Cartridge/BTR ............................... B-5
Replacing Consumables

Replacing the EP Cartridge

Caution

- Do not expose the EP (electronic printing) cartridge to direct sunlight or artificial light for more than 15 minutes. Overexposure will permanently damage the photosensitive imaging drum.
- Do not open the drum shutter or touch the green imaging drum.
- Complete the EP cartridge installation within 15 minutes of removing the cartridge from its package.

1. Open the front cover by pressing the button on top of the cover.
2. Remove the old EP cartridge by lifting it towards the rear of the printer then pulling it up and out.
Replacing the EP Cartridge

3 Remove the new EP cartridge from its wrapper.

4 Shake the EP cartridge several times to evenly distribute the toner.

5 Remove the tape strip.
Replacing the EP Cartridge

6 Insert the EP cartridge into the guide channels marked by the arrows inside the front cover. Push in until it clicks in place, then close the front cover.
Replacing the Fuser Cartridge/BTR

**Caution**
- The fuser area is extremely hot. Turn the printer OFF and allow it to cool for 40 minutes before replacing an existing fuser cartridge.
- Replacing the BTR (Bias Transfer Roll) requires removing the EP cartridge. Do not expose the EP cartridge to direct sunlight or artificial light for more than 15 minutes. Overexposure will permanently damage the photosensitive imaging drum.

1. **Power OFF** the printer and disconnect the power cord and any interface cables.

2. **Open the rear cover.**

3. **Let the fuser area cool for 40 minutes.**
   If the Duplex Module is installed, continue with Step 4 on page B-6. Otherwise, skip to Step 5 on page B-6.
Replacing the Fuser Cartridge/BTR

4 Remove the Duplex Module by pushing the green lock buttons on either side of it.

5 Remove the mounting screws from the printer as shown above, and set them aside.

6 Pull out the old fuser cartridge by the tabs on either side of the cartridge.

7 Slide the new fuser cartridge into the printer.
Replacing the Fuser Cartridge/BTR

8 Secure the fuser cartridge by replacing the mounting screws that were removed in Step 5 on page B-6.

If you do not need to re-install the Duplex Module, close the rear cover and skip to Step 11.

9 Insert the Duplex Module through the guide channels.

10 Make sure the green side-locks at both ends click into position. Then close the rear cover.

11 Open the front cover and remove the EP cartridge by lifting it towards the rear of the printer then pulling it up and out.
12 Use the BTR removal tool to release the left side of the BTR.

13 Use the BTR removal tool to release the right side of the BTR.

14 Lift the BTR out of the printer.

15 Insert the new BTR, making sure it is seated properly.
16 Pull the tab to remove the BTR's protective covering.

17 Re-insert the EP cartridge into the guide channels marked by the arrows inside the top cover. Push in until it clicks in place, then close the front cover.

18 Plug in the power cord. Press and hold Online and Menu while powering ON the printer. This will reset the Fuser Life counter and release the warning message.

After warming up for a few minutes, the Control Panel displays the following message:

Online
Ready

If the Replace Fuser Cartridge message still appears, Step 18.

If any other message is displayed, see Table 6.2 starting on page 6-6.

    Removing the DNIC .............................................. C-53
The LN17 printer options are easy to install. Installing and testing any one option is likely to take 5 to 15 minutes. Before installing or removing any printer option, take the precautionary steps outlined below.

**POWER OFF THE PRINTER:** The printer determines which options are installed through a self-test. The self-test is run when you power ON the printer. Therefore, for proper operation, you must power OFF the printer before installing/removing an option, then power it back ON after installing/removing an option.

**DISCONNECT THE POWER CORD:** Never remove the printer controller board while the printer is plugged in. To avoid the possibility of electrical shock, always disconnect the power cord when installing or removing ANY internal or external printer option.

**DISCHARGE STATIC ELECTRICITY:** The controller board and internal printer options (SIMMs, network interface cards, and the hard drive) are sensitive to static electricity. Before installing or removing an internal option, discharge static electricity from your body by touching something metal, such as the metal back plate on any device plugged into a grounded power source. If you walk around before finishing the installation, again discharge any static electricity.

**Caution**
Installing and Removing Printer Options

Memory SIMMs

This section contains two sets of instructions:

• “Installing a Memory SIMM” (page C-5)
• “Removing a Memory SIMM” (page C-8)

Note

Memory SIMMs for the LN17 printer are available in the following sizes:

• one-sided 4 MB and 16 MB
• two-sided 32 MB

(See Appendix A: Ordering Printer Options for ordering additional memory.)
Installing a Memory SIMM

SIMMs and controller boards are sensitive to static electricity. Before installing a SIMM, discharge static electricity from your body by touching something metal, such as the metal back plate on any device plugged into a grounded power source. If you walk around before finishing the installation, again discharge any static electricity.

Never remove the printer controller board while the printer is plugged in.

1 MB of the printer's resident memory is unusable for each 32 MB SIMM that is installed. Therefore, when you install one 32 MB SIMM the total system memory is 33MB, not 34 MB. When two 32 MB SIMMs are installed, the total system memory is 64 M B, not 66 M B.

1. Power OFF the printer and disconnect the power cord and any interface cables.

2. Loosen the thumb screws and pull out the controller board.

3. Place the controller board on a ream of paper.
Memory SIMMs

4 Select an appropriate SIMM slot to use.
   Slots SIM2 (A) and SIM3 (B) are interchangeable and are used for installing additional printer memory.

5 Insert the new SIMM at an angle into the appropriate SIMM slot and rotate it up into position.

6 Make sure that the clips on either side snap closed to lock the SIMM in place.

7 Replace the controller board, sliding it along the alignment channels. Then hand-tighten the thumb screws.
8 Replace the power and interface cables and power ON the printer.
After warming up for a few minutes, the Control Panel displays the following message:

Online
Ready

If any other message is displayed, see Table 6.2 starting on page 6-6.

9 Print a Configuration Sheet to verify that the SIMM has been installed properly.
   A Press Online  to take the printer offline.
   B Press Menu , then Down  or Up  until you see:
      Main Menu
      Test Menu
   C Press Enter  and the message display changes to:
      Test Menu
      Config. sheet
   D Press Enter  again to print a Configuration Sheet.
   E After the Configuration Sheet prints, press Online  to put the printer back online.

On the Configuration Sheet, the “Total system memory” value should match the amount
of memory just installed plus the RAM resident on the printer.
Removing a Memory SIMM

SIMMs and controller boards are sensitive to static electricity. Before removing a SIMM, discharge static electricity from your body by touching something metal, such as the metal back plate on any device plugged into a grounded power source. If you walk around before finishing the removal, again discharge any static electricity.

Never remove the printer controller board while the printer is plugged in.

1  Power OFF the printer and disconnect the power cord and any interface cables.

2  Loosen the thumb screws and pull out the controller board.

3  Place the controller board on a ream of paper.
4 Carefully push out on the locking clips to release the SIMM.

5 Rotate the SIMM down out of position, then lift it out.

6 Replace the controller board, sliding it along the alignment channels. Then hand-tighten the thumb screws.

7 Replace the power and interface cables and power ON the printer.

After warming up for a few minutes, the Control Panel displays the following message:

   Online
   Ready

If any other message is displayed, see Table 6.2 starting on page 6-6.
Installing and Removing Printer Options

PostScript SIMM

This section contains two sets of instructions:

- “Installing the PostScript SIMM” (below)
- “Removing the PostScript SIMM” (page C-13)

Installing the PostScript SIMM

SIMMs and controller boards are sensitive to static electricity. Before installing a SIMM, discharge static electricity from your body by touching something metal, such as the metal back plate on any device plugged into a grounded power source. If you walk around before finishing the installation, again discharge any static electricity.

Never remove the printer controller board while the printer is plugged in.

1 Power OFF the printer and disconnect the power cord and any interface cables.

2 Loosen the thumb screws and pull out the controller board.

3 Place the controller board on a ream of paper.
Select an appropriate SIMM slot to use. Slots SIM 0 (A) and SIM 1 (B) are interchangeable and are used for installing the PostScript SIMM.

Insert the PostScript SIMM vertically into the appropriate SIMM slot and rotate it down into position.

Make sure that the clips on either side snap closed to lock the PostScript SIMM in place.

Replace the controller board, sliding it along the alignment channels. Then hand-tighten the thumb screws.
Replace the power and interface cables and power ON the printer.

After warming up for a few minutes, the Control Panel displays the following message:

- Online
- Ready

If any other message is displayed, see Table 6.2 starting on page 6-6.

Print a Configuration Sheet to verify that the SIMM has been installed properly.

A. Press Online to take the printer offline.

B. Press Menu, then Down or Up until you see:

- Main Menu
- Test Menu

C. Press Enter and the message display changes to:

- Test Menu
- Config. sheet

D. Press Enter again to print a Configuration Sheet.

E. After the Configuration Sheet prints, press Online to put the printer back online.

The Configuration Sheet should show the PostScript Menu and PostScript version.

Install a Digital LN17 PostScript print driver now.

Table 2 in the Setting Up Guide lists the LN17 PostScript printer drivers packaged with your printer. See the Setting Up Guide for installing driving software.
Removing the PostScript SIMM

SIMMs and controller boards are sensitive to static electricity. Before removing a SIMM, discharge static electricity from your body by touching something metal, such as the metal back plate on any device plugged into a grounded power source. If you walk around before finishing the removal, again discharge any static electricity.

Never remove the printer controller board while the printer is plugged in.

1. Power OFF the printer and disconnect the power cord and any interface cables.

2. Loosen the thumb screws and pull out the controller board.

3. Place the controller board on a ream of paper.
Carefully pull out on the locking clips to release the PostScript SIMM.

Rotate the PostScript SIMM up to a vertical position, then lift it out.

Replace the controller board, sliding it along the alignment channels. Then hand-tighten the thumb screws.

Replace the power and interface cables and power ON the printer.

After warming up for a few minutes, the Control Panel displays the following message:

- Online
- Ready

If any other message is displayed, see Table 6.2 starting on page 6-6.

Press Online ➡️, then Reset ➔ and you see:

- Reset Menu
- Reset Printer

Press Down ▼ and you see:

- Reset Menu
- Reset Menus
10 Press Enter \^ and the message display changes to:

Reset Menus
Please Wait...

This message displays while the printer resets to factory defaults.

When the reset is finished, the display changes to:

Online
Ready

If any other message is displayed, see Table 6.2 starting on page 6-6.
Hard Drive

This section contains two sets of instructions:
- “Installing the Hard Drive” (below)
- “Removing the Hard Drive” (page C-19)

Caution

The hard drive and controller board are sensitive to static electricity. Before installing the hard drive, discharge static electricity from your body by touching something metal, such as the metal back plate on any device plugged into a grounded power source. If you walk around before finishing the installation, again discharge any static electricity.

Never remove the printer controller board while the printer is plugged in.

Installing the Hard Drive

1. Power OFF the printer and disconnect the power cord and any interface cables.

2. Loosen the thumb screws and pull out the controller board.

3. Place the controller board on a ream of paper.
Align the hard drive connector to the controller connector (J180), and gently lay the hard drive on top of the four standoffs.

Push down on the drive until all four corners latch into place.

Replace the controller board, sliding it along the alignment channels. Then hand-tighten the thumb screws.

Replace the power and interface cables and power ON the printer.

If the drive is already formatted, the Control Panel will display:

Online
Ready

If the drive is unformatted, the Control Panel will display:

Press ↑ to Init
Press ↓ to Abort

If any other message is displayed, see Table 6.2 starting on page 6-6.

If you need to format the drive, continue to Step 8 on page C-18. Otherwise, skip to Step 9 on page C-18.
8 Press Up ▲ to format the hard drive.
After the formatting is complete, the Control Panel displays:

   Online
   Ready

If any other message is displayed, see Table 6.2 starting on page 6-6.

9 Print a Configuration Sheet to verify that the hard drive has been installed properly.
A Press Online ➞ to take the printer offline.
B Press Menu ➞, then Down ▼ or Up ▲ until you see:
   Main Menu
   Test Menu
C Press Enter ➞ and the message display changes to:
   Test Menu
   Config. sheet
D Press Enter ➞ again to print a Configuration Sheet.
E After the Configuration Sheet prints, press Online ➞ to put the printer back online.

10 Find the “Disk” line on the Configuration Sheet.
    If the hard drive has been properly installed, it is listed there (A). “Disk Spooling” also appears under the System menu. (Remove and reinstall the hard drive if you do not see both of these options listed.)

11 Refer to Chapter 5: Using the Hard Drive/Downloading Fonts for instructions on using the hard drive.

---

**Note**
Keep the original packaging material in case you ever need to remove the option.
Removing the Hard Drive

1 Power OFF the printer and disconnect the power cord and any interface cables.

2 Loosen the thumb screws and pull out the controller board.

3 Place the controller board on a ream of paper.

4 Gently unlatch the hard drive from the standoffs and release the hard drive connector from the controller board connector.

5 Gently release the opposite end of the hard drive from the standoffs, then lift the hard drive from the controller board. If possible, store the hard drive in its original anti-static bag.
Replace the controller board, sliding it along the alignment channels. Then hand-tighten the thumb screws.

Replace the power and interface cables and power ON the printer.

After warming up for a few minutes, the Control Panel displays the following message:

- Online
- Ready

If any other message is displayed, see Table 6.2 starting on page 6-6.
Installing and Removing Printer Options

**Duplex Module**

This section contains two sets of instructions:

- “Installing the Duplex Module” (below)
- “Removing the Duplex Module” (page C-23)

**Note**

At least 6 MB of printer memory is recommended (but not required) for printing two-sided (duplex) jobs. See Appendix A: Ordering Printer Options for ordering additional memory.

**Installing the Duplex Module**

1. Power OFF the printer and disconnect the power cord and any interface cables.

2. Open the rear cover.

3. Insert the Duplex Module through the guide channels.
4. Make sure the green side-locks at both ends click into position.

5. Close the rear cover, plug in the power cord, and power ON the printer.

After warming up for a few minutes, the Control Panel displays the following message:

- **Online**
- **Ready**

If any other message is displayed, see Table 6.2 starting on page 6-6.

During two-sided printing, the paper partially enters the standard tray, then feeds back into the printer.

---

**Note**

Keep the original packaging material in case you ever need to remove the option.
Removing the Duplex Module

1 Power OFF the printer and disconnect the power cord and any interface cables.

2 Open the rear cover.

3 Remove the Duplex Module by pushing the green lock buttons on either side of it.
   
   Be careful not to touch the metal part of the motor at the right end of the duplex module—it is hot after continuous two-sided printing.

   Store the Duplex Module in its original packaging.

4 Close the rear cover, plug in the power cord, and power ON the printer.

   After warming up for a few minutes, the Control Panel displays the following message:
   
   Online
   Ready

   If any other message is displayed, see Table 6.2 starting on page 6-6.
Installing and Removing Printer Options

500-sheet Paper Deck and Cassette

This section contains three sets of instructions:

- “Installing One 500-sheet Paper Deck and Cassette” (below)
- “Installing Two 500-sheet Paper Decks and Cassettes” (page C-27)
- “Removing a 500-sheet Paper Deck and Cassette” (page C-31)

Installing One 500-sheet Paper Deck and Cassette

1 Power OFF the printer and disconnect the power cord and any interface cables.

2 Holding the printer by the recessed side hand holds, set it atop the Paper Deck, aligning the corners.

3 Cover the right side hand hold with the joint tab, inserting (A) then (B).
4. Cover the left side hand hold with the joint tab, inserting (A) then (B).

5. Remove the small cover at the back of the Paper Deck. Fit the connector firmly into the printer receptacle. Replace the small cover.

6. Replace the power and interface cords, and power ON the printer.
   After warming up for a few minutes, the Control Panel displays the following message:
   
   Online
   Ready
   
   If any other message is displayed, see Table 6.2 starting on page 6-6.

7. Press Online , then Reset and you see:
   
   Reset Menu
   Reset Printer

8. Press Down and you see:
   
   Reset Menu
   Reset Menus
500-sheet Paper Deck and Cassette

9 Press Enter and the message display changes to:

   Reset Menus
   Please Wait...

This message displays while the printer resets the Source Mapping (PCL Menu) settings to include the lower tray just installed.

When the reset is finished, the display changes to:

   Online
   Ready

If any other message is displayed, see Table 6.2 starting on page 6-6.

To enable automatic tray switching with PostScript jobs, turn Tray Switching in the PostScript menu to a value that includes the newly installed tray.

10 Consult the section “Using the Main Tray or Lower Tray” (page 2-5) for instructions on loading paper in the lower tray.

11 Consult the section “Automatic Tray Switching” (page 2-13) for instructions on engaging tray switching between the lower tray and other printer trays.

---

Keep the original packaging material in case you ever need to remove the option.

---

Note
Installing Two 500-sheet Paper Decks and Cassettes

1 Power OFF the printer and disconnect the power cord and any interface cables.

2 Holding the top Paper Deck by the recessed side hand holds, set it atop the bottom Paper Deck, aligning the corners.

3 Cover the left side hand hold with the joint tab, inserting (A) then (B).
4 Cover the right side hand hold with the joint tab, inserting (A) then (B).

5 Remove the small cover at the back of the bottom Paper Deck. Fit the connector firmly into the top Paper Deck receptacle. Replace the small cover.

6 Holding the printer by the recessed side hand holds, set it atop the top Paper Deck, aligning the corners.

7 Cover the right side hand hold with the joint tab, inserting (A) then (B).
8 Cover the left side hand hold with the joint tab.

9 Remove the small cover at the back of the top Paper Deck. Fit the connector firmly into the printer receptacle. Replace the small cover.

10 Replace the power and interface cords, and power ON the printer.
After warming up for a few minutes, the Control Panel displays the following message:

   Online
   Ready

If any other message is displayed, see Table 6.2 starting on page 6-6.

11 Press Online, then Reset and you see:

   Reset Menu
   Reset Printer

12 Press Down and you see:

   Reset Menu
   Reset Menus
500-sheet Paper Deck and Cassette

13 Press Enter and the message display changes to:
   Reset Menus
   Please Wait...
This message displays while the printer resets the Source Mapping (PCL Menu) settings to include the lower trays just installed.
When the reset is finished, the display changes to:
   Online
   Ready
If any other message is displayed, see Table 6.2 starting on page 6-6.
   To enable automatic tray switching with PostScript jobs, turn Tray Switching in the PostScript menu to a value that includes the newly installed trays.

14 Consult the section “Using the Main Tray or Lower Tray” (page 2-5) for instructions on loading paper in the 500-sheet Paper Deck and Cassette (lower tray).

15 Consult the section “Automatic Tray Switching” (page 2-13) for instructions on engaging tray switching between the lower tray and other printer trays.

---

Keep the original packaging material in case you ever need to remove the option.

Note
Removing a 500-sheet Paper Deck and Cassette

1. Power OFF the printer and disconnect the power cord and any interface cables.

2. Remove the small cover at the back of the Paper Deck, then unplug the connector from the printer. Replace the small cover.

3. Remove the left joint tab joining the printer to the Paper Deck, removing (A) then (B).

4. Remove the right joint tab joining the printer to the Paper Deck, removing (A) then (B).

5. Holding the printer by the recessed side hand holds, lift it up off the Paper Deck.
500-sheet Paper Deck and Cassette

6 If two Paper Decks are installed, detach the Paper Decks from each other. Otherwise, continue to Step 7.
   A Remove the joint tabs joining the two Paper Decks.
   B Disconnect the plug of the bottom Paper Deck from the receptacle of the upper Paper Deck.
   Be sure to keep the joint tabs. You will need them to reinstall the Paper Deck(s).

7 Replace the power and interface cords, and power ON the printer.
After warming up for a few minutes, the Control Panel displays the following message:
   Online
   Ready
If any other message is displayed, see Table 6.2 starting on page 6-6.

8 Press Online \(\downarrow\), then Reset \(\leftarrow\) and you see:
   Reset Menu
   Reset Printer

9 Press Down \(\uparrow\) and you see:
   Reset Menu
   Reset Menus

10 Press Enter \(\rightarrow\) and the message display changes to:
   Reset Menus
   Please Wait...
This message displays while the printer resets the Source Mapping (PCL Menu) and Tray Switching (PostScript Menu) settings to factory defaults.
When the reset is finished, the display changes to:
   Reset Menu
   Reset Menus

11 Press Esc \(\leftarrow\), then Online \(\uparrow\) to bring the printer back online.
You will see:
   Online
   Ready
If any other message is displayed, see Table 6.2 starting on page 6-6.
Offset Catch Tray (OCT)

This section contains two sets of instructions:

- “Installing the OCT” (below)
- “Removing the OCT” (page C-36)

Installing the OCT

1. Power OFF the printer and disconnect the power cord and any interface cables.

2. Open the rear cover.

3. Remove the option interface cover by pushing up on it from the underside.

   Keep the option interface cover in a safe place. You will need to replace it if you ever remove the option.
4 Close the rear cover.

5 Grasping the OCT by the sides, insert its positioning hook into the outer-most slit in the exhaust grill on top of the printer.

To avoid damage to the positioning hook, do not twist the OCT to the right or left while lowering it into position.

6 Gently guide the OCT down to the printer, aligning the OCT connector plug with the receptacle on the printer.

Make sure the OCT is firmly seated.

7 Flip open the output tray on the OCT.
Offset Catch Tray (OCT)

8 **Reconnect the power cord and interface cable(s) and power ON the printer.**
After warming up for a few minutes, the Control Panel displays the following message:

- Online
- Ready

If any other message is displayed, see Table 6.2 starting on page 6-6.

9 **Consult** “Using the Offset Catch Tray (OCT)” *(page 2-26)* for usage instruction.

---

Note

Keep the original packaging material in case you ever need to remove the option.
Offset Catch Tray (OCT)

Removing the OCT

1. Power OFF the printer and disconnect the power cord and any interface cables.

2. Press the release buttons with your thumbs and push up on the OCT to remove it.

   To avoid damage to the positioning hook, do not twist the OCT to the right or left when pushing up to remove it.

   Store the OCT in its original packaging materials, or in a dry, dust-free place.

3. Replace the option interface cover which was removed and stored when the option was first installed.

4. Power ON the printer.

   After warming up for a few minutes, the Control Panel displays the following message:

   Online
   Ready

   If any other message is displayed, see Table 6.2 starting on page 6-6.

5. Press Online  , then Reset  and you see:

   Reset Menu
   Reset Printer
6 Press Down ▼ and you see:
   Reset Menu
   Reset Menus

7 Press Enter • and the message display changes to:
   Reset Menus
   Please Wait...

   This message displays while the printer changes the default Output Bin setting to Standard.
   When the reset is finished, the display changes to:
   Online
   Ready

   If any other message is displayed, see Table 6.2 starting on page 6-6.
Installing and Removing Printer Options

Mailbox/Collator

This section contains two sets of instructions:
- “Installing the Mailbox/Collator” (below)
- “Removing the Mailbox/Collator” (page C-41)

Installing the Mailbox/Collator

1 Power OFF the printer and disconnect the power cord and any interface cables.

2 Open the rear cover.

3 Remove the option interface cover by pushing up on it from the underside. Then close the rear cover.

Keep the option interface cover in a safe place. You will need to replace it if you ever remove the option.
4 Unpack the Mailbox/Collator and grasp it by the front and rear hand holds. Do not allow the rear door of the Mailbox/Collator to open. If you must set the Mailbox/Collator down, lay it on its right side.

5 Insert the Mailbox/Collator positioning hook into the outer-most slit in the exhaust grill on top of the printer. To avoid damage to the positioning hook, do not twist the Mailbox/Collator to the right or left while lowering it into position.

6 Gently guide the Mailbox/Collator down to the printer, aligning the Mailbox/Collator connector plug with the receptacle in the printer. Make sure the Mailbox/Collator is firmly seated.
Attach the power cords.

A Plug one end of the short (60 cm/2 foot) Mailbox/Collator cord (A) into the AC receptacle on the printer, and the other end into the lower AC receptacle on the Mailbox/Collator.

B Plug one end of the printer power cord (B) into the upper AC power receptacle on the Mailbox/Collator, and the other end into the wall.

Power ON the Mailbox/Collator (A) first, and then power ON the printer.

After warming up for a few minutes, the Control Panel displays the following message:

Online
Ready

If any other message is displayed, see Table 6.2 starting on page 6-6.

Consult “Using the Mailbox/Collator” (page 2-19) for usage instruction.

---

Keep the original packaging material should you ever need to remove the option.
Removing the Mailbox/Collator

1. Power OFF the printer and disconnect both power cords and any interface cables.

2. Press the release buttons with your thumbs and push up on the Mailbox/Collator to remove it.

   To avoid damage to the positioning hook, do not twist the Mailbox/Collator to the right or left when pushing up to remove it.

3. Carefully lift the Mailbox/Collator off the printer, rotating it away from the rear of the printer.

   The Mailbox/Collator is top-heavy. Carefully control its movement as you rotate it.

   Store the Mailbox/Collator in its original packaging materials, or in a dry, dust-free place.
4 Replace the option interface cover which was removed and stored when the option was first installed.

5 Power ON the printer.
   After warming up for a few minutes, the Control Panel displays the following message:
   
   Online
   Ready

   If any other message is displayed, see Table 6.2 starting on page 6-6.

6 Press Online \( \downarrow \) and Reset \( \uparrow \) and you see:
   
   Reset Menu
   Reset Printer

7 Press Down \( \downarrow \) and you see:
   
   Reset Menu
   Reset Menus

8 Press Enter \( \rightarrow \) and the message display changes to:
   
   Reset Menus
   Please Wait...

   This message displays while the printer changes the default Output Bin setting to Standard.

   When the reset is finished, the display changes to:
   
   Online
   Ready

   If any other message is displayed, see Table 6.2 starting on page 6-6.
Installing the Envelope Feeder

1. Power OFF the printer and disconnect both power cords and any interface cables.

2. Open the Front Tray.

3. Open the hinged clasp at the left side of the tray.
4 Remove the face plate and store it.
   The face plate is re-installed after removing the feeder.

5 Angle the Envelope Feeder into the printer.

6 Allow the Envelope Feeder to rest down at its seated position.

7 Reconnect the power cord and interface cable(s) and power ON the printer.
   After warming up for a few minutes, the Control Panel displays the following message:
   Online
   Ready
   If any other message is displayed, see Table 6.2 starting on page 6-6.
8 Press Online ➔, then Reset ➔ and you see:
   Reset Menu
   Reset Printer

9 Press Down ▼ and you see:
   Reset Menu
   Reset Menus

10 Press Enter ● and the message display changes to:
   Reset Menus
   Please Wait...

   This message displays while the printer resets the Source Mapping (PCL Menu) settings to
   factory defaults, including the Envelope Feeder.

   When the reset is finished, the display changes to:
   Online
   Ready

   If any other message is displayed, see Table 6.2 starting on page 6-6.

11 Consult “Using the Envelope Feeder” (page 2-27) in Chapter 2: Paper Handling for usage
   instruction.

---

Note

Keep the original packaging material in case you ever need to remove the option.
Removing the Envelope Feeder

1. Power OFF the printer and disconnect both power cords and any interface cables.

2. Lift the Envelope Feeder up and out from the printer.

   Store the Envelope Feeder in its original packaging materials, or in a dry, dust-free place.

3. Re-attach the face plate that was removed when the Envelope Feeder was installed.

4. Close the hinged clasp at the left side of the Front Tray.
   Close the Front Tray if not needed.

5. Reconnect the power cord and interface cable(s) and power ON the printer.
   After warming up for a few minutes, the Control Panel displays the following message:
   Online
   Ready
   If any other message is displayed, see Table 6.2 starting on page 6-6.
6 Press Online ▼, then Reset ▼ and you see:
   Reset Menu
   Reset Printer

7 Press Down ▼ and you see:
   Reset Menu
   Reset Menus

8 Press Enter ▼ and the message display changes to:
   Reset Menus
   Please Wait...

This message displays while the printer resets the Source Mapping (PCL Menu) settings to
factory defaults.

When the reset is finished, the display changes to:
   Online
   Ready

If any other message is displayed, see Table 6.2 starting on page 6-6.
Installing and Removing Printer Options

Digital Network Interface Card (DNIC)

This section contains two sets of instructions:
• “Installing the DNIC” (page C-49)
• “Removing the DNIC” (page C-53)

These instructions apply to Ethernet (DNIC-E’NET) and LocalTalk (DNIC-L’TALK).

Caution

The DNIC and controller board are sensitive to static electricity. Before installing the DNIC, discharge static electricity from your body by touching something metal, such as the metal back plate on any device plugged into a grounded power source. If you walk around before finishing the installation, again discharge any static electricity.

Never remove the printer controller board while the printer is plugged in.

Note

The printer is capable of supporting two DNICs; however, do not install two of the same DNICs in the printer.
Installing the DNIC

Be sure to read Chapter 2 of the DNIC-E’NET Configuration Guide for important network connection instructions.

Note

1 Power OFF the printer and disconnect the power cord and any interface cables.
   • If installing the DNIC-E’NET, continue with Step 2.
   • If installing the DNIC-L’TALK, skip to Step 3.

2 Note the DNIC-E’NET serial number (A) and Ethernet address (B).

   This information will not be accessible after the card is installed.
   Pins 2 and 3 on J X1 (C) must be strapped together for proper operation of the DNIC-E’NET.

3 Loosen the thumb screws and pull out the controller board.
4. Place the controller board on a ream of paper and remove the screws and faceplate from the slot where you will install the DNIC.
   - Save the faceplate should you ever need to remove the DNIC.

5. Line up the DNIC connector to the slot in the controller board.

6. Gently press the card down until it fits snugly in place.
7 Secure the DNIC mounting bracket to the controller board with the screws removed in Step 4.

8 Replace the controller board, sliding it along the alignment channels. Then hand-tighten the thumb screws.
Replace the power and interface cables and power ON the printer.

After warming up for a few minutes, the Control Panel displays the following message:

- Online
- Ready

If any other message is displayed, see Table 6.2 starting on page 6-6.

Print a Configuration Sheet to verify that the DNIC has been installed properly. Applicable data should appear on the Configuration Sheet (A).

A Press Online on the control panel to take the printer offline.

B Press Menu, then Down or Up until you see:

- Main Menu
- Test Menu

C Press Enter and the message display changes to:

- Test Menu
- Config. sheet

D Press Enter again to print a Configuration Sheet.

E After the Configuration Sheet prints, press Online to put the printer back online.

Keep the original packaging material in case you ever need to remove the option.

Note
Removing the DNIC

1 Power OFF the printer and disconnect the power cord and any interface cables.

2 Loosen the thumb screws and pull out the controller board.

3 Place the controller board on a ream of paper.

4 Unscrew the DNIC mounting bracket from the controller board.

5 Gently lift up on the card until it detaches from the controller board.
Lift the card out and away from the slot in the controller board. Then replace the screws and faceplate that came with the printer.

Store the DNIC in its original packaging materials, or in a dry, dust-free place.

Replace the controller board, sliding it along the alignment channels. Then hand-tighten the thumb screws.

Replace the power and interface cables and power ON the printer.

After warming up for a few minutes, the Control Panel displays the following message:

Online
Ready

If any other message is displayed, see Table 6.2 starting on page 6-6.
Table D.1, starting on page D-3, contains an alphabetical listing of all Control Panel options. For each option listed, you will find:

- The menu(s) under which the option is located
- The factory and default settings for the option. A boldfaced menu item means it is a factory setting. A menu item followed by an asterisk means a reset will default to this value. Example: For the option “Auto Job End” the selection On* is the factory setting (bold) and the reset default value (*).
- All possible settings for the option
- A description of the option

You can normally use your own applications to override many of the printer's default settings. For example, most applications allow you to choose how many copies of the print job you want. The number of copies you specify through your application will override the printer’s default setting for the “Copies” option.

Figure D.1 below lists all Control Panel options whose settings you can normally override. (Only in the absence of information from the print job will the printer use the default settings for these options.)

Figure D.1 Control Panel settings (options) normally overridden by the print job

</thead>
</table>
| **Reset All**                       | Initiates the Reset Printer, Reset Menus, Reset Ethernet, and Reset LocalTalk functions.  
**Reset Menu**                      | To ensure proper operation of this feature, cycle the printer (turn the printer off/on) before invoking Reset All. |
| **Reset Ethernet**†                 | Resets the Ethernet network interface card to its power-on state.  
**Reset Menu**†                      | Appears only when the DNIC-E’NET option is installed. |
| **Reset LocalTalk**†                | Resets the Local Talk network interface card to its power-on state.  
**Reset Menu**†                      | Appears only when the DNIC-L’TALK option is installed. |
| **Reset Menus**                     | Resets Control Panel menu options to their factory default settings.  
**Reset Menu**                       | The command does not reset the settings for Language, Defaults, Power Saver, and Passwords.  
**Reset Menu**                       | The printer remains offline, so you can work with other menus. |
| **Reset Printer**                   | Resets the printer to its power-on state.  
**Reset Menu**                       | This option is useful when you have printing problems. First, cancel the print job from the host. Then, invoke Reset Printer.  
**Reset Printer**                    | Cancel any print jobs being processed and clears all temporary fonts and macros.  
**Reset Printer**                    | Does not change the menu settings of any network option.  
**Reset Printer**                    | However, any current print jobs being processed by a network option will be discarded. |
| **Resolution**                      | Specifies dots per inch (dpi).  
**PCL Emulat Menu**                  | When Print Quality (page D-14) is set to TrueRes or Toner Saving, you cannot set Resolution to 1200x600.  
**PostScript Menu**                  |  
**600x600**‡                         | |
| **1200x600**                         | |
### Source Mapping

Maps the PCL paper source commands to the printer's paper trays.

Each paper source may be mapped to one of the following settings:

- Main Tray
- Front Tray
- Main-Front Tray
- Lower 1 Tray†
- Lower 2 Tray†
- Lower 1-Main†
- Lower 2-Main†
- Lower 1-Lower 2†
- Lower 1-Lower 2-Main†

† Appears only when one or two optional lower trays are installed.

### State Saving

Reserves memory for saving permanently downloaded fonts and macros, when the printer switches from using the PCL printer language to using the PostScript printer language.

- When set to Off, all “permanently” downloaded fonts and macros are cleared from memory when switching PDLs. They must be downloaded again when the printer switches back to PCL from PostScript.
- When set to On, “permanently” downloaded fonts and macros are stored in printer memory. You eliminate the time to download them again when the printer switches back to PCL.

Temporary fonts and macros are always cleared at the end of every print job.

State Saving requires 22 MB of memory if the PostScript option is installed. If the PostScript option is not installed, State Saving may be selected with 18 MB. This will prevent loss of downloaded PCL fonts and macros if applications change the setting of Resolution or Page Protection. Enabling State Saving can have an effect on printing speed. It is recommended that this option be enabled only with 22 MB of printer memory.

To review the PCL fonts in your printer, print a PCL Font List, as described on the next page.
Base Printer Fonts

Printing a PCL Font List

1. On the Control Panel, press Online \(\rightarrow\) to take the printer offline.

2. Press Menu \(\uparrow\), then Up \(\uparrow\) or Down \(\downarrow\) until you see:
   - Main Menu
   - Test Menu

3. Press Enter \(\rightarrow\) and the display changes to:
   - Test Menu
   - PCL Font List

4. Press Enter \(\rightarrow\) again to print the PCL Font List.

5. After the PCL Font List prints, press Online \(\rightarrow\) again to bring the printer online.
When the PostScript option is installed, there are 35 resident PostScript fonts available for printing PostScript jobs (as shown in Table E.2).

Table F.1 LN17/LN17ps specifications (continued)
Appendix G

LN17 Unique Printer Commands

Overview ................................................................. G-2
Paper Size ............................................................... G-3
Output Trays ............................................................. G-5
Raster Resolution .................................................... G-6
Overview

In addition to the standard PCL printer commands, Digital has added some unique settings for the LN17 printer in the following areas:

- Paper Size
  Values are added for the "#" parameter in the PCL Page Size command. See the section “Paper Size” (page G-3).

- Output Trays
  Additional values are added for the standard PCL destination command. See the section “Output Trays” (page G-5).

- Raster Resolution
  The PCL Raster Graphics Resolution command is expanded to allow 1200 dots per inch. See the section “Raster Resolution” (page G-6).
Paper Size

Table G.1 shows the paper sizes and corresponding paper trays supported by the LN17 printer. An “X” indicates support for a paper size in a specific tray. The escape sequence number refers to the “#” parameter in the Page Size command, Esc & l (lowercase letter l not the numeral 1) #A.

</tbody>
</table>

It is possible that an Envelope Feeder is removed while one of the PCL source mapping settings contains a sequence that includes the Envelope Feeder. To guard against this, the printer checks the source mapping...
settings and the presence of an Envelope Feeder each time the printer is powered on. If an Envelope Feeder is not attached, any mapping that contains “Envelope Feeder” will be changed to “Front.” If an Envelope Feeder is attached to the printer again, the Envelope Feeder will not be restored in any source mapping setting automatically. The Control Panel can be used to perform a “Reset Menus” or to select a new value for source mapping.
Output Trays

The output tray is selected with the standard PCL destination command, but with additional values given in Table G.2 to address all the possible LN17 output trays. Selection of the collator output value causes each copy of the output to use a different bin of the optional Mailbox/Collator, the first n bins for n copies (up to 10). The HP standard output value of 2 will be accepted for compatibility, and will use the standard output tray.

Note

PCL destination command sequences given in Table G.2 begin with \texttt{\textless Esc}\&l (lowercase letter l not the numeral 1).

The PCL Raster Graphics Resolution command (\texttt{<Esc>*t#R}) is expanded to allow 1200 dots per inch. It also accepts negative arguments to indicate a resolution that applies in the fast-scan dimension only, in order to accommodate 1200x600 resolution.

Environmental Specifications

FCC Compliance
Statement for
United States
Users

Class B:
This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

• Reorient or relocate the receiving antenna.
• Increase the separation between the equipment and receiver.
• Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
• Consult the dealer or an experienced radio/television technician for help.

Shielded cables must be used with this equipment to maintain compliance with FCC regulations.

Caution: Changes or modifications not expressly approved by Digital Equipment Corporation could void the user's authority to operate the equipment.
Compliance Statement for International Users

**Canadian EME Regulations:**
This digital apparatus does not exceed the Class B limits for radio noise emissions from digital apparatus set out in the radio interference regulations of the Canadian Department of Communications.

Cet appareil numérique est conforme aux limites d’émission de bruits radioélectriques pour les appareils de Classe B stipulées dans le Règlement sur le brouillage radioélectrique du Ministère des Communications du Canada.

**European EME Regulations:**
“The CE marking applied to this product symbolizes Digital Declaration of Conformity with the following applicable Directives of the European Union:

A full declaration, defining the relevant Directives and referenced standards can be obtained from your Digital representative.”
Environmental Specifications

Operational Safety

Your Digital equipment and supplies were designed and tested to meet strict safety requirements. These include safety agency examination, approval, and compliance with established environmental standards.

Attention to the following notes ensures the continued safe operation of your equipment.

**Always** connect the equipment to a properly grounded power source receptacle. If in doubt, have the receptacle checked by a qualified electrician.

**WARNING**: Improper connection of the equipment grounding conductor can result in electrical shock.

**Always** follow all warnings and instructions marked on, or supplied with, the equipment.

**Always** locate the equipment on a solid support surface with adequate strength for the weight of the machine.

**Always** exercise care in moving or relocating the equipment.

**Always** place the equipment in an area which provides adequate room area for ventilation and servicing.

**Always** use the materials and supplies specifically designed for your Digital equipment. Use of unsuitable materials may result in poor performance and, possibly, a hazardous situation.

**Never** use a ground adaptor plug to connect the equipment to a power source receptacle that lacks a ground connection terminal.

**Never** attempt any maintenance function that is not specifically described in this documentation.

**Never** obstruct ventilation openings. These are provided to prevent overheating.

**Never** install the equipment near a radiator or any other heat source.
Environmental Specifications

Never override or “cheat” electrical or mechanical interlock devices.

Never push objects of any kind into the ventilation openings.

Never operate the equipment if you notice unusual noises or odors. Disconnect the power cord from the power source receptacle and contact your dealer or Digital to correct the problem.

If you need any additional safety information concerning the equipment or materials, contact your dealer or Digital.

WARNING: Use of controls, adjustments, or performance of procedures other than those specified herein may result in a hazardous radiation exposure.

This product will produce less than 0.1 ppm ozone during normal operation. The ozone produced is dependent on copy volume and is heavier than air. Providing the proper environmental parameters as specified by Digital will ensure that concentration levels meet safe limits.
**Laser Safety**

**WARNING**: Use of controls or adjustments or performance of procedures other than those specified herein may result in hazardous light exposure.

This equipment complies with appropriate safety standards.

With specific regard to lasers, the equipment complies with laser product performance standards set by governmental, national, and international agencies as a Class 1 laser product. It does not emit hazardous light as the beam is totally enclosed during all phases of customer operation and maintenance.

When you perform various operator functions, laser danger labels may be visible. These labels are for your dealer or service technician and are placed on or near panels, or shields, which require a tool for removal. **THESE PANELS ARE NOT TO BE REMOVED BY USERS OF THE PRINTER. THERE ARE NO USER SERVICEABLE AREAS INSIDE THESE COVERS.**

---

**Laser Safety Warning for Finland and Sweden**

Luokitus on tehty standardin EN 60825 mukaisesti
Klassningen är gjord i enlighet met standarden EN 60 825

LUOKAN 1 LASERLAITE
KLASS 1 LASER APPARAT

VAROITUS!
Laitteen käyttäminen muulla kuin tässä käyttöohjeessa mainitulla tavalla saattaa altistaa käyttäjän turvallisuusluokan 1 ylittävälle näkymättömälle lasersäteilylle.

**WARNING!**
Om apparaten används på annat sätt än i denna bruksanvisning speciferats, kan användaren utsättas för osynlig laserstrålning, som överskrider gränsen för laserklass 1.
